- 24 hour on-call medical support will be available for on call subject to demand. This will initially be provided by a Field Emergency Medical Officer, and subsequently through a locum general practice service.
- Medical care is organised by Deputy State Health Coordinator. Deliverables include:
  - Primary care assessments;
  - Prescription provision;
  - 24 hour access to a general practitioner;
  - 24 hour access to nursing assessment.
- It is advisable that where possible, individuals who are in detention are linked to receive telehealth care from their normal general practice provider.

### Safety / mental health

If there are concerns about the safety or mental health of passengers, the process is as follows:

- The nurse will review via phone (or in person if required with appropriate PPE).
- If escalation is required, the nurse will contact the Anxiety Recovery Centre Victoria for psychosocial support.
- Mental health triage at RMH/the Alfred can be contacted as a back-up.
- If the person is acutely unwell or at serious risk, urgent ambulance should be arranged by calling 000.
- Daily welfare check phone calls should be implemented thereafter if not already implemented.

### Family violence (FV)

If there are concerns about family violence / the safety of women and children, the process is as follows:

- Case worker is called to review via phone initially or in person if required (with appropriate PPE).
- A separate room may need to be organised to facilitate the review away from the other family members.
- If deemed necessary, separate rooms should be organised to separate the family members.
- Case worker to review again as required.

### Alcohol and other drugs

If there are concerns about alcohol or other substance abuse or withdrawal:

- Consider nurse/medical review.
- Provide numbers for support services (listed below).
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.

## Appendix 7: End of Detention Notice

Public Health and Wellbeing Act 2008 (Vic)

Section 200

**Subject to the conditions below, this Notice is evidence that this detainee has completed their period of detention under a *Direction and Detention Notice* issued to reduce or eliminate the serious public health risk posed by COVID-19.**

### 1. Detention Notice

You have arrived in Victoria from overseas, on or after midnight on 28 March 2020 or 13 April 2020 and have been placed in detention, pursuant to a *Direction and Detention Notice* that you were provided on your arrival in Victoria (**Notice**).

### 2. Details of Detention Notice

Name of Detainee: \_\_\_\_\_

Date of Detainment and Detention Notice: \_\_\_\_\_

Place of Detention: \_\_\_\_\_

### 3. End of Detention Notice

In accordance with section 200(6) of the Public Health and Wellbeing Act 2008, I have reviewed your continued detention.

On review of the Notice, I have made the following findings:

- you will have served the required detention period by \_\_\_\_\_ [insert date]; and
- you have not started exhibiting any symptoms of COVID-19.

In consideration of the above circumstances, I have decided that your continued detention is not reasonably necessary to eliminate or reduce a serious risk to public health.

I advise that your detention pursuant to section 200(1)(a) of the *Public Health and Wellbeing Act 2008* (Vic) and the Notice will end on \_\_\_\_\_ [insert date] after you have been discharged by an Authorised Officer from \_\_\_\_\_ [insert place of detention] and have commenced transportation to your ordinary residence.

[If lives in Victoria] Although you are no longer to be detained pursuant to the Notice, you are required to comply with all directions currently in force in Victoria. This includes the Stay at Home Directions (No 2) (**Direction**), as amended from time to time. Pursuant to the Direction, you are required to travel directly to the premises where you ordinarily reside within Victoria, and remain there unless you are leaving for one of the reasons listed in the Direction.

[If lives outside Victoria] I note that you are ordinarily a resident in \_\_\_\_\_ [insert State or Territory] and that arrangements have been made for you to return home. While you remain in the State of Victoria, you are required to comply with all directions in operation in Victoria. Once you have returned home, you are required to comply with the Directions and/or Orders in place in your home jurisdiction, including any directions that may require you to isolate for a further 14 day period.

In the event that you start to experience symptoms of COVID-19, it is important that you self-isolate and, if necessary, contact your General Practitioner or local Public Health Unit.

#### 4. End of Detention Instructions

Your detention **does not end** until the time stated in paragraph 0 of this notice. Until that time, at which you will be discharged from detention, you must continue to abide by the requirements of your detention, as contained in the Notice.

You **must not** leave your hotel room until you have been collected by an Authorised Officer [OR] You **must not** leave your hotel room until \_\_\_\_\_ [insert time and date], at which time you are permitted to travel to the hotel lobby to meet an Authorised Officer to be discharged from detention.

When leaving detention you **must** adhere to the following safeguards:

- if provided to you, you must wear personal protective equipment;
- you must refrain, as far as possible, from touching communal surfaces, such as handrails, elevator buttons and door handles;
- you must where possible, engage in social distancing, maintaining a distance of 1.5 metres from other people; and
- upon leaving your hotel room, you must go straight to the foyer for discharge and then immediately after travel to your transportation and travel directly to your ordinary residence.

These steps are to ensure your protection, and reduce the risk of you becoming infected with COVID-19 by any persons detained in the hotel, or in the community, who may have COVID-19.

Until your detention has concluded, you must follow instructions from Authorised Officer/s and any other conditions set out.

#### 5. Offence and penalty

It is an offence under section 203 of the Act if you refuse or fail to comply with the directions set out in this notice, unless you have a reasonable excuse for refusing or failing to comply.

The current penalty for an individual is \$19,826.40.

\_\_\_\_\_ Signature of Authorised Officer

**Name of Authorised Officer:** \_\_\_\_\_

*As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.*

# Appendix 8: End of Detention Notice (confirmed case or respiratory illness symptoms)

*Public Health and Wellbeing Act 2008 (Vic)*

## Section 200

An Authorised Officer has decided to end your Direction and Detention Notice. This decision has been made following the mandatory review of your Direction and Detention Notice because you *[have returned a positive test for COVID-19]* or *[have started displaying symptoms of respiratory illness]*.

### 1. Detention Notice

You have arrived in Victoria from overseas, on or after midnight on 28 March 2020 or on or after midnight on 13 April 2020 and have been placed in detention, pursuant to a Direction and Detention Notice that you were provided on your arrival in Victoria (**Notice**).

### 2. Details of End of Detention Notice

Name of Detainee: \_\_\_\_\_

Date Notice Made: \_\_\_\_\_

Date Notice Expires: \_\_\_\_\_

Place of Detention: \_\_\_\_\_

Medical Facility: \_\_\_\_\_

*(if medical care is required)*

**COVID-19 Status or respiratory illness symptoms** [tick applicable]:

COVID-19 confirmed: \_\_\_\_\_  coughing

*[insert date of test]*

fever or temperature in excess of 37.5 degrees  sore throat

congestion, in either the nasal sinuses or lungs  body aches

runny nose  fatigue

### 3. End of Detention Notice

In accordance with section 200(6) of the Public Health and Wellbeing Act 2008, I have reviewed your continued detention.

On review of the Notice, I have noticed that you *[have been diagnosed with COVID-19]* or *[have exhibited the symptoms of respiratory illness, as outlined above at paragraph 2(8) ~~delete as applicable~~]*.

In consideration of the above, I do not believe that continued detention is reasonably necessary to eliminate or reduce a serious risk to public health because:

- a) *[if applicable]* You have been confirmed to have COVID-19 and will be required to self-isolate in accordance with the Isolation (Diagnosis) Direction, in a premises that is suitable for you to reside in, or a medical facility, until such a time you are notified that you no longer need to self-isolate and a clearance from isolation (self-isolation) is given;
- b) *[if applicable]* You are showing symptoms of respiratory illness and will be required to self-isolate in accordance with the Stay at Home Direction currently in force in Victoria and will need travel directly to your ordinary residence once you leave detention, and remain there unless you are permitted to leave for a reason specified in the Stay at Home Direction; and
- c) You are ordinarily a resident in Victoria.

Compliance with Directions made by the Deputy Chief Health Officer is required to reduce or eliminate the serious risk to public health posed by COVID-19. It is essential that you [self-isolate in accordance with the Isolation (Diagnosis) Direction until such time as you are notified that you no longer need to self-isolate and a clearance from self-isolation is given] OR [return to your ordinary residence and remain there unless you are permitted to leave for a reason specified in the Stay at Home Direction. Please monitor your symptoms and seek appropriate medical care if required]. *[delete as applicable]*.

The Notice is ended subject to the directions below under paragraph 4. Non-compliance with these directions is an offence.

#### 4. Conditions

- You will be transited from the hotel where you have been detained to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]* by an Authorised Officer. You may / will *[delete as appropriate]* be supervised during transit.
- While you are transiting to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]*, you must refrain from touching communal surfaces, as far as possible, such as door knobs, handrails, lift buttons etc.
- When you are transiting to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]*, you must, **at all times**, wear appropriate protective equipment to prevent the spread of COVID-19, if directed by the Authorised Officer.
- You must practice social distancing, and as far as possible, maintain a distance of 1.5 metres from all other people, including any Authorised Officer escorting you.
- When you are transiting to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]*, you must, **at all times**, comply with any direction given to you by any Authorised Officer escorting you.

## 5. Offence and penalty

It is an offence under section 203 of the Act if you refuse or fail to comply with the directions and requirements set out in this notice and/or the Isolation (Diagnosis) Direction *[if applicable]*, unless you have a reasonable excuse for refusing or failing to comply.

The current penalty for an individual is \$19,826.40.

\_\_\_\_\_ **Signature of Authorised Officer**

**Name of Authorised Officer:** \_\_\_\_\_

*As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.*

DRAFT

## Appendix 9: Guidance Note

**How to conclude a person's detention under a *Direction and Detention Notice* if they have served the required period of detention, become a confirmed case of COVID-19 or have symptoms of respiratory illness**

### **What do you have to do before you issue an End of Detention Notice?**

- if the person has served 14 days of detention you must decide how to administer the completion of that person's detention arrangements:
  - selecting a time for the person to attend a foyer after the 14 day period has concluded - it is recommended that this occur in small groups of people who are practicing appropriate social distancing and with sufficient time between groups to avoid crowds. This will ensure Authorised Officers can safely discharge each detainee
  - collecting a person from their hotel room after the 14 day period has concluded – this approach should be carefully administered to ensure Authorised Officers can safely discharge and escort each person to their transport
- if a person's detention is concluding because they have a confirmed case of COVID-19 or symptoms of respiratory illness they must be discharged when it is safe to do so – e.g. when other detained people are in their rooms, under full supervision etc.
- complete all sections of the Notice, including clearly documenting the reasons for the end of detention and the details recorded on the Direction and Detention Notice
- update all the registers and relevant records about the person's detention arrangements
- ensure the reference number is completed.

### **When should you issue an End of Detention Notice?**

- It is preferable that an End of Detention Notice be issued the day before a person's detention is set to conclude – this will give the person adequate time to prepare (e.g. to pack their belongings) and ensure the orderly discharge of large groups of people.
- A notice may be provided earlier but it creates a risk that a person may develop COVID-19 symptoms before the day the detention period must end.

### **What do you have to do when you issue an End of Detention Notice?**

When you issue an End of Detention Notice you must:

- explain the reason why detention has ceased and is no longer necessary to eliminate or reduce a serious risk to public health
- advise that person of the arrangements being made for their discharge from detention (e.g. at an allocated time at the foyer; when they are escorted from their room etc)
- notify they person that although they are no longer subject to detention when they are discharged and leave the premises of their detention, they are still subject to the directions which are in force in Victoria, including
  - if they are ordinarily resident in Victoria, they are required to return immediately to their ordinary residence, where they must remain, in accordance with the Stay at Home Directions (No 2)
  - if they have a confirmed case of COVID-19, they must isolate at home in accordance with the Isolation (Diagnosis) Direction

if the person is ordinarily resident outside of Victoria, notify the person of their travel arrangements and that they are to immediately travel to the airport to leave the State

# Appendix 10: Release Process 'Running Sheet'

## ***Evening prior to release***

- Exit Notices and associated materials prepared and dropped to hotel  
[Separate process to be developed on preparation of materials]
- Early hours releases transport booked (DJPR)
- Early hours releases documentation actioned by AO evening prior, including signing of exit checklist  
If issues or lack of exit time, contact: \_\_\_\_\_
- Notices for all other exiting detainees placed under doors (by Security)

## ***Day of release***

- Security door knocks early departures and they can leave
- Security door knocks exiting detainees at agreed time and brings people to exit location

## ***Release process***

- AO to sight ID and notice (notice clearly states both items must be available at release. All parties incl infants should have a notice)
- Confirmation of ID check noted on exit sheet
- If any issues, a blank End of Detention Notice can be filled out and signed by the AO
- AO to inform detainee of release (highlight conditions etc)
- Detainee signs exit sheet
- Welfare staff provide cab charge, facilitate transport etc

## Appendix 11 Register of permissions granted under 4(1) of the *Direction and Detention Notice*

Authorised officer: \_\_\_\_\_

| Ref No. | Date | Name of detained person | Reason | Time-Out | Time-In |
|---------|------|-------------------------|--------|----------|---------|

# Introduction

Mandatory quarantine for all people arriving from overseas into Victoria was introduced on 28 March 2020.

## Purpose

This plan outlines the policy for welfare and, medical, nursing and mental healthcare to individuals detained in mandatory quarantine.

## Scope

This plan will outline healthcare and welfare arrangements for people in mandatory quarantine as part of Operation Soteria.

This should be read in conjunction with the *COVID-19 Policy and Procedure – Mandatory Quarantine (Direction and Detention Notice)* and the *Operation Soteria – Operational Plan*.

## Audience

This document is intended for use by DHHS staff, all departments and organisations involved in Operation Soteria and the governing bodies described below.

## Governance and oversight

### Operation Soteria

A diagram indicating the governance of strategy / policy and operation of the mandatory quarantine program is described in **Appendix 1**.

### Roles and responsibilities

The Public Health Commander (through the Deputy Public Health Commander / delegate) will take responsibility for approving this plan.

The State Controller Health (through the Deputy State Controller Health) operating through the Emergency Operations Centre (EOC) has operational accountability.

The Deputy State Health Coordinator is responsible for:

- provision of healthcare to individuals in mandatory quarantine;
- provision of welfare to individuals in mandatory quarantine (delegated to a Director Health Protection and Emergency Management);
- ensuring the safety and wellbeing of individuals in mandatory quarantine and DHHS staff;
- ensuring a safe detention environment at all times.

### Co-ordination of medical care – Requirement for a DHHS Medical Lead

Due to the large number of individuals in mandatory quarantine, the high risk environment and length of time in detention, and the potentially complex needs of this cohort, a DHHS Medical Lead should be appointed to oversee medical care, including care through general practitioners and any nursing – including mental health nursing – care provided. The DHHS Medical Lead should have a healthcare background and have experience managing complex programmes for vulnerable populations. The DHHS Medical Lead should oversee the staffing of the various sites, reassess medical workforce needs, provide advice to staff, and ensure the minimum standards of care are being met.

The DHHS Medical Lead should identify any risks or issues and refer these to the Compliance Lead and State Control Centre Emergency Operations Centre for urgent action. They should be a senior point of contact in relation to medical and nursing care for the Compliance Lead, the State Emergency Controller / DHHS Commander, and the Public Health Commander and Deputy Public Health Commander for Physical Distancing.

DRAFT

## Standards for healthcare and welfare provision

### Meeting the needs of people in detention

The health and welfare of persons in detention is the highest priority and the main purpose of this plan. Mandatory detention removes some safeguards for health and welfare (such as free access to medical care of choice) and requires the highest standard of medical care at all times. This is in addition to the elevated risk of COVID-19 infection in returned travellers.

All reasonable requests should be facilitated where possible, to ensure that all people in detention are as comfortable as possible during their mandatory quarantine period.

### Physical examinations and telemedicine

When a quarantined individual requires medical assessment, they are entitled to receive the highest standard of medical care including a physical examination if indicated. It is not appropriate to defer or delay physical examination (if it is indicated), because the person is in mandatory quarantine. All requests for, and findings from physical examinations should be documented in the medical record, as described above. If a healthcare provider refuses to see a patient that they have been requested to see, the reason should be recorded in the notes.

Sufficient and appropriate PPE should be provided. If this is not available, it should be flagged immediately to the team leader/site manager to arrange for urgent stock to be delivered from another site. It may be possible to contact a nearby quarantine hotel and arrange for urgent PPE stock to be brought over to that hotel. If appropriate PPE is worn and used correctly, there should be no additional risk to the health care provider, or the patient (quarantined individual).

Any request for medical review should be carefully considered before determining whether telemedicine or physical review is most appropriate in that scenario. Phone consults or telemedicine should not be used as a substitute for direct clinical review if it is clinically indicated. If healthcare providers are concerned for their own safety, the case should be escalated to the DHHS Team Leader.

### Clinical handover

All clinical interactions must be documented, and important/ongoing issues handed over to the team covering the next shift. Nurses should hand over to the nurses on the next shift, and also the team leader so they are aware of the outstanding issues. GPs who review patients (over the phone or in person) must handover the outcome of the assessment and ongoing management plan to the nurses, and to the GPs on the next shift (or the clinical lead) if relevant. GPs contracted by Medi7 also have a Clinical Lead who is a Medi7 doctor acting as the coordinating point for these doctors. It would be advisable for a daily morning meeting to occur between the team leader, nursing cohort, medical officer and AO for every hotel. During this meeting, current issues that require escalation may be flagged to the team leader and escalated as appropriate. Documentation of the morning meeting and allocation of special tasks should be recorded in the DHHS notes.

### Triage and waiting times

Requests for medical care must be actioned within a specific time frame, in keeping with the acuity of the issue and the availability of services. Where staffing allows the doctor may see patients before the nurse, particularly if the request is deemed urgent.

- For physical medical issues requiring urgent medical review but not 000, the quarantined individual must be reviewed within 30 minutes by the hotel nurse (by contacting the hotel nurse direct line) who should review the patient in person and alert the on-call doctor to arrange urgent review if required. The GP should attend as soon as possible and within two hours.

- For matters requiring medical review (require assessment and management) that is not classified as urgent or emergency, the quarantined individual must be reviewed by a nurse (within four hours) first, then the on-call doctor must be contacted to arrange review depending on the acuity of the issue but within an eight hour period.
- For urgent mental health issues, the patient should be reviewed by the nurse or doctor-on-call within one hour. Where a quarantined individual may pose a risk of harm to themselves or others, a full risk assessment must be conducted by the doctor-on-call and escalation as per current policy – see safety and mental health section. **The mental health risk assessment form must be completed – see Appendix XX.**
- For all other issues, review by the on-call doctor should be arranged within 24 hours.
- For new prescriptions of regular medications, these should be arranged within a 24-hour turnaround period.
- For urgent prescriptions required same day, these should be arranged within 8 hours.

| Acuity of issue  | Time frame for response   |
|--|---|
| Minor health issue, non-urgent                                     | Phone review as soon as practicable<br>Nurse assessment within 8 hours<br>GP review (if required) within 24 hours |
| Non-urgent issue requiring review and management                   | Nurse review within 4 hours<br>GP review (if required) within 12 hours  |
| Urgent request by quarantined individual or mental health concerns | Nurse / mental health nurse review as soon as practicable (within 30 minutes)<br>GP review within 1 hour          |
| Emergency: serious health concern / life-threatening issue         | Immediate - call 000 ASAP   |

## Information and data management

There should be a minimum number of secure databases used for the storage and handling of confidential data on people in detention. This is to prevent fragmentation of records management and to reduce the risk of critical information not being available to DHHS, health or welfare staff providing for the health and welfare needs of people in detention.

The following information management systems are authorised for use in this program:

- The Public Health Event Surveillance System (PHESS);
- The healthcare and wellbeing database for mandatory quarantine (Dynamic CRM Database);
- Best Practice general practice software;
- Paper records (until transitioned to systems above).

The State Controller Health (or delegate) and Public Health Commander (or delegate) should be able to access any record within these systems to enable oversight of the health and welfare of people in detention.

The Department of Jobs Precincts and Regions (DJPR) will provide a list of people arriving internationally that populates PHESS and the Dynamic CRM Database. In turn, medical information is then stored in PHESS and Best Practice. Welfare and Compliance information is stored in the Dynamic CRM Database. Within 24 hours of arrival, both the Dynamic CRM Database and PHESS will contain a complete list of people in detention. PHESS will be the complete record for all medical and compliance records for a person who was in detention in Victoria as part of this program.

An Intelligence Cell will be introduced into the EOC to oversee reporting arrangements.

## Medical records

### Requirement for accessible medical records

Each quarantined individual must have a medical record accessible to all health care providers who require access to it and who are providing care. This record should capture the person's significant medical history, current medications, allergies and any other significant components of the medical history, where these have been revealed by the person in detention or discussed as part of medical care provided to the person during detention. Each time health care is requested **and** provided it must be documented in this record.

### Confidentiality and access to medical records

Any medical record created or held by DHHS for a person in detention is confidential and must only be accessed by persons coordinating and providing care for the person. These records should be stored securely and should not be accessed by anyone not providing care for the person. Specifically, these medical records must only be accessed or viewed by an AHPRA-registered health practitioner employed by DHHS to provide services to people in detention, an authorised officer, or the Public Health Commander or State Controller Health or their named delegate. Other persons involved in Operation Soteria should not access a medical record for an individual unless authorised on a named basis by the Public Health Commander (or delegate) or the State Controller Health (or delegate).

Accurate and comprehensive medical record keeping is essential for the health and safety of all individuals in mandatory quarantine and will ensure continuity of care for healthcare providers in subsequent shifts. If medical notes are recorded on paper, these should be stored securely and uploaded to the information management system as soon as is practicable and within 72 hours at most. If a doctor completes an assessment they must provide a written record of this to the nursing staff, either on paper or via email, if an electronic medical record system is not available.

Any medical records documents that are potentially contaminated with COVID (SARS-CoV-2) should be safely placed in plastic pockets to reduce the risk of infection transmission.

### Follow-up of results

It is the responsibility of the doctor who orders any test (COVID-19 or otherwise) to follow up on the result and notify the patient in a timely manner. If they are not able to do so, they must handover this task to the next doctor on-call, inform the nurse, and record this in the medical record. A list/spreadsheet of all individuals in mandatory quarantine who have had COVID-19 swabs should be sent to the department each day by the DHHS Team Leader. This will also serve as a safety net for the department to notify the patient if the treating doctor hasn't already.

If a detainee has been reviewed by their personal GP or has received a specialist consult via telehealth whilst detained, a letter from the GP/specialist must be provided within four hours following the review and documentation of this consult, outcome and plan should be transcribed into the Best Practice medical record. The name of the external reviewing doctor, time and contact details must also be documented into the detainee's DHHS notes by the hotel general practitioner. There must be clear communication and documentation regarding who will follow up and review any plans made by external clinicians.

# Provision of healthcare

## Medical care

### Access to regular general practitioners and specialists

A person in detention should be able to access care through their normal general practitioner and specialist through telehealth arrangements if they request it. If that is to occur, the person should indicate who their provider is and should provide the contact details of the general practitioner to the nursing lead / Team Leader for their time in detention, so that the general practitioner can act as an advocate for, and communicate with, the nursing team about the health of the person in detention.

### Provider of general practice services

General practitioners (GPs) are provided by Medi7 and Doctor Doctor. **[MORE DETAILS – point of contact, contact information, ABN]**

General practitioners (GPs) supplied by Medi7 and Doctor Doctor are providing 24-hour medical support to individuals in mandatory quarantine. GPs should be engaged at a ratio proportionate to the burden of healthcare problems across the hotels. **The directors of the contracting companies should teleconference with the Deputy State Health Coordinator twice weekly to review workload and vary this ratio if necessary.**

GPs attend in person from 8.00am to 6.00pm daily and revert to telehealth arrangements at night.

GPs are contactable via the nurses at each location. From 6pm on a weeknight, the nurse may contact the on-call GP. The on-call GP can provide telehealth services as required or attend the relevant hotel. Over weekends and on public holidays, a group of 8-10 deputising GPs is accessible to the on-site GPs should further assistance be required.

Medi7 is currently implementing a Best Practice medical record system for record-keeping. This will be uploaded to the DHHS Dynamic CRM Database.

### Clinical lead for general practice services

Medi7 has now appointed a clinical lead to oversee and coordinate the doctors working across all hotels participating in mandatory quarantine each day. The number of doctors per cluster of hotels is reviewed each morning before determining where each doctor is allocated. The Medi7 GPs can report issues to the clinical lead and seek advice and additional support. **The Medi7 clinical lead should update and report concerns to the Deputy State Health Coordinator.**

## Pathology and pharmacy services

### Pharmacy arrangements

Specific pharmacies in proximity to each hotel should be engaged to allow for prompt procurement of necessary medications and equipment for quarantined individuals. The address, contact details, and operational hours of the pharmacy for each hotel should be distributed to all staff working in that hotel and should be easily accessible. Each hotel should know which pharmacy can be used for urgent scripts out of hours, if their usual pharmacy cannot provide this service.

These pharmacies will accept prescriptions emailed by the resident's usual GP or made by the on-site GP and will have delivery arrangements in place to the relevant hotel.

These pharmacies have a billing arrangement in place with the department.

Should the existing complement of pharmacies prove incapable of meeting demand, extra pharmacies will be sought through engagement with the Pharmacy Guild.

## Prescriptions

Both prescribed and over-the-counter (OTC) medications can be ordered from the pharmacies described above. A record should be kept of all medications dispensed to quarantined individuals.

## Prescribing benzodiazepines

When prescribing benzodiazepines for anxiety in mandatory detention, GPs should exercise a high degree of caution. Care should be taken to ensure that benzodiazepines are not prescribed to individuals who are consuming alcohol, or who have other contraindications to these medications. These medications should only be required after careful history taking and assessment, to individuals who are regularly prescribed them. If they are required to be prescribed, no more than four (5mg) tablets should be prescribed at any time. Repeat prescriptions for benzodiazepines should not be given unless there is clear justification.

All new medication prescriptions for benzodiazepines, opioids, anxiolytics and antipsychotics must be discussed with the medical clinical lead by the prescribing general practitioner. A risk assessment should be performed by the prescribing general practitioner and medication changes should be documented and followed up by the prescribing doctor or handed over to the shift doctor next on call. General practitioners will take full responsibility and indemnity for all new prescriptions or medication changes.

## Pathology arrangements

### Swabs

Each site should have a twice-daily pathology courier pickup, transporting swabs taken from that site to VIDRL.

Currently, the delivery of swabs to each hotel and the arrangement of couriers is being undertaken by **REDACTED**. Email **REDACTED** or phone **REDACTED**

The marking requirements for each swab in order to ensure appropriate delivery of results and prioritisation of testing are as follows:

- The pathology request slip must be clearly marked as a hotel quarantine swab – this could be included in the clinical details section or at the top of the form (e.g. “Swab for a person in mandatory quarantine in hotel Crown Metropal, room 1234”);
- There must be three identifiers on every swab and pathology request (name, DOB, address);
- The address must be listed as the hotel where the person is being quarantined, not their usual home address;
- A phone number must be provided for every patient being swabbed;
- The name and phone number of the testing clinician **and** the responsible authorised officer for the hotel should be included.

### Provision of swab information to public health

Within each hotel there should be a spreadsheet, case list or other record of all quarantined individuals who have had COVID-19 testing carried out. This should record the following details as a minimum dataset for each swab taken:

- Testing doctor (and time)
- Name of quarantined individual tested
- Date of birth

- Usual address
- Contact number
- Email address
- Hotel address and room number
- Date of arrival
- Date of expected release from detention

All COVID-19 swabs taken should be documented in this spreadsheet, even if the person has already had swabs taken while in quarantine.

A daily record of all individuals in mandatory quarantine who have had swabs done and their details should be forwarded by the DHHS Team Leader to [publichealth.operations@dhhs.vic.gov.au](mailto:publichealth.operations@dhhs.vic.gov.au) each day.

### **Following up results**

It is the responsibility of the requesting medical practitioner to chase the result of the test and to notify the department (in addition to the testing laboratory). If the COVID-19 operations team are provided with this information (see next section), then they will be able to follow-up the result too.

### **Negative swab results**

Quarantined individuals who are suspected cases of COVID-19 may receive negative test results. This may lead to confusion and distress for the individual, as they may believe that they can now leave mandatory quarantine. In these situations, the nurse or doctor should explain to the person the implications of a negative swab, and reaffirm the public health need for the person to remain in mandatory quarantine.

### **Other pathology**

Other pathology requests (such as routine blood tests) should be deferred if possible until after the quarantine period. If other tests are required (as per the treating clinician – on-site doctor or person's own GP), this should be coordinated by the team leader in consultation with the GP/nurse. Equipment for taking bloods should be available at (or available to be transported to) the hotel. These specimens should be labelled as per the procedure for labelling COVID-19 swabs (same requirement for identifiers). The preferred provider for these types of pathology specimen is Melbourne Pathology.

## **Nursing care**

### **Minimum nursing requirement**

Nurses (including mental health nurses) are provided by Your Nursing Agency (YNA).

Nurses should be onsite at each hotel across the full 24 hour period. The required nursing complement should be continually reviewed and adapted according to need. This should be based on the number of individuals in quarantine at that site, the current workload and burden of healthcare and mental health issues expected and reported at that site, and the skillset and experiences of the nurses rostered at that site.

There should be one emergency department (ED) trained nurse available 24 hours, two general registered nurses during the day, one general registered nurse on overnight, and one mental health nurse on during the day. Where nurses report that their workload is not safe and that additional nursing support is required, staffing should be reviewed and adapted as necessary.

There should be a nurse coordinator or nurse team leader each day at each site, who is rostered on a longer shift (e.g. 12 hours). This is to ensure the other nurses are adequately managed and supported, to

ensure continuity of care and handover of outstanding tasks / concerns. In general, longer nursing shifts are preferable for this reason.

## Mental health care

### Mental health nurses

Mental health registered or enrolled nurses should be rostered to each hotel. The number and coverage should be increased at hotels where a growing mental health caseload is identified.

### Contacting a nurse at each site

A department-supplied mobile phone should be provided to all nurses at each site. Residents should be able to contact the nurse either directly by phone, or via the hotel concierge. The nurse phone numbers should be accessible on the hotel roster (accessible on Sharepoint). Where the nurse deems a quarantined person to have significant needs, significant requirement for medical care, or be at risk of mental health issues, they may give the quarantined individual their mobile number so that they can contact them directly if needed. Nurses may instigate daily, twice daily, or more frequent phone-calls to check up on the individual. This is in addition to any required welfare phone call. This provides an additional safety net for the health and welfare of quarantined individuals. If a person who normally frequently calls the nurse stops calling, the nurse for that individual needs to contact the individual to check on their health and welfare.

### Summary of available mental health services

Mental health services are available to people in mandatory quarantine through the following sources:

1. Calling Lifeline or Beyond Blue;
2. Nurse or mental health nurse on site for initial assessment;
3. Doctor on-call for non-urgent or urgent review;
4. NorthWestern Mental Health triage service (phone 1300 TRIAGE);
5. Referral to CART (Complex Assessment and Referral Team) [Method for calling / contact];
6. Calling 000 for emergency care;
7. Quarantined individuals can also contact their usual mental health provider or be assisted to contact that provider. This includes a psychologist, counsellor, psychiatrist or other provider. Care can then be provided via telehealth.

### Phone support services

Individuals in mandatory quarantine can contact Beyond Blue (1300 22 4636) and Lifeline (13 11 14) whilst in detention but must also be reviewed by the on-call doctor and a risk assessment performed if there are mental health concerns. The department's Mental Health and Drugs Branch is exploring further proactive mental health resources with Beyond Blue. [Update]

### Nurses and doctors

Nurses and doctors can review persons with mental health concerns upon request from the individual or from other sources for example if a concern is flagged by the welfare check, the authorised officer, security or by another resident. Mental state examination and risk assessment should be performed by the general practitioner allocated to the hotel.

The mental health nurse may assist with this process but the outcome of the risk assessment must be reviewed by the hotel general practitioner unless the detainee has received urgent CATT assessment or has required a transfer to a mental health unit or hospital. Psychiatric input regarding additions or

changes to existing antipsychotic and anxiolytic medications may be required and should be sought by the hotel general practitioner as indicated.

Refer to the Nursing section above for further information on mental health nursing presence in the hotels.

### **NorthWestern Mental Health triage service**

Melbourne Health's NorthWestern Mental Health triage service has been engaged from 28 March 2020 to provide specialist mental health support through direct or secondary consultation for persons in quarantine. Nurses and residents can contact **1300 TRIAGE (1300 874 243)** for specialist mental health support. The person making the initial referral should request the specialist priority line.

### **Complex Assessment and Referral Team**

CART is a new service set up by DHHS which can provide advice and support for mental health issues, drug and alcohol problems, family violence and other concerns. This service is currently staffed by two clinicians, one working 8am-2pm, and the other 2pm-8pm. If a full assessment is required CART does not currently have the capacity to complete this, and if more than phone support/advice is required, they will have to refer back to the nurse to arrange for assessment and further management from another source (e.g. NorthWestern Mental Health triage).

### **Mental health emergency**

If there is concern about a mental health emergency in a quarantined individual (i.e. acute suicidal ideation, thoughts of self-harm, or psychosis), and there is a delay in contacting the psychiatric triage team (**1300 TRIAGE**), the quarantined individual should be reviewed by the general practitioner as a matter of urgency and have a risk assessment completed within an hour.

The general practitioner should then assess the quarantined individual to determine if transfer to hospital via ambulance is required for urgent psychiatric assessment or if psychiatric advice can be obtained over the phone. If the quarantined individual is deemed as needing urgent psychiatric review and is not willing to be transferred for assessment, the doctor on call will need to decide if enacting provisions within the *Mental Health Act 2014* is required.

As for other medical emergencies, the authorised officer, reception or other parties do not need to be contacted before 000 is called. First responders should not be denied access to people in mandatory quarantine who make a 000 call.

### **Who can alert the welfare team to mental health concerns relating to a quarantined person?**

A quarantined person, authorised officer, nurse or doctor, security, Vic Police, family members, or anyone else who has a concern about the mental health or wellbeing of a quarantined person can raise this concern to the welfare team. All concerns should be escalated as necessary and documented/recorded in the database.

### **Escalating medical, nursing or mental health concerns**

See section on Escalation for situations requiring escalation.

### **Emergency services**

In the case of an emergency, a nurse, doctor or DHHS staff member can call 000. As soon as is practicable the person should inform the operator that the call is from a mandatory quarantine hotel and

the person may be at increased risk of infection with COVID-19, so that appropriate precautions can be taken. The current hotels in operation are in the catchment of three major hospitals:

- The Alfred;
- Royal Melbourne Hospital;
- Royal Children's Hospital.

As per other medical emergencies, the authorized officer, reception or other parties do not need to be contacted before 000 is called. First responders must not be denied access to people in mandatory quarantine who make a 000 call.

## Transport to/from hospital

### Transfer to hospital for people with suspected of confirmed COVID-19

- Passengers requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
- If the hospital transfer is non-urgent, the nurse, doctor or AO may assist in arranging the transfer.
- If the hospital transfer is urgent, call 000 to request ambulance and inform them that the passenger is a suspected (or confirmed) case of COVID-19.
- Contact the Admitting Officer at RCH/RMH/the Alfred and inform the hospital of patient and details.
- Staff should don full PPE (droplet and contact precautions) and the passenger must wear a single-use surgical mask if tolerated.
- All relevant staff including AO must be notified prior to the transfer (but this should not delay the provision of urgent medical assistance or the request for an ambulance if needed).
- AO must view appropriate authorisation.
- The passenger should be transferred on a trolley or bed from ambulance into the designated COVID-19 ambulance reception area.
- The patient should be managed under routine droplet and contact transmission-based precautions in a negative pressure room if available. The patient should wear a single-use surgical mask if leaving the isolation room. Further PPE considerations should be determined by the treating doctors.
- Ambulance services will list the hotels as an area of concern in case of independent calls and will ask on site staff to assess need for attendance in the case of low acuity calls.
- All residents who are: in high risk groups, unwell, breathless or hypoxic (O2 sats <95%) should be considered for hospital transfer.

### Unplanned transfers to hospital

Unplanned transfers occur via a phone call to Ambulance (AV) via 000 from the nurse, doctor, other staff member or quarantined person. The nurse or doctor then notifies an authorised officer of the transport. The authorised officer then provides an information sheet to stay with the patient throughout the journey. The patient is then treated and transported by AV or Non-Emergency Patient Transport (NEPT) to hospital.

### Planned transfers to hospital

Planned transfers occur via clinical staff at each hotel notifying the authorised officer of the transport and arranging transport via the most appropriate transport provider (e.g. AV, NEPT, Clinic Transport Service etc). The transport then occurs to the relevant location.

## Summary of hospital transfer

The following is a general overview of the transfer of a patient to hospital involving nurses, doctors, Authorised Officers (AOs), Ambulance Victoria (AV) and hospitals.

1. Nurse/doctor makes assessment that patient requires hospital care.
2. The AO grants permission for the individual to temporarily leave mandatory quarantine. Leave should be recorded on the business system or register.
3. All relevant staff including the AO must be notified prior to the transfer (however this should not delay the transfer if it is urgent/an emergency).
4. Patient is transferred to the appropriate hospital. Patients requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
5. If the hospital transfer is urgent call 000 to request an ambulance and inform them that the passenger is in mandatory quarantine. Let them know if the person is a suspected (or confirmed) case of COVID-19.
6. Contact the Emergency Department Admitting Officer at RCH/RMH/the Alfred to inform the hospital of patient and details.
7. Staff should don full PPE and the passenger must wear a single-use surgical mask if tolerated.
8. The passenger should be transferred on a trolley or bed from the ambulance into the designated COVID-19 ambulance reception area.
9. The patient should be managed under routine droplet and contact transmission-based precautions in a negative pressure room if available. The patient should wear a single-use surgical mask if leaving the isolation room.
10. Ambulance services will list the hotels as an area of concern in case of independent calls and will ask on site staff to assess need for attendance in the case of low acuity calls.
11. All residents who are in high risk groups, unwell, breathless or hypoxic ( $O_2$  sats <95%) should be considered for hospital transfer.
12. Assessment and diagnosis are made by the treating team at the hospital. A plan is made for either admission to the hospital or discharge back to the hotel (possibly for more appropriate medical care to be arranged at the hotel).
13. Prior to any movement of the patient out of the ED, a new plan or detention approval must be sought for either return to the hotel or admission to a different location in consultation with the compliance team (receiving hospital and compliance team).
14. Hospitals will need to contact the AO at the relevant hotel, then the AO team lead will advise Lead Executive Compliance to obtain any necessary approvals.

## Discharge from hospital

Discharge from hospital should be at the behest of the treating team. Refer to the current 'Guidelines for health services and general practitioners.'

Transfers from hospital back to the hotel are arranged by the hospital in liaison with the DHHS Team Leader.

## Anaphylaxis

Where individuals in mandatory quarantine have severe allergies and a history of anaphylaxis, this must be recorded and flagged in the welfare survey completed on the way to or at the hotel at the beginning of the stay. All individuals who require medications including antihistamines, corticosteroids and epipens should have an adequate supply of these. If they require an additional prescription for these this should be facilitated by the healthcare providers at the hotel and the nominated pharmacy as a matter of urgency.

If a person reports that they are having an anaphylactic reaction, 000 should be called immediately. This does not need to be escalated to an AO (or any other member of staff, medical or non-medical) first – the urgent ambulance should be called immediately by whoever is first aware of the situation. The health of the quarantined individual and the provision of urgent healthcare is the priority in any medical emergency. The authorised officer can be informed as soon as is practicable thereafter.

**Note: persons may call 000 themselves in the event of an emergency, they do not need to do this via an AO, a nurse or reception in an emergency.**

# Provision of welfare

## Airport screening process

At the airport, DHHS nurses and Department of Agriculture, Water and the Environment (DAWE) biosecurity officers will screen all passengers arriving from overseas for symptoms of COVID-19. Nurses will perform a temperature check on each passenger.

## Management of an unwell person at the airport

Any passengers who screen positive on this health check will trigger the DAWE biosecurity officer to contact the Human Biosecurity Officer (HBO) on-call for the department. After discussion with the HBO, if it is determined that the person meets the criteria for a suspected case of COVID-19, the following actions should take place:

- The HBO should organise an ambulance transfer to the Royal Melbourne Hospital (or Royal Children's Hospital) for testing and assessment.
- The AO at the airport should log the person as requiring mandatory quarantine at a specified hotel and then should follow-up with the hospital to update on whether the person has been found to be negative, so a transfer by (patient transfer/ambulance/ maxi taxi etc.) can be organised to bring the person to the assigned hotel.
- If the person is unwell and requires admission to hospital, the Compliance Lead should be informed.
- If the person is well enough to be discharged they should return to the hotel through an arrangement by the AO.
- If they are a confirmed case they should be placed on a COVID-19 floor. If they are not, they can be placed in a general part of the hotel.

## Transfer of uncooperative individuals

It is recommended that a separate mode of transport to the hotel is provided for a person who is uncooperative/non-compliant. Ensure appropriate safety measures are taken (e.g. child locks on doors, a safety briefing for drivers etc.).

If a person refuses testing for COVID-19 at a hospital and they are well enough to return to the hotel, they should be transported back to the hotel and treated as if they are COVID-19 positive (i.e. they must be situated on the COVID floor of the hotel and the necessary precautions taken). Every effort should be made to encourage them to get tested before this happens. However, they cannot be forcibly tested.

If a person refuses testing and treatment at a hospital and is too unwell to be released from hospital, a Human Biosecurity Control Order (HBCO) may need to be considered.

## Assessment at the hotel

All quarantined individuals will be given a survey to complete on the way to or at the hotel. This will include questions about past medical history, mental health history, allergies, medications, next of kin/emergency contact, dietary requirements, and other important health and welfare needs. A doctor and nurse will be available on site to urgently review anyone who reports illness or an urgent medical need on arrival at the hotel. Nurses will review the surveys and contact all individuals who are identified as having significant health needs, as soon as is practicable. After initial phone contact is made, further assessment/management can be organised as needed.

## Initial information on options for accommodation

### Policy on separation of people in travelling parties to promote effective quarantine

There are a number of options for people – such a couple or family – for rooms to promote effective quarantine. Because a person needs to commence a further 14 days of quarantine when a person within a party or group is identified as positive for COVID-19, there should be an option to separate people – if they consent – at various points in the quarantine journey.

#### Option 1 – Parties stay together

A couple or family stay together and share a suite or room. If a person becomes positive, an extension of quarantine will be required on a tailored basis for the other persons.

#### Option 2 – Parties separate from the outset

A couple or family are separated from the outset. If a person becomes positive, the other parties do not need to recommence 14 days of quarantine.

#### Option 3 – Parties are separated once one person becomes positive

A couple or family separate into different rooms (with no contact thereafter) after a person becomes positive for COVID-19. The non-infected persons then start a new 14 day quarantine period, which is served at home once they complete the mandatory 14 day period in the hotel.

#### Option 4 – Parties stay together after one person becomes positive

The parties stay together. At the end of the 14 day period, they both leave to home isolation, and the non-infected persons commence a further 14 day quarantine period, as long as they separate in the house to which they go.

### Communication of these options to people in mandatory quarantine

The DHHS Team Leader should communicate these options to people at booking, with the default option being that parties stay together unless they indicate a preference to separate from the outset.

## Assessment during detention

Medical care should be available 24 hours a day to individuals in mandatory quarantine.

The need for medical care can be identified through the following channels:

- Via the daily welfare check
- By the person contacting the concierge or nurse directly
- Nurse phone call to the individual
- The 1800 government services number (DJPR), the physical distancing hotline, the COVID hotline, or any other DHHS phone line
- Family members directly contacting the hotel/team/COVID quarantine inbox

Individuals in mandatory quarantine should be supported to contact their regular health care provider by phone or telemedicine if appropriate. In these instances, the healthcare provider should be provided with the contact details of the hotel nurse or GP so that the outcome of the assessment or management plan can be communicated with the medical team on site.

## Tiers of risk for people in mandatory quarantine for welfare checks

Individuals in mandatory quarantine will be triaged into three tiers of risk. The type of welfare check will depend on the tier the person falls into.

The following table is an initial framework for triaging the type and frequency of welfare check required:

**Table 1: Risk Characterisation for Welfare Checks**

| Risk Tier | Risk factors   | Welfare check type              |
|-----------|--|---------------------------------|
| Tier 1    | Residents with suspected or confirmed COVID-19<br>Families with children < 18 years<br>Passengers aged > 65 years<br>Aboriginal and Torres Strait Islander peoples<br>Residents with underlying comorbidities (e.g. respiratory or cardiac conditions)<br>Residents with a history of mental illness | Daily phone call                |
| Tier 2    | Those who indicate they require a phone call but do not have any other risk factors.<br>Residents who are by themselves.   | Phone call every second day     |
| Tier 3    | Low risk – everyone else.  | Daily text message (via Whispr) |

For phone calls (tier 1 and tier 2), translators must be available as needed. Language requirements should be recorded on arrival at the hotel and provisions made as required.

Automated text messages are sent to all passengers in Tier 3 via Whispr.

Individuals may be moved between risk tiers throughout their quarantine period as need dictates.

## Requirement for a welfare check

As part of the welfare check process, quarantined individuals should be provided with a satisfaction survey (available at **Appendix XX**) to complete each week. This satisfaction survey is more comprehensive than the regular daily welfare check. Any concerns raised on the survey should be escalated to the DHHS Team Leader for action.

Each individual in mandatory quarantine should receive a welfare check each day by a DHHS welfare officer (employee or contractor). A welfare check will allow people in detention to be assessed for medical and social issues. Concerns can be flagged and responded to. These issues include but are not limited to health, mental health, safety and family violence concerns. Referrals to the nurse, social supports, mental health and other services can be made as a result.

Welfare checks are made from the DHHS welfare call centre by a DHHS welfare officer – the **script for these checks is in Appendix XX**.

## Smoking

Smoking is not permitted within the hotel rooms. The following actions should occur:

- Nicotine Replacement Therapy should be promoted strongly for smokers;
- Smoking restrictions should remain in relation to the room;

- Only where absolutely necessary, and in exceptional circumstances, a person in mandatory quarantine could be granted permission to leave their room under specific circumstances, where public health risk is managed:
  - The Authorised Officer is aware and grants permission;
  - They are accompanied by security, who are provided PPE to wear;
  - They are instructed to – and follow the instruction – not to touch surfaces en-route to the smoking area and coming back;
  - They return immediately to their hotel room.
- Smokers should be provided with the Quitline number to access telephone counselling - 13 78 48
- People can also contact their regular general practitioner via telehealth for support.

## Fresh air and exercise

Individuals in quarantine should have access to fresh air where feasible.

- If the room has a balcony, ensure the residents can access it for fresh air.
- Advise residents to open windows/balconies where possible for fresh air and ventilation.
- If it is possible for residents to go outside to take some exercise for organised/supervised short periods of time, this should be facilitated where possible. Residents should ensure physical distancing is practised during this period. Only well residents from the same room should be able to go out to exercise at the same time.

Exercise is important for physical and mental health, particularly in the mandatory quarantine environment. Requests for exercise equipment / yoga mats should be facilitated where possible, but equipment should be thoroughly cleaned and disinfected after use. Resources for exercise routines and yoga/meditation should ideally be provided to individuals in mandatory quarantine upon request.

## Alcohol and drugs

Alcohol is permitted within hotels. Excessive alcohol consumption should be discouraged and should not be facilitated.

If there are concerns about alcohol or other substance abuse or withdrawal:

- Request nurse or medical review.
- Provide numbers for support services.
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.
- If there are concerns about acute alcohol withdrawal, confusion or mental state/mental illness, escalate for urgent medical review (consider calling 000).

**Note:** Alcohol should not be provided to persons who are under 18 years of age (including in the hotel room minibar).

## Nutrition and food safety (including allergies)

Individuals in quarantine should be provided with a well-balanced and plentiful diet, with options provided for those with specific dietary requirements.

- Ensure a well-balanced diet with options provided for those with specific dietary requirements.
- Ensure access to essentials within the room (e.g. snacks, tea and coffee) to limit the amount of interactions/contact required with hotel staff.
- Ensure access to additional food if required.

- Ensure that food allergies are recorded and communicated to the catering providers.

If there are substantial concerns that someone is not eating, this should be flagged with the medical team, and appropriate review/referral arranged (e.g. for mental health assessment).

### Food allergies

Individuals in mandatory quarantine should report all allergies in their initial health and welfare survey, and indicate if they are severe, have a history of anaphylaxis, or have been prescribed Epipens. This must be filled out by every quarantined individual. If no allergies are reported, they should record “no known allergies”. Dietary requirements should be carefully recorded and communicated to the catering providers. It is the responsibility of the welfare team to ensure that food safety arrangements are in place and that this information is communicated to the catering staff.

### Food safety process

Food safety questionnaires (along with the welfare questionnaire) should be distributed to individuals at the airport. Individual with specific dietary requirements (who are eligible for this process) should be contacted and advised of the process for self-organising suitable meals (through uber eats and by submitting a claim following their stay). Uber Eats Drivers should drop meals off at the hotel, and security staff should deliver the meals directly to the requestors' rooms. The Uber Eats Driver/Rider should not drop the delivery to the person's room directly.

Please refer to the following documents for further details:

- Process for people with food allergies
- Food safety questionnaire

## Care packages

A public health risk assessment has been conducted that indicates that care packages, such as food or toys, can be delivered for provision to people in mandatory quarantine. The reason for quarantine is to prevent risk of COVID-19 transmission from people in detention to other parties and does not mean a person needs to be prevented from receiving packages.

The care package should be provided to the hotel reception or other party for conveyance to the person in mandatory quarantine and should not be directly handed to the person in quarantine by the person gifting the care package. Ensuring the package passes to the person in quarantine without misdirection or tampering is essential. There is no public health reason for an inspection of any care package.

## Safety and family violence

If there are concerns about family violence / the safety of women and children the following should occur:

- Arrange for separate rooms for the person to be assessed and access phone support services (separate rooms may also be indicated for the remainder of the quarantine period)
- Refer to CART
- Refer to phone support services
- Engage case worker to contact person and make an assessment

## Social and communications

- All residents should have access to **free** wifi/internet.
- All residents should have access to entertainment such as television and streaming services (e.g. Netflix).
- All residents should have access to communications so that they can keep in regular contact with family and friends throughout the quarantine period.

- Toys and equipment should be provided for small children if possible.

## Negative permission/exemption outcomes

When a person submits a request for release from detention (temporary or permanent) that is denied/declined, a CART team support worker should be present (on the phone) to provide support (if the person consents to this, and if CART are already working with the person).

- The CART team can support the person before and after the exemption discussion with the doctor which is a separate discussion, in anticipation of some emotional distress upon hearing the outcome.
- The CART worker can help the person gain insight into the public health risk, understand the information they are receiving, and provide insight into what they can and can't do whilst they remain a public health risk.
- This will also inform the doctor/nurse and CART team of further risk management and support required for the person going forth.

## Assessment in preparation for exit

All persons departing mandatory quarantine will be offered a health check with a nurse 24-48 hours prior to exiting. This health check is voluntary. This will consist of questions about symptoms of COVID-19 and a temperature screening.

If a person screens positive on the health check:

- They will not be detained longer than the 14 day mandatory quarantine period
- A swab will be sent and they will be informed that they need to self-isolate after exiting, until the result of the swab is known
- If they do not have appropriate accommodation to self-isolate after release, they will be assisted to find such accommodation

If a person screens negative on the health check, no further action will be taken.

# Infection control and hygiene

## COVID floors/hotels

Each hotel should have a COVID-19 positive floor or area (a **"RED ZONE"**). Any person who is a confirmed case should be relocated to this area of the hotel when the test result is known. Appropriate signage, PPE and other consumables should be available at the entrance to this area of the hotel. Where there are large numbers of confirmed cases arriving on a flight, a COVID hotel may be considered. Where the infrastructure allows, suspected cases may also be moved to an area of the hotel away from well individuals.

## Personal protective equipment

A supply of P2/N95 masks and gowns should be maintained, in addition to single-use face masks and gowns. PPE stocks should be checked regularly by the team leader/ manager, and urgently requested if needed. Regular stocktake should be undertaken to pre-empt additional orders.

PPE should be available in the donning section of the hotel. Biohazard bags for waste disposal, and hand hygiene stations, should be available at the doffing section of the hotel.

PPE protocols should be available to all staff working in the hotels, so that there is clear instruction on what type of PPE to wear and in what circumstances, how to don and doff it, and how to dispose of it.

## Laundry

Staff may wear PPE when handling dirty laundry. Laundry should be washed on the highest possible setting and thoroughly dried before use. Staff should not overly handle the linen – it should be put straight into the washing machines. Staff should follow hand hygiene procedures after handling dirty linen.

## Cleaning

Though not directly medical care, all quarantined individuals have the right to a safe and comfortable room and environment. Quarantined individuals may not be able to upkeep their rooms for various reasons, which may affect their physical and mental health. If cleaning cannot be regularly provided, all efforts should be made to assist the quarantined individual with cleaning their room. In rare instances the quarantined individual may need to be moved out of the room, and staff don full PPE to provide a rapid cleaning of the room. This should only occur in rare instances where the quarantined individual is not capable of doing so themselves. Any persons for whom there is a concern about room hygiene and safety should be flagged to the team leader.

Please refer to the department document 'Cleaning and disinfecting to reduce COVID-19 transmission'.

Housekeeping services will not be provided routinely to residents. Fresh linen, towels and additional amenities can be left outside of rooms for residents to then collect. Biohazard bags can be left for residents to place dirty linen in and to leave outside their rooms for collection. Terminal cleaning is required on vacation of each room. Rooms that have been vacated will not be repurposed during the quarantine period.

# COVID-19 in people in mandatory quarantine

## Actions for confirmed cases of COVID-19 in people in mandatory detention

### Overall actions

The following actions should be taken:

- Residents with confirmed COVID-19 should be accommodated / cohorted in a separate section/floor of the hotel, away from the non-COVID-19 infected passengers → the **RED ZONE**.
- A designated COVID-19 hotel should be available when there are large numbers of cases coming off of flights (e.g. high risk repatriation flights with a high burden of suspected or confirmed COVID-19).

### Personal protective equipment (PPE)

Staff who engage with monitoring or assisting persons in mandatory detention in person:

1. Apply standard infection prevention and control precautions at all times:
  - a. maintain 1.5 metre distance
  - b. wash your hands or use anti-bacterial agents frequently
  - c. avoid touching your face.
2. Every situation requires a risk assessment that considers the context and client and actions required.

3. If you are not able to maintain a 1.5 metre distance and the person has symptoms (for example coughing) or is known to be a COVID-19 case use:
  - a. fluid-resistant surgical mask (replace when moist or wet)
  - b. eye protection
  - c. disposable gloves.
4. If you need to be in a confined space (<1.5 metre) with a known COVID-19 case for more than 15 minutes, wear a single use facemask, eye protection and gloves.

### Current infectious cases

- In the situation that an arriving passenger is a current infectious case of COVID-19, they will still be handed the detention notice and will be placed in mandatory quarantine.
- They will be given a single use face mask to wear and will be kept separate from the other passengers where possible.
- At the hotel, they will be asked to provide confirmation of their diagnosis. If there is any doubt surrounding the certainty of the diagnosis of COVID-19, they may be tested again.

### Recovered cases

- In the situation that an individual states that they are a confirmed case of COVID-19 and have recovered from the infection, they will still be handed the detention notice and placed in mandatory quarantine.
- The onus on them is to provide the evidence that they have a confirmed case of COVID-19 and the required amount of time has passed such that they are no longer considered infectious.
- The department will decide on a case-by-case basis whether evidence from other sources (from testing done overseas) can be considered sufficient proof to inform clinical and public health decision-making.
- If they meet the criteria for release from isolation (see below) and the testing and medical reports provided are considered sufficient by the department, they may be considered for release from detention.
- They will still be handed the detention notice until this can be verified and the request has been approved.

Note – there are no automatic exemptions for persons who are recovered cases. These requests need to be assessed on a case-by-case situation.

## Release from isolation

### Criteria for release from isolation

Confirmed cases of COVID-19 will be considered for release from mandatory quarantine, once they meet the department's criteria for release from isolation of a confirmed case:

- the person has been afebrile for the previous 72 hours, and
- at least **ten days** have elapsed after the onset of the acute illness, and
- there has been a noted improvement in symptoms, and
- a risk assessment has been conducted by the department and deemed no further criteria are needed

Clearance testing is not required for release from isolation, either in the home or in mandatory quarantine.

## Process for release from isolation

As per the DHHS guidelines for health services and general practitioners, the department will determine when a confirmed case no longer requires to be isolated in hospital or in their own home, in consultation with the treating clinician.

- In this case, the treating clinician is considered the medical practitioner looking after the cases in that hotel.
- Every confirmed case that is diagnosed in Victoria is notified to the department, and assigned a case and contact officer (CCO), regardless of whether they are diagnosed in detention or outside of detention. Every confirmed case receives daily contact from the case and contact team.
- The CCO will advise when it is appropriate for consideration for release from isolation, and will issue a clearance certificate (via email) to the case when they meet the criteria for release from isolation.

Nurses looking after confirmed cases in detention should temperature check and review symptoms of confirmed cases daily. The date of acute illness onset should be clearly documented in their records.

If a confirmed case is due for release from mandatory quarantine but does not meet the department's criteria for release from isolation, they will not be detained longer than the 14-day quarantine period. They will be released from detention at the agreed time, but will be required to self-isolate at home or at other accommodation until they meet the required criteria. In this case they will be subject to the self-isolation direction. They will be given a single-use face mask to wear when checking-out from the hotel and in transit to their next destination. They will be provided with a 'confirmed case' information sheet.

## Exit planning for individuals with confirmed COVID-19

### Non-emergency ambulance transport

When a confirmed case of COVID-19 who is considered still infectious but is stable is assessed as appropriate for transition to isolation in their home, Ambulance Victoria will be requested by the Operational lead for mandatory quarantine to provide a non-emergency patient transport for that person to a destination in Victoria that is the assessed appropriate home isolation location

If there are multiple persons to be transitioned to home isolation on the same day, subject to compliance-related logistics being able to be handled and any privacy considerations being met, it is permissible for two or more potentially infectious confirmed cases of COVID-19 to be transported together in one NEPT, i.e. to cohort confirmed cases

### Room sharing - COVID incongruent couples

In instances where one person in a room share situation is a confirmed case and one person is COVID-19 negative, the confirmed case should self-isolate in a separate room away from the person who does not have COVID-19. The quarantine period (but not the mandatory detention period) for the COVID-negative person starts from their last contact with the confirmed case while the confirmed case is infectious. This may mean that they need to self-isolate for an additional number of days after the mandatory detention period ends, but they may do this in their own homes or in alternate accommodation, not in detention.

### Room sharing - well persons

In instances where two or more well people who are not suspected or confirmed cases of COVID-19 wish to share a room in advance of check-in at the hotel, this can be facilitated.

If this request is made after the persons have been initially been in separate rooms for a period of time, they should be informed that this may increase their risk of infection with COVID-19 if the other person is incubating the infection, and that COVID-19 infection may result in serious illness and death in some

cases. If the persons still insist, then it must be documented in the database that the risks have been discussed with them (e.g. by a nurse), before facilitating this request.

## Exit arrangements

The following table documents the exit management plans for quarantined individuals in different scenarios.

| Scenario   | Exit plan  |
|--|--|
| Well person who has served 14 days of quarantine   | <ul style="list-style-type: none"> <li>• Can leave – gets end of detention notice (universal version).</li> </ul>  |
| Confirmed case of COVID-19 who has met criteria for release from isolation (i.e. is declared no longer infectious)                                     | <ul style="list-style-type: none"> <li>• Can leave – must not be prevented from leaving if the AO is aware they are cleared and the person demands to leave – they are non-infectious and therefore not a public health risk.</li> <li>• Gets clearance from isolation letter from PHC (as per Isolation (Diagnosis) Direction).</li> </ul>  |
| Confirmed case of COVID-19 who is still potentially infectious and has been in detention less than 14 days   | <ul style="list-style-type: none"> <li>• Must stay in detention.</li> </ul>  |
| Confirmed case of COVID-19 who is still potentially infectious but has reached the end of their 14 day detention period                                | <ul style="list-style-type: none"> <li>• Can leave detention but is now subject to the Isolation (Diagnosis) Direction.</li> <li>• Safe travel should be arranged by EOC to place of home isolation in Victoria (mask, stay separate, go straight to home; but preferred travel by non-emergency patient transport with PPE'd ambulance officers)</li> <li>• Not permitted to travel interstate / not permitted to fly domestically but no detention order needed to prevent that (in keeping with all other confirmed cases)</li> <li>• If no place to isolate, DHHS should keep person in hotel voluntarily to reduce risk until cleared, or until safe home isolation environment identified</li> </ul> |
| Well close contact of a confirmed case of COVID-19 (i.e. room-mate at hotel), where the room-mate has reached the end of their 14 day detention period | <ul style="list-style-type: none"> <li>• Case and Contact Sector to do assessment, assign a new 14 day period (from date of last contact with infectious case) and issue a requirement to quarantine until that 14 days ends – factsheet, lodge new date in PHESS, reverting person to effective close contact status</li> <li>• No detention order required, and no legal order preventing flying, but must be advised by CCM Sector not to fly and needs to quarantine</li> <li>• If lives interstate, DHHS could offer hotel if person would otherwise be homeless.</li> </ul>  |
| Symptomatic suspected case of COVID-19 who has reached the end of their 14 day detention period.   | <ul style="list-style-type: none"> <li>• Allowed to leave detention safely (mask, separate; ideally NEPT transport to home isolation).</li> <li>• DHHS Case and Contact Management to follow-up result to convey (as DHHS oversaw this testing so is obliged to follow-through).</li> </ul>  |

DRAFT

# Reporting / escalating concerns

## Principles

- Decisions about medical care should be left to the nurses and doctors and should not be determined by any other staff.
- In any emergency situation, the priority is to call 000 before notifying any other managing or governing figure.
- If there is any doubt over whether an issue or concern should be escalated to senior management, escalate the concern.

## Clinical escalation

This is described in **Appendix 2**.

## Escalation for mental health concerns

### Chain of escalation for mental health concerns and issues

The following table indicates the chain of escalation for concerns about the mental health of people in mandatory quarantine.

| Situation   | Responded to by  | Escalated to                              | Reported to  |
|---|--|---|--|
| Non-urgent mental health concern                              | Nurse or GP<br>Regular healthcare provider by telemedicine   | Mental health nurse<br>Psychiatric triage | Medical lead<br>General practitioner   |
| Repeated mental health concerns / acute mental health concern | Mental health nurse or GP, urgent review<br>Psychiatric triage urgent review<br>Daily physical welfare review thereafter | Ongoing mental health nurse management    | Welfare lead<br>Medical lead<br>Compliance lead  |
| Risk of self-harm / serious mental health concerns            | Immediately phone 000 → Emergency Department<br>Call GP/nurse to attend urgently   | Emergency inpatient tertiary care         | Welfare lead<br>Team leader<br>Medical lead<br>Compliance lead<br>Deputy Public Health Commander |

### Specific events to escalate

The following mental health-related events or situations should lead to an escalation to the Deputy Commander - Welfare at EOC who will also notify the Deputy Public Health Commander:

- A person identified as high risk for mental health concerns due to a past history, medication or recent bereavement;
- Detainees with suicide or homicide risk or recent psychosis;
- Any instances where physical or chemical restraint have been required.

## Escalation for medical reasons

An escalation flowchart is at **Appendix 2**.

### Nurse or doctor to escalate

In the following circumstances, the nurse / general practitioner should call the DHHS Team Leader:

- There is any practical issue arising from the medical consultation that needs the assistance of DHHS;
- A patient needs to access an alternative medical or welfare service such as mental health nursing, a medical specialist or acute hospital care;
- A patient needs to be admitted to hospital in an emergency;
- A patient has suffered any form of life-threatening injury or health event;
- A patient has died.

### DHHS Team Leader to escalate

The following concerns or events must be escalated by the DHHS Team Leader to the Deputy Commander - Welfare at EOC within one hour, who will also notify the Deputy Public Health Commander within two hours:

- A person identified as high risk for mental health concerns due to a past history, medication or recent bereavement;
- Detainees with suicide or homicide risk or recent psychosis;
- Any instances where physical or chemical restraint have been required;
- A serious act of non-compliance;
- A new COVID-19 diagnosis;
- An acute medical deterioration;
- Any hospital admission or emergency transfer to hospital;
- A serious risk to the health and safety of a person in mandatory quarantine (or a staff member);
- Serious illness/harm/injury (including assault) to a person in mandatory quarantine;
- A severe allergic reaction (anaphylaxis);
- A death.
- An unauthorised absence from mandatory detention (a missing person)
- A fire or other emergency in a hotel;
- A potential outbreak of COVID-19 or another infectious disease.

## Daily health and welfare report to Public Health Commander

A daily health and welfare report should be provided to the Deputy Public Health Commander for Physical Distancing. This is to ensure oversight and accountability for the mandatory quarantine process. This report should include but is not limited to the following:

- Total number of people in mandatory detention
- Total number of confirmed COVID-19 cases (cumulative and new)
- Total number requesting exemptions to leave mandatory quarantine (temporary and permanent)
- The number of persons in mandatory detention receiving:
  - A nurse review
  - A mental health assessment
  - A GP review
  - Referral to hospital

- A 000 call
- The number of persons awaiting:
  - A mental health assessment
  - A GP review
- The number of persons in the following groups:
  - Significant psychiatric history - mild/moderate/severe mental health issues (as per the risk stratification)
  - Serious/life-threatening medical conditions (e.g. anaphylaxis, stage 4 cancer)
  - Age < 16 years or > 70 years
  - Pregnant women
- The number of calls from the hotels to:
  - 000
  - VicPol
  - Other DHHS phone lines
- The number of risk incidents logged in the database.
- Other major concerns flagged.

## Audit

### Healthcare audit

Medical care provided by doctors and nurses contracted by DHHS will be audited regularly. This should be reported to the EOC Commander and Deputy Public Health Commander. The audit process may consist of, but is not limited to, the following:

- Assessing waiting times for delivery of care;
- Record-keeping and review of medical records;
- Medical care satisfaction surveys;
- Number of repeat requests for medical care/escalation;
- Number of risks reported;
- Feedback from authorised officers and other organisations involved/staff.

### Welfare audit

Audit of welfare procedures should be performed by the Welfare Lead at the EOC on a regular basis. The audit process may consist of:

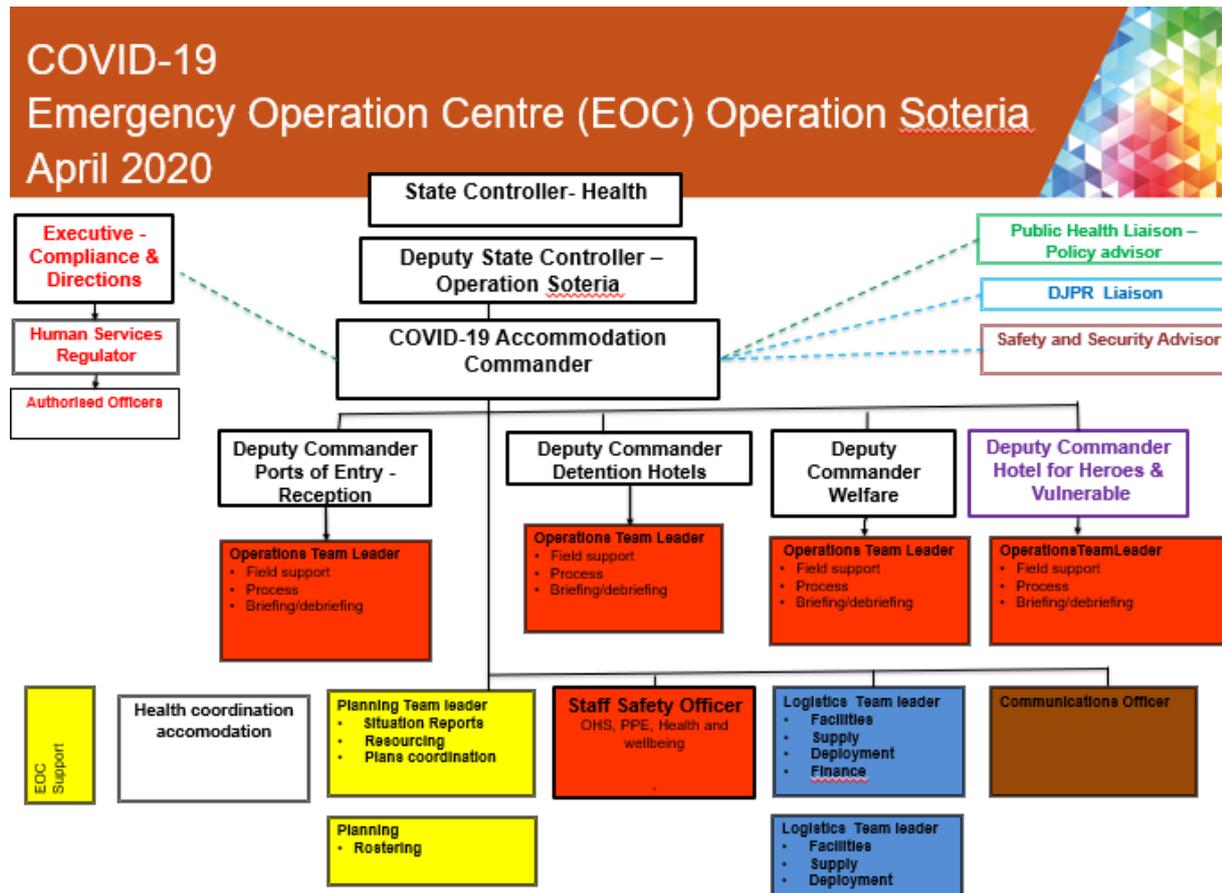

- Review of weekly satisfaction surveys;
- Feedback from staff;
- Audit of welfare check calls (review of a sample of recorded calls).

## Appendices

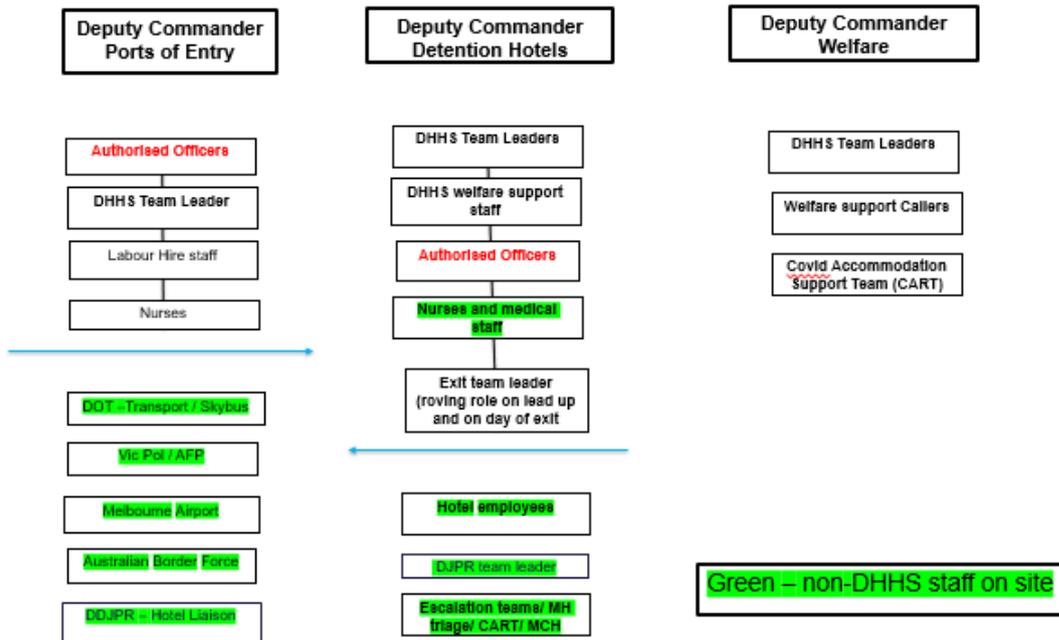

List of possible appendices / supporting documents to add:

- Compliance plan (Meena's team – AO operational guide)
- Nursing operational guide
- GP operational guide
- Team leader operational guide
- Sample daily health and welfare report
- Welfare survey
- Weekly satisfaction survey
- Welfare call centre guide / script
- Hotel isolation medical screening form
- COVID-19 assessment form
- Nursing documentation (from YNA)
- COVID-19 testing factsheet
- COVID-19 return travellers testing at VIDRL
- Swab record spreadsheet
- Escalation pathway/governance flow diagram
- Transfer to hospital flow chart
- Unwell passenger at airport flow chart
- HBO airport protocol
- Mental health documents
- Flow chart of command structure (EOC/PHC etc. etc.)

## Appendix 1 - Governance

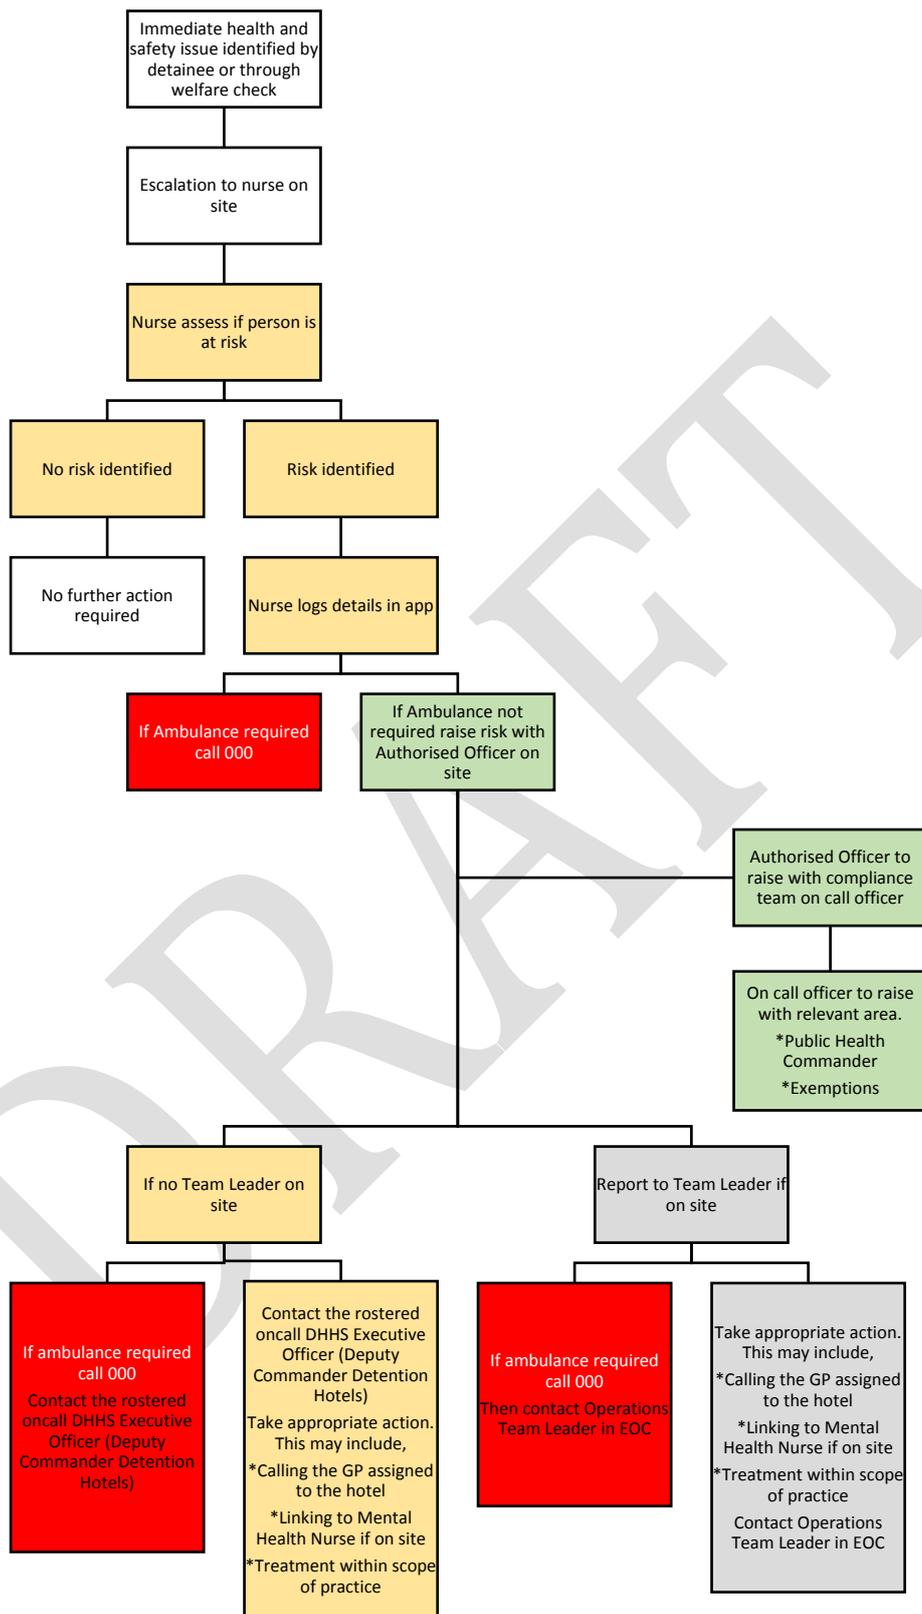

# Operation Soteria – on site teams

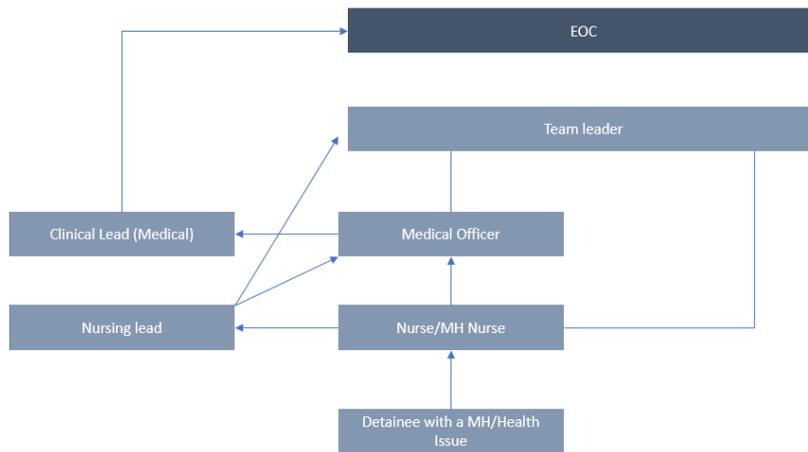

DRAFT

## Appendix 2 – Escalation Process

# Clinical referral pathway

OFFICIAL

**MANDATORY Team leader notification for escalation:**

- Transfer of detainee to hospital
- Adverse outcome
- Deterioration of detainee (mentally or physically)

**URGENT MO ESCALATION +/- AMBULANCE**

- Suicidal/homicidal ideation or intent
- Acute psychosis or delirium
- Chest Pain (If currently ongoing – call 000)
- Breathing difficulty
- Sedation, loss of consciousness, stroke
- HR > 100
- SBP < 90
- RR > 30 or <12
- SpO2 < 94
- Or other clinical concern (seizure, anaphylaxis etc)

**MANDATORY MO ESCALATION:**

- Medication review
- Concerns re: COVID-19 symptoms
- Clinical or mental health deterioration
- Aggression
- Intoxication or drug interaction
- More than 3 calls for review daily
- Hypoglycaemia

**Nursing actions:**

- Welfare / clinical reviews
- Examination + observations
- Referral to CART, beyond blue, ambulance (see above)

DRAFT

# COVID-19 Draft Physical Distancing Plan

**Attachments:** COVID-19 DHHS Physical Distancing Plan.DOCX (406.07 kB)

Dear colleagues

The attached draft plan is provided for your urgent review.

Please track change any areas you are recommending are changed and email me and an officer will collate and we will propose a final version to go back.

**Comments requested by midday tomorrow.** If not possible, your suggestions will be incorporated into Version 2 later in the week.

If possible, if you work in a team on physical distancing, coordinate your comments through your lead back to me so there are fewer rather than more comments.

Once changes come in, I will circulate formally to the DIMT by 4pm tomorrow for provision to Deputy Chief Health Officer and Chief Health Officer for endorsement.

Regards

Finn

Dr Finn Romanes  
Deputy Public Health Commander - Planning  
Novel Coronavirus Public Health Emergency

## Background

In Victoria, the term 'physical distancing' will be used, in preference to the term 'social distancing'.

A recent summary of the value of social distancing in relation to the COVID-19 emergency was given as:

*“Social distancing is one of the key measures currently being utilised to contribute to Australia’s ability to severely limit transmission of COVID-19. This reduces the burden of disease in the community, and importantly, will ensure healthcare capacity is not overwhelmed at any given time. The health sector must continue to undertake its core functions, as well as maintain the capacity to support those with COVID-19 who require more intensive care.*

*The overarching goal of our recommendations is to slow the spread of the virus and flatten the epidemic curve. We all have both a community and individual responsibility to maintain social distancing and minimise interactions in order to protect the people we love. The aim is a population response, to reduce transmission to protect vulnerable populations.”*

## Purpose

This plan intends to:

- Provide clarity to all parts of the Department of Health and Human Services' (the department's) physical distancing response to coronavirus disease 2019 (COVID-19);
- Describe the strategy and protocols for the physical distancing response;
- Describe the compliance and enforcement policy for all directions, including mandatory detention policy;
- Inform internal and external communications collateral around physical distancing.

## Scope

In scope for this policy are:

- Physical distancing interventions in Victoria;
- Quarantine and isolation interventions in Victoria implemented for any reason.

## Authorising environment

### Chief Health Officer and Deputy Chief Health Officer

Under a state of emergency declared by the Victorian Government, the Chief Health Officer and Deputy Chief Health Officer have exercised powers to make a range of Directions that reflect physical distancing controls in Victoria, as described in Annexes to this plan.

### National Cabinet

National Cabinet for COVID-19 has released statements of policy on social distancing (physical distancing). These are reported to have been based on advice from the Australian Health Protection Principal Committee (AHPPC). The AHPPC releases its advice in statements which are published online.

### Victoria Police

Advice has been sought from Legal Services as to the role of Victoria Police. As of 31 March 2020, Victoria Police will undertake a greater role in managing compliance in the community including issuing of infringement notices. As a result, the role of DHHS authorised officers in specific support to Victoria Police around compliance checks will reduce as Victoria Police have a range of powers considered sufficient to investigate, including to issue infringements and fines.

## **Governance of physical distancing policy within the DIMT**

A Physical Distancing Cell will be chaired by the Deputy Public Health Commander – Planning, on behalf of the Deputy Chief Health Officer (Public Health Commander). This will include:

- a communications lead;
- an enforcement and compliance lead, and
- an evidence and policy lead.

## **Policy on control measures for physical distancing**

### **AHPPC recommendations to National Cabinet**

#### **Statements by AHPPC**

The Australian Health Protection Principal Committee (AHPPC) have made a number of statements on the matter of physical distancing (social distancing). These are available at TRIM location HHSF/20/7891, and on the web at <https://www.health.gov.au/news/latest-statement-from-the-australian-health-protection-principal-committee-ahppc-on-coronavirus-covid-19-0>

Statements with content directly bearing on social distancing include the following statements with media event dates and date of the statement. The most recent AHPPC statement was 30 March 2020.

### **National requirements from National Cabinet**

The National Cabinet has made announcements through the Prime Minister, including a statement relating to social distancing on 24 March and as recently as 30 March 2020.

### **Legal directions in Victoria**

#### **Directions work within legal services**

A team within the department's Legal Services Branch has been established, including order to draft Directions under the state of emergency, for the Chief Health Officer and Deputy Chief Health Officer. The Legal Services Branch is not available to provide third party legal advice on Directions and their compliance or otherwise.

#### **Process for creating Directions**

The process involves a number of steps, some of which are iterative as the policy underlying the Direction is developed.

These steps include – but are not limited to –

- Policy area develops a need for a Direction under the state of emergency;
- Legal services commence work to create instructions;
- Secretary finalises required directions content to Legal Services;
- Legal Services instructs parliamentary counsel to draft instructions;
- Final check undertaken with Chief Health Officer or Deputy Chief Health Officer;
- Direction is signed;
- Direction is published on the webpage;
- A communications approach is initiated, including a press release and frequently asked questions.

#### **Critical step in creation of Directions**

The Deputy Chief Health Officer has identified a minimum requirement for an evidence-informed policy rationale to be recorded prior to the issuing of directions, and that this evidence-informed rationale extends beyond the general

observation of a state of emergency having been declared. Such a short evidence summary could be produced by the Intelligence function.

## Directions

At the current time, Directions are generally signed by Dr Annaliese van Diemen (Deputy Chief Health Officer) as authorised by the Chief Health Officer.

Consideration is being given to expanding the list of authorised officers who can sign directions to include other Senior Medical Advisors within the response who are Authorised Officers.

## List of Directions

The following directions are displayed on the department's website at <https://www.dhhs.vic.gov.au/state-emergency> and were made by the Deputy Chief Health Officer or Chief Health Officer:

- *Direction on airport arrivals (Annex 1) – 18 March 2020 (revoked 30 March 2020 - still displayed for reference);*
- *Direction on cruise ships docking (Annex 2) – 19 March 2020 (revoked 30 March 2020 - still displayed for reference);*
- Direction on aged care (Annex 4) – 21 March 2020;
- Direction on hospital visitors (Annex 6) – 23 March 2020;
- Direction on isolation (diagnosis) – 25 March 2020;
- Direction on revocation of airport arrivals and cruise ship directions – 28 March 2020;
- Direction on detention notice – Undated (first posted 28 March 2020);
- Direction on stay at home – 30 March 2020;
- Direction on restricted activity – 30 March 2020.

## Summary of legally required actions in Victoria regarding physical distancing

The Directions in place are available online, and at the TRIM location HHSF/20/7901.

The summary of the key requirements in all seven active directions, across four themes, is below (linking to the Direction itself for more detail).

### Directions on visitors to aged care facilities – 21 March 2020

- Prevents entering or visiting aged care facilities unless goods and services are necessary, and if the person meets criteria for a suspected case or is ill or is not up to date with vaccination or is under 16;
- Some exemptions including employee, care and support, end of life visit.

### Directions on hospital visitors – 23 March 2020

- Prohibits non-essential visits to hospitals, including for categories of patients, workers and visitors;
- Exceptions include patients. Exemptions can be granted.
- Prohibits non-essential business operation from noon on 23 March 2020, including for pubs, hotels, gyms,

### Directions on isolation – 25 March 2020

- Prohibits movement out of isolation until DHHS clear the person but allows a person not in their home to go directly there after diagnosis.

### Direction on stay at home – 30 March 2020

- Restricts the way by which people can leave their home making an effective requirement to stay at home except in certain circumstances, restricts gatherings to two people in most instances with some exceptions.

### Direction on restricted activity – 30 March 2020.

- Expands restrictions on certain businesses and undertakings put in place as part of non-essential activities restrictions, for example to include playgrounds.

### Direction – detention notice – 27 March 2020

- Orders the detention of all persons who arrive into Victoria from overseas on or after midnight on 28 March 2020, requiring they be detained in a specified room in a hotel, with only limited reasons wherein leaving the room can be allowed.

### **Directions that have been revoked**

The following Directions have been issued but have been revoked. Information is included for reference.

#### Direction on airport arrivals -18 March 2020

- *Anyone who arrives at an airport in Victoria on a flight that originated from a place outside Australia, or on a connecting flight from a flight that originated from a place outside Australia must self-quarantine for 14 days after arrival, if arrived after 5pm on 18 March 2020;*
- *Sets rules on being in quarantine – cannot leave home except in an emergency and cannot allow people to enter unless they live there.*

#### Directions on cruise ship docking – 19 March 2020

- *Anyone who disembarks at a port in Victoria from an international cruise ship or an Australian cruise ship (which is on a voyage from a port outside Australian territory) must self-quarantine for 14 days after arrival.*
- *Allows for some exceptions (goes interstate directly, or to hospital).*

#### Directions on mass gatherings – 21 March 2020

- *Non-essential mass gatherings are prohibited (not allowed to be organised, allowed or attended). A mass gathering means:*
  - *A gathering of five hundred or more persons in a single undivided outdoor space at the same time;*
  - *A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.*
- *In addition, the total number of persons present in the indoor space at the same time does not exceed the number calculated by dividing the total area (measured in square metres) of the indoor space by 4, meaning a limit of one person per four square metres (2x2m).*
- *Many specified exemptions, including for some forms of transport, schools, prisons, Parliament or where CHO or DCHO issue an exemption.*

#### Directions on non-essential business closure – 23 March 2020

- *Prohibits non-essential business operation from noon on 23 March 2020, including for pubs, hotels, gyms, places of worship, other specified businesses;*
- *No exemptions process is specified – it is an inclusive list.*

#### Directions on prohibited gatherings – 25 March 2020

- *Non-essential gatherings are prohibited from midnight on 25 March 2020 – not to be organised, allowed or attended.*
- *Adds two additional prohibited mass gatherings which are social sport gatherings and weddings and funerals.*
- *Specifies a density quotient, with examples.*
- *A mass gathering means:*
  - *A gathering of five hundred or more persons in a single undivided outdoor space at the same time;*
  - *A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.*
- *Many specified exemptions, including social sport gatherings (two or more people), weddings, and funerals (no more than 10 people – indoors or outdoors), some forms of transport, schools, prisons, Parliament or where CHO or DCHO issue an exemption.*
- *Allows for exemptions to be asked for and granted.*

#### Directions on non-essential activities – 25 March 2020

- *Prohibits categories of non-essential activity;*
- *Adds requirement for signage, cleaning and disinfection on businesses that remain open;*
- *Includes prohibition on licensed premises, personal training facilities, outdoor personal training limited to ten persons, entertainment facilities, non-essential retail facilities, food and drink facilities, accommodation facilities, swimming pools, animal facilities, auctions;*

- *Exceptions include essential public services such as food banks, wedding venues, recording of performances, time-limited haircuts, delivery of goods, densely packed markets (density rule), food and drink facilities in certain places (hospitals for example); some types of accommodation facility.*

## **Announced stages of restrictions in Victoria**

### **Stage 1 restrictions**

Victoria announced 'stage 1 restrictions' on 22 March 2020 and 23 March 2020 and implemented effective midday 23 March 2020. These included:

- Bringing school holidays forward to commence starting on Tuesday 24 March;
- Ceasing non-essential business activity including:
  - pubs, bars or clubs, or hotels (other than to operate a bottleshop, take-away meals or accommodation),
  - gyms,
  - indoor sporting centres,
  - the casino,
  - cinemas,
  - nightclubs or entertainment venues of any kind,
  - restaurants or cafes, other than to the extent that it provides takeaway meals or a meal delivery service
  - places of worship, other than for the purposes of a wedding or funeral.

<https://www.premier.vic.gov.au/statement-from-the-premier-32/>

<https://www.premier.vic.gov.au/statement-from-the-premier-33/>

<https://www.premier.vic.gov.au/wp-content/uploads/2020/03/200323-Statement-From-The-Premier-1.pdf> (this includes a copy of the Deputy Chief Health Officer direction)

### **Stage 2 restrictions**

Stage 2 restrictions were announced on 25 March 2020. Further to the stage 1 restrictions, these further restrictions include:

- Ceasing operation of:
  - Recreation facilities (indoor and recreation facilities, personal training facilities, community centres and halls, libraries, galleries and museums, youth centres and play centres (other than for essential public services);
  - Entertainment facilities (in addition to entertainment facilities already covered in stage 1, stage 2 added theatres, music and concert halls, auditoriums, arenas, stadiums, convention centres, arcades, amusement parks, gambling businesses, brothels, sex on premises venues, and strip clubs);
  - Non-essential retail facilities (beauty and personal care, auction houses, market stalls - other than for the provision of food and drink and subject to density provisions);
  - Food and drink facilities (in addition to stage 1, stage 2 added fast food stores, cafeteria's and canteens, and food courts) but maintaining the ability to provide take away;
  - Camping grounds and caravan parks;
  - Swimming pools (other than private pools not for communal use);
  - Animal facilities (zoos including petting zoos, wildlife centres, aquariums or animal farms not for food production);
  - Real estate auctions (other than remotely) and inspections (other than by appointment);
- Introduced a density quotient for retail facilities of 1 per 4m<sup>2</sup> and increased cleaning requirements;
- Introduced a restriction social sport gatherings;
- Limited attendees at weddings (5 people) and funerals (10 people).

Prohibits operation of non-essential businesses and undertakings to slow spread. Cafes and food courts must stop providing table service, but may continue to offer delivery and takeaway. Cafes and canteens may continue to

operate at: hospitals, care homes and schools, prisons, military bases, workplaces (though only as a takeaway service). Auction houses, real estate auctions and open house inspections, non-food markets, beauty and personal care services.

<https://www.premier.vic.gov.au/wp-content/uploads/2020/03/200325-Statement-From-The-Premier-1.pdf>

### Stage 3 restrictions

These restrictions came into effect at midnight on 30 March 2020, and are:

- Gatherings are restricted to no more than two people except for members of your immediate household and for work or education purposes;
- Requirement to stay home will become enforceable;
- Playgrounds, skate parks and outdoor gyms will also close;
- There are only four reasons to be out:
  - Shopping for what you need – food and essential supplies;
  - Medical, care or compassionate needs;
  - Exercise in compliance with the public gathering requirements;
  - Work and study if you can't work or learn remotely;
- Moratorium on evictions introduced;
- Rules for weddings (no more than five people to attend) and funerals (no more than ten people can attend).

### Essential services and non-essential services

A listing of the Victorian classification of essential compared to non-essential is under development. **REDACTED**

### Summary of strong recommendations in Victoria on physical distancing (should) – top lines

In addition to Directions, the Chief Health Officer provides a number of strong recommendations around physical distancing that are considered critical for suppressing any transmission of COVID-19 in Victoria at the current time.

The top lines at the present time are:

- Play your part and do the right thing or Victorians will die.
- Wash your hands.
- Cough into your elbow.
- Keep your distance from other people. Keep 1.5 metres between yourself and others
- Stay at home.
- If you can stay home, you must stay home.
- Stay in your own house and do not go to someone else's house.
- If you don't need to go out, don't go out.
- Do not go out if you are sick except to seek medical care.
- Shop for what you need, when you need it – do not go shopping unless you have to.
- If you can work from home, you should work from home.
- If you go to work, you must follow all the social distancing rules.
- Keep a distance of 1.5 metres is between yourself and others.
- Stop shaking hands, hugging or kissing as a greeting.
- Work from home where possible.
- If you have had close contact with a confirmed case of coronavirus (COVID-19) in the previous 14 days you must self-isolate and must not participate in community gatherings including community sport.
- Stay home if you are sick and don't expose others. If you are unwell with flu-like symptoms, do not go outside your property or home, do not go to work, school or shops unless it is essential – for example to seek medical care.

- Do not travel interstate, overseas or take a cruise. Avoid unnecessary travel.
- Everyone should avoid crowds if possible. If you must be in a crowd, keep the time short.

## Policy development and decision-making

### Evidence for physical distancing policies

Physical distancing between people aims to minimise interactions between people to limit the opportunities for disease to spread from an infected person to an un-infected person. Measures to bring about physical distancing amongst populations have been utilised in previous efforts to control influenza epidemics and pandemics.

Observational and modelling studies have provided evidence to help guide the use of physical distancing measures for influenza. Although these can provide some insight into how we might expect physical distancing to influence the progression of the COVID-19 pandemic, COVID-19 has its own disease characteristics which will influence the impact of physical distancing measures.

Evidence of the impact of social distancing is beginning to emerge from countries in which the epidemic commenced earlier than in Australia, particularly China. Additionally, modelling studies using information on the epidemiological features of COVID-19 are estimating the impact of different physical distancing measures.

To ensure that Victoria's approach to physical distancing is informed by the best-available evidence, an evidence summary will be produced and updated as new results emerge from the global scientific community. The current summary of evidence for physical distancing is at **Appendix 5**. This will be updated regularly **REDACTED**

### International and national comparisons

Reports outlining the physical distancing interventions in place in other Australian states and internationally will be developed and updated on an ongoing basis. These will be updated weekly in the first instance, however the current summary of comparisons for physical distancing is at **Appendix 6**. **REDACTED**

### Evaluation of physical distancing policies

A range of measures to evaluate the efficacy of all interventions will be developed. In the first instance, these measures will include those suggested by the AHPPC:

- Evidence for efficacy of strengthened border measures/ travel advisories: reduction in the number of imported cases detected over time;
- Evidence of efficacy of the reduction in non-essential gatherings and mixing group sizes: reduction in the average number of secondary infections per case, based on contact tracing;
- Evidence for the combined efficacy of case finding and contact quarantine measures augmented by social distancing: reduction in the rate of growth of locally acquired infected cases;
- Evidence for the effectiveness of isolation: time from symptom onset to isolation.

The Intelligence function will develop a framework for monitoring and advising on progress with the effectiveness of physical distancing interventions in Victoria, to inform understanding of the Chief Health Officer and other colleagues, including decision-makers. **REDACTED**

Development is underway of a detailed evaluation proposal / approach to evidence collation the current summary of comparisons for physical distancing is at **Appendix 7**. **REDACTED**

## Compliance and enforcement for physical distancing

### Purpose of this section

The purpose of this compliance protocol is to set out the compliance approach in relation to Deputy Chief Health Officer (D/CHO) directions under *Public Health and Wellbeing Act 2008* (PHWA).

### Scope of compliance and enforcement

The scope of enforcement and compliance activity will include persons and situations listed below:

- People under quarantine for any reason, including travel or close contact;
- People under isolation for any reason, including suspected cases and confirmed cases;
- Mass gatherings and any matter relating to any Direction relating to physical distancing, including visitation restrictions.

### Chain of command for enforcement and compliance

It has been agreed with the Chief Health Officer and Deputy Chief Health Officer that the chain of command for matters relating to physical distancing (especially and including enforcement and compliance actions) interventions – in particular the compliance and enforcement activities relating to directions - is:

- Chief Health Officer to
- Public Health Commander to
- Deputy Public Health Commander (Planning) to
- Director Health and Human Services Regulation and Reform to
- Manager Environmental Health Regulation and Compliance to (where necessary -
- Victoria Police).

### Strategy for compliance and enforcement

#### Intended outcome of compliance and enforcement activity

The outcomes being sought are to reduce the transmission COVID-19 through quarantine (self-isolation) for 14 days of those returning from overseas, isolation of those suspected to have or confirmed to have COVID-19, application of restrictions on non-essential mass gatherings, restricted entry into aged care facilities where vulnerable populations reside and closure of non-essential business. Actions should focus on achieving outcomes, be risk-based and minimise transmission risks in the Victoria community.

#### Strategy for focus of compliance and enforcement activity

The focus of activity will be on:

- Implementation of a mandatory detention program for new arrivals from overseas;
- Spot checks by Victoria Police of people who should be in quarantine or isolation;
- Mass gathering compliance and enforcement by Victoria Police.

These priorities will change, and likely expand into specific and more targeted risk-based compliance for highest-risk individuals in quarantine or isolation.

The department will consider enhanced monitoring arrangements and consider indicating to Victoria Police that other methods are considered, such as tracking of individuals through mobile phones, or random sampling calls to mobile phones of individuals if agreed. These methods are not yet formally under consideration. **Fiona Sparks**

#### Approach to compliance and enforcement – prioritisation framework for compliance activities

This will be based on a risk framework, based on public health risk.

An initial frame for Victoria Police was provided on 25 March 2020 and was:

- Cases diagnosed after midnight tonight.
- Passengers who have disclosed country visited in one of the higher risk countries? Which ones?
- Random selection of age cohorts from passenger list (of those who arrived less than 14 days ago) so that we can start to gauge which cohorts are the most likely to not comply.
- Pubs/clubs etc. (should be fairly easy to gauge with overnight crews.)
- Any allegations received from DHHS or VicPol Police Assistance Line.
- Selection of commercial premises mentioned in latest direction.

The proposed new preliminary order for focus of compliance and enforcement based on a public health risk assessment is (highest priority is first) from 26 March 2020 and updated 1 April 2020:

- Returned travellers from overseas who are in mandatory quarantine;
- Returned travellers from overseas who have indicated they do not intend to adhere to quarantine (self-isolation);
- Mass gatherings that are underway where there alleged non-compliance with Directions;
- Cruise ships where there is potential or alleged non-compliance with Directions;
- Non-essential businesses where there is potential or alleged non-compliance with Directions;
- Confirmed cases who indicate they do not intend to isolate or are suspected not to be isolating;
- Known close contacts who indicate they do not intend to isolate or are suspected not to be isolating;
- Individuals where there is a report that a person is not adherent to quarantine or isolation;
- All other confirmed cases in relation to isolation Direction;
- All other close contacts;
- Prohibited gatherings (other than mass gatherings) that are underway or alleged non-compliance with Directions;
- Non-essential activities that are alleged to be non-compliant with Directions.

The Director of health and Human Services Regulation and Reform will communicate these priorities as a control agency advice to Victoria Police on a daily basis or as updated.

### **Linking members of the public to compliance action by Victoria Police**

Linking occurs by:

- Callers may select the social distancing advice line between 8am and 8pm at DHHS by calling 1800 675 398 and selecting option 2.
- Callers may speak to Victoria Police by calling 1800 675 398 and selecting option 4.
- Callers who come through to any other line should be referred to the 1800 675 398 line and advised to select option 4.
- Members of the public are encouraged to call the phone line, rather than emailing their concerns.
- If concerns are emailed from the public about compliance with directions excluding those that are about close contacts and confirmed cases, the email should be forwarded to the Victoria Police complaints inbox, which is [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

### **Department of Health and Human Services Liaison to Victoria Police**

The department has established a roster of Emergency Management Liaison Officers at the State Control Centre, associated with the Police Operations Centre. The roster for the EMLO is on the board at the State Emergency Management Centre.

### **Department of Health and Human Services initiation of compliance activity**

If concerns are emailed from the public about compliance by close contacts and confirmed cases, the Operations Officer should oversee an investigation by the case and contact management team. If the case and contact management team assess that compliance action is required, they should contact the DHHS EMLO on the roster to

agree how Victoria Police can assist, and may need to email details to the COVID-19 Victoria Police DHHS email address, which is [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

### **Peer influence, education and community awareness to guide approach**

It is anticipated that there will be high levels of voluntary compliance by those impacted by the Directions. This is due to high levels of community awareness, strong community support for measures to prevent transmission of COVID-19.

### **Exercising a direction and considerations of enforcement**

DHHS authorised officers are empowered to direct a person to comply with a D/CHO Direction (exercising the emergency powers). Victoria Police can assist an authorised officer to exercise a direction. Victoria Police are now undertaking a range of actions, including enforcement actions such as infringements.

Consideration of enforcement action, such as a prosecution under the PHWA, should generally only be pursued where there is a deliberate intention to not comply and/or repeated failure to comply with a direction.

### **Victoria Police COVID 19 Taskforce**

A Victoria Police taskforce of 500 officers will promote and assess compliance with directions and perform spot-checks, such as visiting those who have recently returned from overseas. The taskforce is coordinated through the Police Operations Centre. Information for spot checks can be provided directly to through Victoria Police SPOC.

### **Victoria Police support to DHHS compliance activity**

Victoria Police (VicPol) will support DHHS to respond to allegations of non-compliance with the directions. This includes:

- receiving reports of non-compliance with directions through the Victoria Police Assistance Line (1800 675 398 – option 4);
- seeking to influence compliance and behaviour through spot checks, reiterating obligations, providing education and outlining penalties for non-compliance, issuing infringements;
- informing DHHS about alleged non-compliance and requesting DHHS support and response;
- where required, assisting DHHS authorised officers to provide a direction to a member/s of the public.

### **Contacting the Victoria Police Special Operations Centre**

Victoria Police Special Operations Centre private number is **REDACTED** if a senior officer in DHHS needs to contact the SPOC directly for an urgent reason.

The DHHS EMLO to Victoria Police is available through a roster in the SEMC.

## **Data management to support compliance and enforcement**

### **Department obtaining data on travellers for compliance**

Authorised officers are responsible for uploading information to the business system which will then inform an upload to PHESS so that all persons in mandatory detention are recorded in PHESS for compliance and monitoring and surveillance purposes. This upload will occur under the accountability of the Director of Health Regulation and Reform. Final arrangements being confirmed **[Matthew McCrone, Charles Alpren, Nick Chiam]**

### **Provision of data on agreed priority groups to Victoria Police for enforcement and compliance purposes**

On the direction of the Chief Health Officer, the Intelligence Officer has established a secure data portal for DHHS-Victoria Police data secure data sharing and provided a limited number of named Victoria Police officers in the COVID-19 response access. Information is being uploaded from Isolation Declaration Cards to a spreadsheet and then provided to the Intelligence Officer, who are then providing that information to Victoria Police for compliance

purposes by a secure portal, on a daily basis. In conjunction with the priorities for compliance, Victoria Police can then take directed action. An information sharing agreement is under development. **REDACTED**

Once each day, the Intelligence Officer or delegate will upload the following to the data portal:

- Instructions on the use of the data;
- All active close contacts;
- All non-recovered confirmed cases;
- All new arrivals via scanned and uploaded Isolation Declaration Cards.

In coming days, data will be widened to include other groups if authorised by the Chief Health Officer. Further work is required to formally provide information on other categories for priority compliance activity **[Charles Alpren]**.

### **Specific procedures to support compliance and enforcement**

Personal protective equipment for authorised officers is provided through the PPE Taskforce and the Equipment and Consumables Sector of the response **[Katherine Ong]**.

### **Digital platforms to aid contact tracing and enforcement and compliance**

The department will be implementing a new contact system to send daily health monitoring SMS messages to close contacts of confirmed COVID-19 cases and recently returned travellers who must isolate for fourteen days.

This system will use an Australian based system called Whispir to send messages to contacts in the department's public health monitoring systems. **[Charles Alpren, REDACTED]**

People who receive these messages will be required to check in daily to:

- Confirm that they are in quarantine
- Whether they are well or experiencing COVID-19 symptoms
- Whether they have been tested and waiting for results.

Close contacts and returned travellers who are not isolating will be flagged by the system and can be further followed up as required.

This system became active from 26 March 2020.

Further work is underway to explore other systems for automating case and contact tracing. **[Fiona Sparks]**

### **Management of exemption requests not relating to mandatory quarantine**

Exemption requests are now being discouraged.

Exemptions should only be considered when there is a provision within the Direction to allow an exemption to be considered.

The Authorised Officer should provide advice to the requestor consistent with the *COVID -19 DHHS Physical Distancing Plan*. The Plan is an internal document and is not for provision to members of the public.

Further information and consultation for an exemption of physical distancing can be contacted on 1800 675 398.

The process for management of exemption of physical distancing/ essential services requests is as follows:

The Public Health Commander, through authorised officers, should properly consider any request for an exemption.

The process is:

- Members of the public who wish to ask for an exemption have the option of submitting a request in writing to the COVID Directions inbox (i.e. in writing); requestor can be advised to make submission for exemption of Physical Distancing/ essential services through [COVIDdirections@dhhs.vic.gov.au](mailto:COVIDdirections@dhhs.vic.gov.au)
- Authorised officers should also use the COVID Directions inbox to submit requests for exemption to be assessed;

- All requests for exemption that are considered are logged on the secure MS Teams site established by Legal Services in a manner that can be audited and reviewed by any party in this compliance chain;
- The Director of Health Protection and Emergency Management (lead for COVID-19 Directions) who oversees the inbox and team managing this process assesses the merits of the individual proposal – including through delegates - and applies judgment as to whether the application should proceed to the next step;
- Requests will be reviewed in an initial assessment and will be assigned into three categories –
  - Priority 1 requests – where there is a same day urgency and importance is high;
  - Priority 2 requests – where there is complexity, lower urgency and / or medium urgency;
  - Priority 3 requests – where the authorised officer has determined that the exemption is rejected and will not proceed further. Explanations to parties should emphasise the Directions and rules and how to stay safe.
- In considering an exemption, an Authorised Officer will then consider the application and may contact the Requestor to ascertain further information. In reviewing the request, the Authorised Officer will consider the extent to which there is a risk of transmission associated with the proposed exemption, across factors including:
  - Compliance – compliance with measures is an important factor for higher risk groups
  - Proximity of people - possibly the next most important factor
  - Frequency of interactions - possibly the next most important factor
  - Likelihood of surface touching - reason for hand hygiene focus
  - Air environment (affecting likelihood of 'jumping' across) - reason outdoors is less risky – droplets less likely to travel
- After this initial assessment process, priority 1 requests will be:
  - Referred immediately to the Director E+C including with a short email summary including a recommendation;
  - The Director E+C submits the proposal to the Deputy Public Health Commander Planning with a recommendation, and calls the Deputy PHC Planning to discuss and alert the DPHC to the request, including legal service advice as needed;
  - Deputy Public Health Commander assesses the recommendation and then recommends the outcome required by the Public Health Commander;
  - Public Health Commander communicates the outcome and the Director E+C is authorised to enact the outcome.
  - Police will then be advised where exemptions are granted by the Public Health Commander via the [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) that have relevance for enforcement and compliance by Victoria Police.
- After this initial assessment process, priority 2 requests will be:
  - The Director HP+EM then submits in writing the application to the Director of Enforcement and Compliance with title 'For Decision: Detention Exception Request';
  - Captured in writing and batched together for consideration once a day for the review by a panel where available;
  - Where available, a **panel** could include a legal services representative, a delegate of the Director E+C and the DPHC Planning or delegate;
  - The panel will then rapidly assess and decide on each priority 2 request;
  - The outcome of the decisions (grant or reject) is then enacted by the Directions Cell, under the management of the Director HP+EM.
  - Police will then be advised where exemptions are granted by the Public Health Commander via the [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) that have relevance for enforcement and compliance by Victoria Police.
- After this process, priority 3 requests will be:
  - Officer of the department writes back to indicate the exemption has not been granted, and should consider using scripts as provided at **Appendix 7**.
- The Authorised Officer must then notify the requestor in writing the outcome of the decision of the Public Health Commander.
- Formal documentation placed into the TRIM folder by the Deputy Public Health Commander or a tasking officer.

An audit of requests to check responses will be undertaken in due course, including a review of how exemptions granted are communicated publicly, if at all.

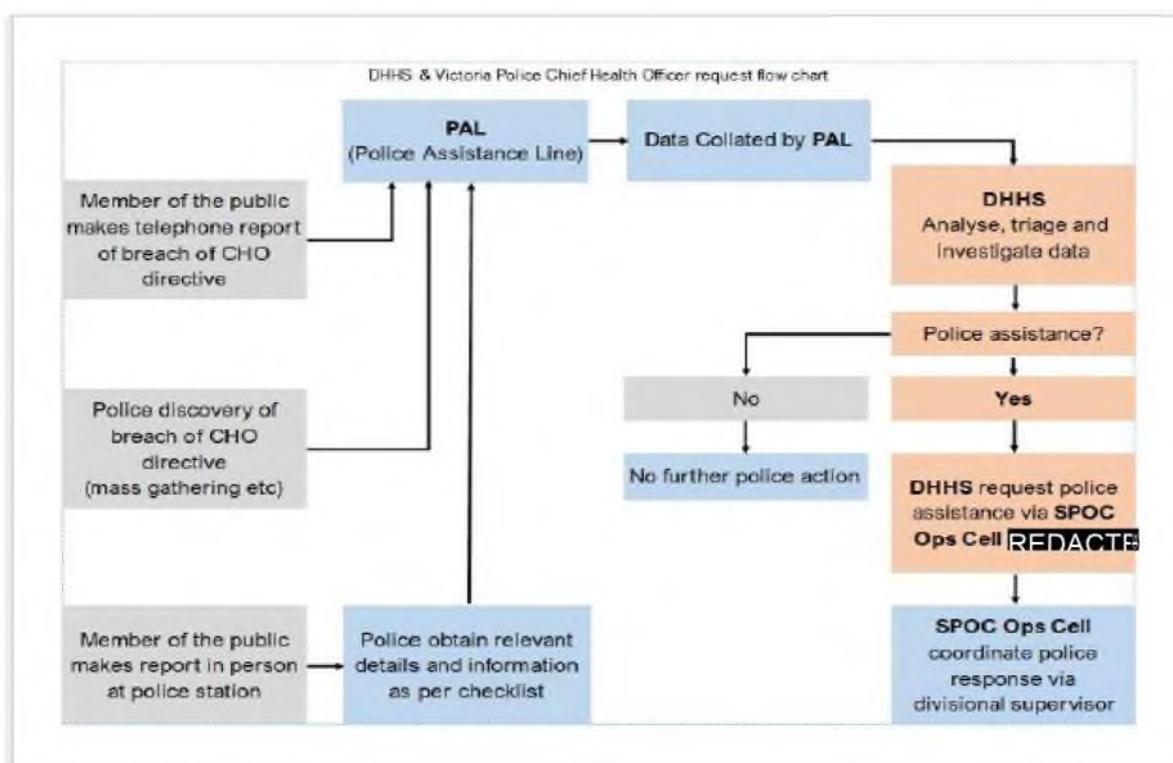

## Protocols for investigating and managing potential breaches of Directions

Information is included here for reference, as Victoria Police have assumed a more independent role as to undertaking compliance and enforcement activity, with strategic direction as to highest risk groups.

### General procedure

The following flow diagram outlines a general process flow for managing alleged breaches of a direction. It excludes education and spot checks performed by the Victoria Police COVID-19 taskforce.

Diagram 1 Flow diagram for managing alleged breaches

### Mass Gatherings No.2

#### Recording of details and initial assessment

Reports of an alleged breach of the Mass Gatherings Direction (No.2) will be referred to the Victoria Police Advice Line 131 444.

Following a report of an alleged mass gathering, Victoria Police will seek the following details:

- contact details of the caller
- name, address, contact details of the person allegedly breaching the direction such as the organiser of the mass gathering and/or the person who owns, controls or operates the premises
- relationship to the caller
- location, time and description of the gathering, e.g. private residence or public place, name of venue or operator
- estimated number of people planned for, or at, the gathering
- place and intended time of the mass gathering
- whether the gathering is indoors or outdoors.

Consideration should also be given to:

- whether the circumstances meet the definition of a mass gathering and exclusions including less than 100 people in a single undivided indoor space and there is not more than one person per 4 metres squared
- whether a mass gathering is planned, currently occurring or finished

#### Action to achieve compliance and address non-compliance

##### *Planned mass gatherings*

Following a report of a planned mass gathering, Victoria Police will refer the matter to DHHS via [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au). Or to the DHHS EMLO at the SPOC. The DHHS EMLO at the SPOC needs to work with the compliance and enforcement team to enact further action.

DHHS will then:

- urgently email or phone the organiser and/or person who owns, controls or operates the premises to deter the mass gathering from occurring. DHHS will reiterate obligations, outline penalties for non-compliance and advise assistance may be sought from Victoria Police if the mass gathering proceeds.
- seek confirmation that the mass gathering will be cancelled
- consider the risk of the mass gathering including location, density of people present or likely to be present, flow or movement of persons or any social distancing factors
- consider issuing a verbal or written direction (through an authorised officer) to the organiser and/or person who owns, controls or operates the premises to cancel the mass gathering if:
  - a high risk is identified
  - there is no reasonable indication the mass gathering will be cancelled
- seek assistance of Victoria Police through Victoria Police SPOC operation cell **REDACTED** if DHHS determines a site visit and issuing a direction on site is needed.

##### *Currently occurring or recurring mass gatherings*

Following a report of a currently occurring mass gathering, Victoria Police will determine if attendance is feasible. If Victoria Police attends, Victoria Police will:

- contact DHHS via the DHHS EMLO at the SPOC
- seek to identify a person who:
  - owns, controls or operates the premises; and/or
  - is organising the mass gathering
- seek to influence compliance by reiterating obligations, providing education such as a fact sheet and outlining penalties for non-compliance.

Noting DHHS has limited capacity to attend a mass gathering while it is occurring (particularly after hours), DHHS will:

- consider the risk of the mass gathering including location, density of people present or likely to be present, flow or movement of persons or any social distancing factors
- consider providing information about obligations through a phone call, email or standard letter if breach is inadvertent or low risk in nature and future compliance is likely
- consider issuing a verbal or written direction (through an authorised officer) to stop the mass gathering. For a written direction, this may be undertaken after the mass gathering has finished
- seek confirmation that the mass gathering will be stopped or does not breach the direction in future
- consider a site visit and seek assistance from Victoria Police through SPOC operation cell **REDACTED** to stop the mass gathering if:
  - a high risk is identified
  - there is no reasonable indication the mass gathering will be stopped.

### *Finished mass gatherings*

Following a report of a finished mass gathering, Victoria Police will refer the matter to DHHS via for action. DHHS will:

- contact the organiser and/or person who owns, controls or operates the premises to:
  - obtain reasons why the mass gathering occurred
  - reiterate obligations, provide further education and penalties
  - seek confirmation there will be no breach of the direction in the future
- consider the risk of the mass gathering including location, density of people, flow or movement of persons or any social distancing factors
- consider issuing a verbal or written direction (through an authorised officer) to prevent a further mass gathering if the mass gathering is high risk in nature and there is a likelihood the mass gathering will recur.

### **Aged Care Facilities**

#### Recording of details and initial assessment

Reports of an alleged breach of the Aged Care Facilities Direction will be referred to the Victoria Police Advice Line 131 444. Victoria Police will seek to obtain:

- contact details of the caller
- name, address and contact details of the person allegedly breaching the direction
- description of the breach
- relationship to the caller.

#### Actions to achieve compliance and address non-compliance

Following a report of a breach of the Aged Care Facilities Direction, Victoria Police will refer the matter to DHHS via [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) for action. DHHS will:

- contact the operator of the aged care facility to reiterate obligations, provide further education and outline penalties
- contact the person breaching the direction to reiterate obligations, provide further education and outline penalties
- seek confirmation there will be no breach of the direction in the future
- consider issuing a verbal or written direction (through an authorised officer) if:
  - a high risk is identified
  - there is an indication the breach will recur

### **Non-essential business closure**

#### Recording of details and initial assessment

Reports of an alleged breach of the non-essential business closure will be referred to the Victoria Police Advice Line 131 444. Following a report. Victoria Police will seek the following details:

- contact details of the caller
- name and address of the non-essential business
- details of the alleged breach, such as the type of business and when it is operating

#### Actions to achieve compliance and address non-compliance

Following a report of an alleged operation of a non-essential business, DHHS will:

- contact the person who owns, controls or operates the business to provide a verbal or written direction (through an authorised officer) if;

- a high risk is identified
- there is no reasonable indication the person will comply; or
- provide information about obligations through a phone call, email or standard letter if the breach is inadvertent or low risk in nature and future compliance is likely
- seek a response to the allegation including confirmation there will be ongoing compliance with the direction.

### **Repeated breaches and deliberate intentions to not comply**

Following allegations of repeated breaches and/or a deliberate intention to not comply with any of the directions, DHHS will:

- obtain further information about the reason for alleged breach
- phone the person to further reiterate obligations, reason for self-isolation penalties and subsequently issue a verbal or written direction (through an authorised officer)
- consider a site visit to issue the direction with the assistance of Victoria Police by contacting the SPOC operation cell **REDACT**.

### **Opportunistic identification of non-compliance**

There may be times when Victoria Police identifies a breach of the direction through the normal course of business. For example:

- a person in a public place voluntarily identifies as having returned from overseas within 14 days;
- a mass gathering;
- operation of a non-essential business.

In this instance, Victoria Police should seek to influence compliance by reiterating obligations, providing education and outlining penalties for non-compliance. Victoria Police should ensure the details are recorded through the Police Advice Line and referred to DHHS [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) if follow up is needed.

Additional materials to be worked on and added:

### **Reporting and evaluation of compliance and enforcement**

The department proposes a range of checks or surveys of individuals who are directed to be in quarantine or isolation, including checks or surveys, and key metrics for evaluation. More detail will be developed in due course. Victoria Police provide a daily report on enforcement and compliance activity **[Meena Naidu]**

## Plan for people returning from overseas to Victoria

### Background to mandatory quarantine (detention) intervention

A mandatory quarantine (detention) approach was introduced by a Detention order that came into effect at midnight on Saturday 28 March 2020 and is available at <https://www.dhhs.vic.gov.au/state-emergency>

The objectives of the plan for people returning from overseas to Victoria are:

- To identify any instance of illness in returned travellers in order to detect any instance of infection;
- To ensure effective isolation of cases;
- To provide for the healthcare needs of returned travellers who are well or shown to be COVID-19 negative but are required to remain in quarantine for the required 14 days;
- To implement the direction of the Deputy Chief Health Officer through meeting:
  - A requirement to detain anyone arriving from overseas for a period of 14 days at a hotel in specific room for a specified period;
  - A requirement to record provision of a detention notice showing that the order was served and to manage access to information on who is in detention using a secure database;
  - A requirement to undertake checks every 24 hours by an authorised officer during the period of detention;
  - A requirement to fairly and reasonably assess any request for permission to leave the hotel room / detention.

### Governance and oversight of the mandatory quarantine (detention) intervention

#### Directions and exemptions

The Chief Health Officer and Deputy Chief Health Officer have instituted this Direction.

The following lead roles are involved in the oversight of the mandatory detention intervention:

- Deputy Chief Health Officer – issuing of Directions including the detention direction;
- Deputy Public Health Commander Planning – initial advice to DCHO/PHC on exemption requests where allowed or relevant;
- Director Regulation and Compliance – lead for compliance and enforcement activity including authorised officer workforce – including the issuing and modification of detention directions (for example including moving a person from one room to another);
- Director Health Protection and Emergency Management – lead for welfare and healthcare sector for detention sector;
- Director Primary Care - lead for medical services to people in detention.

#### Information management for people in mandatory detention

A business system is being developed to manage the welfare and health issues for people included in this intervention.

That system articulates with the PHESS database through a common link key.

Critical information about people in mandatory detention will be uploaded to PHESS at two points in the day as a download from the business system to be used.

To be determined: the master source of who has exited the airport in mandatory detention. [Meena Naidu]

To be completed: the build of the business system to support welfare and health needs of people in mandatory detention. [Charles Alpren and Nick Chiam]

The Enforcement and Compliance section will ensure identities of all persons in detention are entered onto PHESS through the twice daily upload process from the completed business system.

As a parallel system, Isolation Declaration Card (IDCs) are collected at the airport and batched and sent to an Australia Post call centre. The data is entered into a spreadsheet and sent to DHHS for cross entry into PHESS. This process takes approximately 24 hours. This can then be reconciled with any passenger list or people in detention list.

### **Authorised officer\* and Chief Health Officer obligations**

Only authorised officers Sections 200(1)(a) and 200(2) – (8) of the PHWA set out several emergency powers including detaining any person or group of persons in the emergency area for the period reasonably necessary to eliminate or reduce a serious risk to health.

Exercising this power imposes several obligations on DHHS authorised officers including:

- before the person is subject to detention, explaining the reason why it is necessary to detain the person
- if it is not practicable to explain the reason why it is necessary to detain the person, doing so as soon as practicable
- before exercising any emergency powers, warning the person that refusal or failure to comply without reasonable excuse, is an offence
- facilitating any reasonable request for communication made by a person subject to detention
- reviewing, every 24 hours, whether continued detention of the person is reasonably necessary to eliminate or reduce a serious risk to health
- giving written notice to the Chief Health Officer (CHO) that a person:
  - has been made subject to detention
  - following a review, is to continue to be subject to detention.

The notice to the CHO must include:

- the name of the person being detained
- statement as to the reason why the person is being, or continues to be, subject to detention.

Following receipt of a notice, the CHO must inform the Minister as soon as reasonably practicable.

*\* DHHS Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order.*

## **Process by stage**

### **Airport and transit process**

Passengers pass through immigration, customs and enhanced health checks before being transferred to their hotel.

- Every passenger is temperature checked by a registered nurse (RN) contracted by DHHS.
- Every passenger is handed a copy of the direction and a detention notice by the DHHS Authorised Officer (AO).
- Every passenger is provided an information sheet by DHHS.
- Passengers are met by VicPol/Border Force and escorted to organised buses for transport to the hotel.
- Every passenger is given a single-use facemask to wear while in transit to their hotel room.
- Every passenger is given a welfare survey to fill out on the bus or at the hotel.

### **Authorised officer actions at the airport**

DHHS Authorised Officers:

- introduce themselves and show their Authorised Officer identification\* (**mandatory AO obligation**)
- must provide a copy of the direction and detention notice to each passenger (or parent/guardian of a minor) and:
  - explain the reasons or detention (**mandatory AO obligation**)

- warn the person that refusal or failure to comply with a reasonable excuse is an offence (mandatory AO obligation)
- ensure the notice of direction and detention:
  - is signed by the detainee and dated
  - has a hotel name and room number
  - has a reference number.
- record issue and receipt of the notice through a scanned photograph and enter in database
- facilitate a translator to explain the notice and reasons for detention
- facilitate any reasonable request for communication, such as a phone call
- provide a fact sheet about detention (what the detainee can and can't do, who to contact for further information)
- cross reference detainees with passenger manifest
- ensure detainee boards the bus (see policy for unaccompanied children)
- record actions taken in writing, including the above mandatory obligations, use of translator and any other arising issues.

If it is not practicable to explain the reason for detention, the AO must do so as soon as practicable. This could be at the hotel, however every effort should be made to provide the direction at the airport. (mandatory AO obligation).

### People who are unwell at the airport

Any person who is unwell at the airport will be assessed by a DHHS staff member and biosecurity officer at the airport. After discussion with the human biosecurity officer, if it is determined that the person meets the criteria as a suspected case, the following actions should take place:

- The human biosecurity officer should organise an ambulance transfer to the Royal Melbourne Hospital or Royal Children's Hospital for testing and assessment;
- The authorised officer from DHHS at the airport should log the person as requiring mandatory quarantine and then should follow-up with the hospital to update on whether the person has been found to be negative, so a transfer can be organised to return to the hotel;
- If the person is unwell and requires admission, they should be admitted and the lead for enforcement and compliance informed;
- If the person is well enough to be discharged they should return to the hotel through an arrangement by the authorised officer, and be placed in a COVID-19 floor of the hospital if positive, or in a general part of the hotel if tested negative for COVID-19.

### Arrival at hotel – check in

- Detainee provides notice of direction and detention to hotel staff to allocate room.
- Detainee provides notice of direction and detention back to AO to confirm the arrival date, time and room on notice.
- AO takes photo of notice of direction and detention and enters into database.
- After nurses conducts medical and welfare check, AO to liaise with nurses to identify detainees with medical or special needs.
- AO to note detainees with medical or special needs, such as prescription and medical appointments.

Passengers will be sent to their allocated room. They will be informed a person will contact them in the afternoon or next day to undertake a more formal assessment of longer-term needs and, that a welfare check will occur daily.

### Welfare and health service provision

- Residents will have a welfare check (as specified below) each day.
- DHHS officers conducting welfare checks email [covid-19.vicpol@dhhs.vic.gov.au](mailto:covid-19.vicpol@dhhs.vic.gov.au) and AO individually to alert AO of medical and welfare issue.

- A welfare survey will be conducted by an Authorised Officer of DHHS.
  - Completed welfare surveys are handed to AOs at the hotel.
  - Residents will be provided with a resident satisfaction survey to complete each week.
  - Residents can seek review by the nurse 24 hours a day if required.
  - 24 hour on-call medical support will be available for on call subject to demand. This will initially be provided by a Field Emergency Medical Officer, and subsequently through a locum general practice service.
  - Medical service to be organised by Primary Care Sector. Deliverables include:
    - Primary care assessments;
    - Prescription provision;
    - 24 hour access to a general practitioner;
    - 24 hour access to nursing assessment.
  - It is advisable that where possible, individuals who are in detention are linked to receive telehealth care from their normal general practice provider.
- \* DHHS Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order.

### **Requirement for review each day**

**This is mandatory AO obligation.** Each 24-hour period, DHHS AO:

- Will undertake a electronic review of detainment arrangements by viewing the business system spreadsheet. This includes reviewing:
  - all detainees at the hotel
  - days in detention so that 14-day self-isolation period is adhered to
  - any other issues that have arisen
  - determining whether continued detention of the person is reasonably necessary to eliminate or reduce a serious risk to health.

To inform decision-making, a DHHS AO must:

- consider that the person is a returned overseas traveller who is subject to a notice and that they are obliged to comply with detainment
- consider that detainment is based on expert medical advice that overseas travellers are of an increased risk of Covid-19 and form most Covid-19 cases in Victoria
- note the date of entry in Australia and when the notice was given
- consider any other relevant compliance and welfare issues the AO<sup>1</sup> becomes aware of, such as:
  - person's health and wellbeing
  - covid-18 symptoms on arrival
  - medical record of being previously infected with Covid-19
  - any breaches of self-isolation requirement
  - issues raised during welfare checks (risk of self-harm, mental health issues)
  - actions taken to address issues
  - being cleared of Covid-19 results while in detention, which may be rationale for discontinuing detention
  - any other material risks to the person
- record the outcomes of their review (high level notes) for each detained person (for each 24-hour period) in the agreed business system database. This spreadsheet allows ongoing assessment of each detainee and consideration of their entire detention history. This will be linked to and uploaded to PHESS.

To ascertain any medical, health or welfare issues, AO will need to liaise with on-site nurses and welfare staff (are there other people on-site an AO can liaise with to obtain this information).

## Charter of Human Rights considerations in decision-making making process

AO should consider the Charter of Humans Rights when exercising emergency powers and reviewing a person's detention every 24 hours, namely:

- **Right to life** – This includes a duty to take appropriate steps to protect the right to life and steps to ensure that the person in detention is in a safe environment and has access to services that protect their right to life
- **Right to protection from torture and cruel, inhuman or degrading treatment** – This includes protecting detainees from humiliation and not subjecting detainees to medical treatments without their consent
- **Right to freedom of movement** – While detention limits this right, it is done to minimise the serious risk to public health as a result of people travelling to Victoria from overseas
- **Right to privacy and reputation** – This includes protecting the personal information of detainees and storing it securely
- **Right to protection of families and children** – This includes taking steps to protect facility and children and providing supports services to parents, children and those with a disability
- **Property rights** – This includes ensuring a detainee's property is protected
- **Right to liberty and security of person** – this includes only be detained in accordance with the PHWA and ensuring steps are taken to ensure physical safety of people, such as threats from violence
- **Rights to humane treatment when deprived of liberty** - This includes treating detainees with humanity

## Written notice to Chief Health Officer and advice to Minister

**This is a mandatory obligation.** DHHS authorised officers must give written notice (after a review) to the Chief Health Officer as to whether continued detainment for the next 24 hours is reasonably necessary to eliminate or reduce the risks to health. The written notice must set out the reasons for continuing or discontinuing detention.

The timing of the written notice to the CHO should occur within 48 hours of an AO undertaking the review. A process to conduct this written notification using an extract from PHESS will be established. The CHO must then advise the Minister of each notice received.

## Occupational health and safety for Authorised Officers

Procedures will set out procedures for authorised officers when attending off site locations during the State of Emergency. It is understood that Emergency Management Branch will provide masks to all DHHS employees.

**[Find and include the procedure for PPE / offsite attendance]**

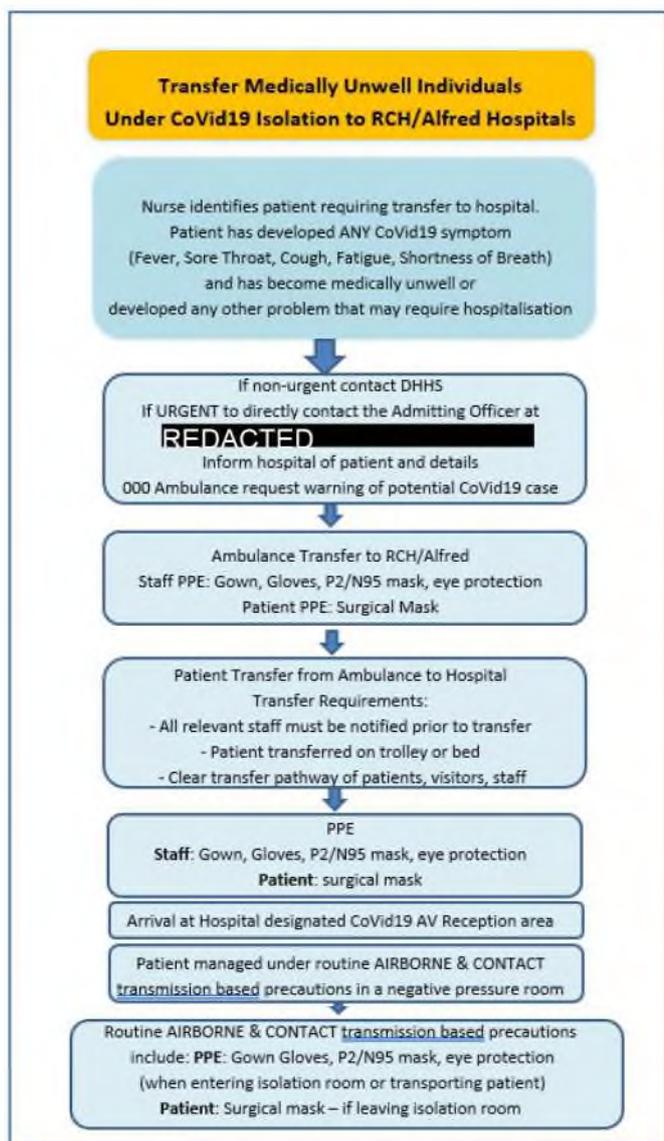

## Actions to detect and test for COVID-19 amongst people in mandatory detention

The following are the actions to enact this:

- Residents will be asked daily (via phone or text) if they have symptoms consistent with COVID-19. These include but are not limited to fever, cough, shortness of breath and fatigue.
- The nurse onsite will be notified. The nurse will call the patient and assess them over the phone. If face to face assessment is required, the nurse will assess them in the room with appropriate PPE.
- Security staff in PPE (masks and gloves) will accompany all nurses visiting hotel rooms. They will wait outside unless requested to enter by the nurses (full PPE is required to enter rooms).
- The nurse will assess for symptoms of coronavirus. If deemed necessary, they will take swabs to test for COVID-19.
- If the patient is well enough, they can remain in quarantine at the hotel to await the test results. If they are sharing a room with another resident, they should be moved to a separate room if feasible and according to availability of rooms. If separation is not possible, they should practise physical distancing as far as is possible.
- If the test is positive and the passenger is well, they can remain in quarantine at the hotel but should be moved to a separate section/floor of the hotel which is designated for confirmed cases. If they are sharing with other passengers, then arrangements such as a separate room or provision of PPE may be required, depending on the circumstances (for example it may not be feasible or appropriate to separate young children from parents).

## Hospital transfer plan

- Passengers requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
- If the hospital transfer is non-urgent, contact DHHS.
- If the hospital transfer is urgent, contact the Admitting Officer at RCH/RMH/the Alfred.
- Inform the hospital of patient and details.
- Call 000 to request ambulance and inform them that the passenger is a suspected (or confirmed) case of COVID-19.
- Staff should don full PPE and the passenger must wear a single-use surgical mask if tolerated.
- All relevant staff must be notified prior to the transfer.
- The passenger should be transferred on a trolley or bed from ambulance into the designated COVID-19 ambulance reception area.
- The patient should be managed under routine airborne and contact transmission-based precautions in a negative pressure room if available. The patient should wear a single-use surgical mask if leaving the isolation room.
- Ambulance services will list the hotels as an area of concern in case of independent calls and will ask on site staff to assess need for attendance in the case of low acuity calls.
- All residents who are: in high risk groups, unwell, breathless or hypoxic (O2 sats <95%) should be considered for hospital transfer.

Note P2 respirators are not required, but appear in this chart as an indicative mask, pending modification of this chart to reflect recommendation that a single use facemask is required.

### Actions for confirmed cases of COVID-19 in people in mandatory detention

The following actions should be taken:

- Residents with confirmed COVID-19 should be accommodated / cohorted in a separate section/floor of the hotel, away from the non-COVID passengers.

### Resident risks and wellbeing

#### Potential threats to health and wellbeing of people in mandatory detention

Potential risks associated with detention of returned travellers for compulsory 14-day quarantine can broadly be divided in physical or mental health risks.

| Physical risks                            | Mental health risks |
|---|---------------------|
| Transmission/development of COVID-19      | Family violence     |
| Transmission of other infectious diseases | Depression          |

|  |                             |
|--|-----------------------------|
| Other medical problems   | Anxiety                     |
| Diet – poor/imbalanced diet, food allergies/intolerances, over-consumption | Social isolation/loneliness |
| Lack of exercise   | Claustrophobia              |
| Lack of fresh air  | Drug and alcohol withdrawal |
| Smoking – nicotine withdrawal, risk of smoking within rooms/fire hazard    |                             |

### Conduct of a welfare check

A welfare check will allow passengers to be assessed for medical and social issues, and concerns flagged and responded to. These issues include but are not limited to health, mental health, safety and family violence concerns. A welfare check will be conducted by Authorised Officers which is included as a script at **Appendix 5**.

### Safety / mental health

If there are concerns about the safety or mental health of passengers, the process is as follows:

- The nurse will review via phone (or in person if required with appropriate PPE).
- If escalation is required, the nurse will **contact the Anxiety Recovery Centre Victoria for psychosocial support.**
- Mental health triage at RMH/the Alfred can be contacted as a back-up.
- If the person is acutely unwell or at serious risk, urgent ambulance should be arranged by calling 000.
- Daily welfare check phone calls should be implemented thereafter if not already implemented.

### Family violence (FV)

If there are concerns about family violence / the safety of women and children, the process is as follows:

- Case worker is called to review via phone initially or in person if required (with appropriate PPE).
- A separate room may need to be organised to facilitate the review away from the other family members.
- If deemed necessary, separate rooms should be organised to separate the family members.
- Case worker to review again as required.

### Alcohol and other drugs

If there are concerns about alcohol or other substance abuse or withdrawal:

- Consider nurse/medical review.
- Provide numbers for support services (listed below).
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.

## Tiers of risk for persons in mandatory detention

### Principles

- Residents will be triaged into three tiers of risk. The type of welfare check will depend on the tier the passenger falls into.
- For phone calls (tier 1 and tier 2), translators must be available as needed. Language requirements should be recorded on arrival at the hotel and provisions made as required.
- Automated text messages are sent to all passengers in tier 3 via Whispir.

- Residents may be moved between risk tiers throughout their quarantine period as need dictates.

| Risk Tier | Risk factors   | Welfare check type               |
|-----------|--|----------------------------------|
| Tier 1    | Residents with suspected or confirmed COVID-19<br>Families with children < 18 years<br>Passengers aged > 65 years<br>Aboriginal and Torres Strait Islander peoples<br>Residents with underlying comorbidities (e.g. respiratory or cardiac conditions) | Daily phone call                 |
| Tier 2    | Those who indicate they require a phone call but do not have any other risk factors.<br>Residents who are by themselves.   | Phone call every second day      |
| Tier 3    | Low risk – everyone else.  | Daily text message (via Whispir) |

### Priority areas for resident wellbeing

#### Diet

- Ensure a well-balanced diet with options provided for those with specific dietary requirements.
- Ensure access to essentials within the room (e.g. snacks, tea and coffee) to limit the amount of interactions/contact required with staff.
- Ensure access to additional food if required.

#### Exercise and fresh air

- If the room has a balcony, ensure the residents can access it for fresh air.
- Advise residents to open windows/balconies where possible for fresh air and ventilation.
- If it is possible for residents to go outside to take some exercise for organised/supervised short periods of time, this should be facilitated where possible. Residents should ensure physical distancing is practised during this period. Only well residents from the same room should be able to go out to exercise at the same time.
- Residents should be provided with resources for exercise routines and yoga/mediation that they can perform safely within their rooms.

#### Social and communications

- All residents should have access to **free** wifi/internet where at all possible.
- All residents should have access to entertainment such as television and streaming services (e.g. Netflix).
- All residents should have access to communications so that they can keep in regular contact with family and friends throughout the quarantine period.
- Toys and equipment should be provided for small children if possible.

#### Smoking policy for people in detention

As part of the emergency response to COVID-19, individuals have been confined within hotels while under quarantine. The movement of these people has been restricted to hotel rooms, without access to outdoor spaces, where they can smoke.

#### Current laws

Under the *Tobacco Act 1987* (Tobacco Act), smoking is prohibited in an "enclosed workplace", however, Section 5A (2) (g), provides an exemption for the personal sleeping or living areas of a premises providing accommodation

to members of the public for a fee. This means that, while a hotel is considered an enclosed workplace, the hotel could allow the occupants of the rooms to smoke if they choose.

In many cases, hotels have implemented their own smoke-free policies in rooms as the smoke is likely to enter the centralised air conditioning systems resulting in occupants of other rooms and staff being exposed to the smoke. Smoke also remains on the surfaces of the room and enters soft furnishings meaning that it remains in the room and exposes staff cleaning the room to the remaining residual smoke. The Department of Health and Human Services supports and encourages hotels to make their rooms smoke-free.

If smokers were to be permitted to leave their rooms for supervised smoke breaks, they would need to be taken to an area that does not constitute an enclosed workplace. This might be a balcony, roof top or other outdoor area. This area should preferably be away from open windows, doors and air conditioning intake points.

#### COVID-19 and smoking

The World Health Organization (WHO) has advised that any kind of tobacco smoking is harmful to the bodily systems, including the cardiovascular and respiratory systems, and puts smokers at greater risk in the context of COVID-19. Information from China, where COVID-19 originated, showed that people with cardiovascular and respiratory conditions, including those caused by smoking, were at higher risk of developing severe COVID-19 symptoms and death.

The Victorian Chief Health Officer has recommended that quitting smoking reduces the health risks associated with COVID-19.

#### Other examples of restricting access to smoking

There are some precedents of people being confined to facilities where they are unable to smoke. This includes mental health facilities, prisons and, if people are unable to leave, hospitals. In these circumstances, individuals are supported to manage cravings using pharmacotherapies such as nicotine replacement therapies.

#### Victoria's Charter of Human Rights and Responsibilities

Removing the ability to smoke would be compatible with the *Charter of Human Rights and Responsibilities Act 2006 (the Charter)*, as it would be for the purposes of protecting the right to life. Section 9 of the Charter states that "Every person has the right to life and to not have their life taken. The right to life includes a duty on government to take appropriate steps to protect the right to life."

#### Options

##### *Option 1: Provide support for smokers to quit or manage cravings (Recommended)*

The preferred option, for both the benefit of the individual and broader community would be to support smokers to quit or manage withdrawal while confined to their hotel room. This would mean that smokers be supported to manage cravings while they are unable to smoke but would not be forced to quit.

This could be easily managed through the provision of approved nicotine replacement therapies (NRT), with meal deliveries, accompanied by counselling through the Quitline. Quit Victoria has recommended a box of patches and an intermittent form of NRT such as a spray. These items are available for purchase without a prescription from a range of retailers including pharmacies and some big supermarkets.

Other pharmacotherapies, like zyban or champix, would require a prescription from a GP and are designed to help people completely quit as opposed to a short-term measure for people who are forced to stop smoking abruptly. These medications can take a while to take effect and, with champix, the advice is to continue smoking until it starts to impact on your cravings which means that it would not be an appropriate option for the circumstances.

Addiction to cigarettes includes both nicotine dependence and a behavioural and emotional dependence, which is why counselling plus pharmacotherapy is required. Someone who is heavily addicted will crave a cigarette every 45-60 minutes.

Telephone counselling is available via the Quitline - 13 78 48

Even if someone doesn't want to quit, Quitline can help them reduce the number of cigarettes they smoke.

People can also contact their regular general practitioner via telehealth.

*Option 2: Relax no smoking restrictions for the hotel rooms*

While it would be legally possible to enable people in quarantine to smoke in their rooms, this option is not recommended. This would have an adverse impact on hotels and their staff and goodwill in the circumstances. It would also increase the health risks of individuals potentially already at risk of COVID-19. When sharing a room with children, smoking should not be allowed.

*Option 3: Accompany individuals to leave the room to smoke*

While it would be possible to create a smoking area for people wishing to smoke, such as in an outdoor drinking area attached to a bar or restaurant facility, this option is not recommended. Allowing people to leave their hotel rooms to smoke undermines the quarantine restrictions being put in place. The individuals would need to be accompanied by security guards and might need to travel floors via lifts to access an outdoor area or leave the building.

Even if we assume, that the hotel is not currently operating for other customers, movement in the hotel creates an increased risk for staff and a need for greater vigilance in cleaning and maintaining distance.

Current policy for smokers in mandatory quarantine

The following actions should occur –

- Nicotine Replacement Therapy should be promoted strongly for smokers;
- Smoking restrictions should remain in relation to the room;
- Only where absolutely necessary, and in exceptional circumstances, a person in mandatory quarantine could be granted permission to leave their room under specific circumstances, where public health risk is managed:
  - The Authorised Officer is aware and grants permission;
  - They are accompanied by security, who are provided PPE to wear;
  - They are instructed to – and follow the instruction – not to touch surfaces en-route to the smoking area and coming back;
  - They return immediately to their hotel room.

**Other**

- All residents should be given the contact information for support services such as Lifeline at the beginning of their quarantine period (the information sheet they are provided with at the airport should also have these contact numbers).
- Residents should have access to fresh bedlinen and towels as required.
- Care packages may be permitted for delivery to residents under certain circumstances and subject to checks by AOs.
- Residents can be provided with up to three standard drinks per day if there is a risk of alcohol withdrawal (this is in preference to prescribing benzodiazepines for withdrawal).
- Other residents can also request alcoholic drinks as part of their food and drink provisions.
- Smoking breaks or NRT should be offered to all smokers if feasible.

**Personal protective equipment (PPE)**

Staff who engage with monitoring or assisting persons in mandatory detention in person:

1. Apply standard infection prevention and control precautions at all times:
  - a. maintain 1.5 metre distance
  - b. wash your hands or use anti-bacterial agents frequently
  - c. avoid touching your face.

2. Every situation requires a risk assessment that considers the context and client and actions required.
3. If you are not able to maintain a 1.5 metre distance and the person has symptoms (for example coughing) or is known to be a COVID-19 case use:
  - a. fluid-resistant surgical mask (replace when moist or wet)
  - b. eye protection
  - c. disposable gloves.
4. If you need to be in a confined space (<1.5 metre) with a known COVID-19 case for more than 15 minutes, wear a single use facemask, eye protection and gloves.

### **Temporary leave from the place of detention**

The Isolation (Diagnosis) Direction (made 25 March 2020) requires that persons in Victoria diagnosed with COVID-19 self-isolate in a premises (including use of a hotel room) until meeting departmental criteria for discharge and clearance from isolation permitted.

Persons diagnosed with COVID-19 and self-isolating are not permitted to leave the premises, except in the following three (3) circumstances:

1. *For the purposes of obtaining medical care or supplies –*
  - in particular circumstances, DHHS authorised officers and Victoria Police officers may need to determine if medical care is required and how urgent that care may be. DHHS officers may wish to discuss the detainee's medical needs with their manager or a departmental medical officer to assist in determining urgency
  - where possible, authorised officers or Victoria Police officers should attempt to provide the needed medical supplies. If not possible, detainees may be permitted to obtain medical supplies; the detainee should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and social distancing principles should be adhered to.
2. *In any other emergency situation –*
  - DHHS authorised officers and Victoria Police officers may need to determine the severity of any emergency (such as a building fire, flood, natural disaster etc) and the health risk they pose to detainees
  - if deemed that numerous detainees need to leave the premises due to an emergency, a common assembly point external to the premises should be utilised; detainees should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and social distancing principles should be adhered to
  - the accompanying DHHS authorised officer or a Victoria Police officer should ensure that all relevant detainees are present at the assembly point by way of a register of detainees.
3. *In limited outdoor circumstances when it is possible to avoid close contact with other persons and not to enter any other building:*
  - detainees may be permitted to leave their premises for outdoors temporarily; this may include the need for 'fresh air', a cigarette, a short walk etc
  - while temporarily outdoors, detainees are not permitted to enter any other building that is not their (self-isolating) premises
  - detainees should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and social distancing principles should be adhered to
  - a register of detainees should be utilised to determine which detainees are temporarily outside their premises at any one time.

### **Release from mandatory detention**

Checklist of considerations prior to release:

- Review the case file and ensure the 14 day detention has been met;

- Check the detainee meets the following – i.e. no symptoms of COVID-19 infection;
- Any physical checks of the room (damage, missing items, left items etc).

Supporting detainee to reach their preferred destination:

- DHHS organise for the detainee to be transported to their destination by completing a cab charge, Uber or whatever mode of transport.
- Release from isolation criteria are as per current DHHS Victoria guidelines (based on the SoNG).

### **Cleaning of rooms**

Housekeeping services will not be provided routinely to residents. Fresh linen, towels and additional amenities can be left outside of rooms for residents to then collect. Biohazard bags can be left for residents to place dirty linen in and to leave outside their rooms for collection. Terminal cleaning is required on vacation of each room.

## **Duties and Requirements**

### **DHHS duties**

Two activities must be completed by DHHS every day (Meena and Merrin):

- the legal obligation for being detained
  - The detention of each resident must be reviewed at least once every 24 hours for the period they are in detention, in order to determine whether the detention continues to be reasonably necessary to eliminate or reduce a serious risk to public health.
  - this can be via an AO looking over the database / spreadsheet to ensure they are meeting the legal obligations of detention.
  - this is not a call or face to face unless there is an issue that arises.
- Meeting our duty of care for detainment and completed regular (TBD) welfare check as per the **script designed by Di White (still to come)**.
- Legal requirement of transport to be organised at all times.

**Any queries/issues with AOs to go through Meena first.**

## **Policy on permissions and application of mandatory detention**

### **Objective of policy on permissions and application of 'exemptions'**

The term 'exemption' and this section of this plan is to guide judgment that a person does or does not require to be in mandatory detention, or when a person wants permission to leave their room.

### **Potential mechanisms for exemptions**

Noting that there are broadly two mechanisms available to the Public Health Commander to release a person from mandatory detention:

- The daily review by the authorised officer could find that detention is no longer required (with agreement of the Public Health Commander), or
- There could be permission given by the authorised officer (with agreement of the Public Health Commander) that a person has permission to leave the room in which they are detained.

The Public Health Commander could determine that detention should be served in an alternative location to a hotel, by writing a detention order to that effect.

### **Potential reasons for permission to leave detention**

There is a policy direction from the Deputy Chief Health Officer that permission to leave mandatory detention should be very rare and always based on an individual review of circumstances.

In the following circumstances there could be consideration of permission grant after an application to the Deputy Chief Health Officer however this will require permission:

- A person who has a medical treatment in a hospital;
- A person who has recovered from confirmed COVID-19 infection and is released from isolation;
- An unaccompanied minor (in some circumstances – see below);
- Instances where a person has a reasonably necessary requirement for physical or mental health or compassionate grounds to leave the room, as per the detention notice.

Note that NSW Health have exempted an 'unaccompanied child' from detention provisions in that state.

Note that the last category is highly subjective. This means it is the expectation of the authorising environment that exemption applications on those grounds are made on exceptional circumstances.

### **Process for considering requests for permission to leave or not have detention applied**

The Public Health Commander, through authorised officers, should properly consider a request for permission to leave a room where detention is being conducted, or an 'exemption'.

The process is:

- Members of the public who wish to ask for permission – including people who are in mandatory quarantine – have the option of submitting a request in writing to the COVID Directions inbox (i.e. in writing);
- Authorised officers should also use the COVID Directions inbox to submit requests for permission to be assessed;
- All requests for permission that are considered are logged on the secure MS Teams site established by Legal Services in a manner that can be audited and reviewed by any party in this compliance chain;
- The Director of Health Protection and Emergency Management (lead for COVID-19 Directions) who oversees the inbox and team managing this process assesses the merits of the individual proposal – including through delegates - and applies judgment as to whether the application should proceed to the next step;
- Requests will be reviewed in an initial assessment and will be assigned into three categories –
  - Priority 1 requests – where there is a same day urgency and importance is high;
  - Priority 2 requests – where there is complexity, lower urgency and / or medium urgency;
  - Priority 3 requests – where the authorised officer has determined that the exemption is rejected and will not proceed further. Logged.
- **A decision tool for authorised officers and officers of the department that are applying this process for recommendations to the chain of command is at Appendix.**
- After this initial assessment process, priority 1 requests will be:
  - Referred immediately to the Director E+C including with a short email summary including a recommendation;
  - The Director E+C submits the proposal to the Deputy Public Health Commander Planning with a recommendation, and calls the Deputy PHC Planning to discuss and alert the DPHC to the request, including legal service advice as needed;
  - Deputy Public Health Commander assesses the recommendation and then recommends the outcome required by the Public Health Commander;
  - Public Health Commander communicates the outcome and the Director E+C is authorised to enact the outcome.
- After this initial assessment process, priority 2 requests will be:
  - The Director HP+EM then submits in writing the application to the Director of Enforcement and Compliance with title 'For Decision: Detention Exception Request';
  - Captured in writing and batched together for consideration once a day for the review by a panel where available;
  - Where available, a **panel** could include a legal services representative, a delegate of the Director E+C and the DPHC Planning or delegate;

- The panel will then rapidly assess and decide on each priority 2 request;
- The outcome of the decisions (grant or reject) is then enacted by the Directions Cell, under the management of the Director HP+EM.
- After this process, priority 3 requests will be:
  - Officer of the department writes back to indicate the exemption has not been granted and should consider using scripts as provided at **Appendix 6**.

### **Policy on unaccompanied minors**

Instances where an unaccompanied minor is captured by a detention order must be managed on a case by case basis.

In general, there is a presumption that there are no exemptions granted to mandatory quarantine. The issues in relation to mandatory quarantine of unaccompanied minors include: where this occurs, and with what adult supervision.

Preliminary legal advice is that the State could issue a detention order to a person under 18 years who is unaccompanied outside the home (a person in the care of the state) if certain conditions are met. These must include:

- AO has to check in regularly;
- Person can easily contact parent / guardian;
- Has adequate food;
- Remote education is facilitated.

A draft detention notice is being put together by Legal Services should this be required.

#### When an unaccompanied minor normally resides outside Victoria

It is proposed that where there is no clear alternative, an unaccompanied minor who normally resides outside of Victoria may be facilitated to undertake detention in their normal home state of residence, with appropriate risk management of any possible exposures to others on a domestic flight out of Victoria to that state.

#### When an unaccompanied minor is normally resident in Victoria

It is proposed that an adult who supervises a minor must join that minor at a place of detention. If that occurs, the adult must then remain with that person in quarantine and should become the subject of a separate detention order so that this is enforced.

If an unaccompanied minor who normally resides in Victoria is unable to be joined by a parent / guardian (for example because that parent / guardian has other caring duties and cannot thus join the minor in detention) then on a case by case basis, an assessment will be undertaken to identify whether detention is to be served in the home. If that is determined to be appropriate after a risk assessment, the arrangement will involve:

- Issuing a detention order naming the specific home and / or parts of the home, and
- The detention order will be accompanied by advice on minimising risk of transmission to others in the home where the minor is detained (equivalent to advice to close contacts in quarantine); and
- An Authorised Officer will undertake a process to undertake a review each day in the manner required by the Act.

### **Potential non-compliance and escalation**

#### **Options to facilitate compliance**

The authorised officer may:

- Provide detainee opportunity to communicate including any request for a third-party communicator (such as translator);
- Issuing a warning if the detainee chooses not to comply with the requirements;

- Issuing a Penalty Infringement Notice ;
- Directing Victoria Police or accommodation security to physically detain the non-compliant individual for transfer to their secure site.

**Potential non-compliance and escalation**

If a DHHS authorised officer becomes aware that a detainee has left their premises for any reason not permitted, Victoria Police should be notified of the detainee's details, potential reasons for the detainee leaving, where they may have gone and whether they have returned to their (self-isolating) premises.

DHHS authorised officers may consider enforcement activity, dependant on the nature of any breach.

**Transfer of uncooperative detainee to secure accommodation**

Separate mode of transport for uncooperative detainees to secure site for 14-day isolation. Ensure appropriate safety measures are taken including child locks of doors and safety briefing for drivers etc.

**Unauthorised departure from secure accommodation**

If there is reason to believe a detainee is not complying with the notice of direction isolation requirement :

- Notify security or Police to check the detainee is in their room
- If the detainee has left their room, authorised officer/police/security to advise the detainee they are required to comply with the notice of direction isolation requirement.

## Communication and education

### Call centre for physical distancing queries

A call centre for public advice on physical distancing has been established. This will be staffed by authorised officers and managed by a Director Health Protection and Emergency Management.

The internal number is **(03) 9096 0609**, and it is open for calls from 8am to 8pm seven days a week. Members of the public should call 1800 675 398, and select Option 2.

A review of the workforce and escalation arrangements for this call centre is underway. [Sandy Austin, Ben Rimmer]

### Current communications with the Victorian public and health sector

The current collateral for the Victorian public and health sector to communicate on physical distancing requirements in Victoria includes items on the web and other locations:

#### Stay at home and restrictions:

- Coronavirus website homepage tile and webpage with detailed information on restrictions:
- [www.dhhs.vic.gov.au/stay-home-and-restricted-activities-directions-frequently-asked-questions](http://www.dhhs.vic.gov.au/stay-home-and-restricted-activities-directions-frequently-asked-questions)

#### Physical distancing and transmission reduction measures:

- Coronavirus website homepage tile and webpage with general information on physical distancing.
- [www.dhhs.vic.gov.au/coronavirus-covid-19-transmission-reduction-measures](http://www.dhhs.vic.gov.au/coronavirus-covid-19-transmission-reduction-measures)
- Uploadable Victorian physical distancing document in keeping with that tile's web content, located at TRIM HHSD/20/142098

#### State of emergency and directions:

- Coronavirus website tile and webpage with PDFs of the signed Directions.
- [www.dhhs.vic.gov.au/state-emergency](http://www.dhhs.vic.gov.au/state-emergency)

#### About coronavirus general information:

- Coronavirus website tile and webpage with general hygiene and physical distancing information.
- [www.dhhs.vic.gov.au/victorian-public-coronavirus-disease-covid-19](http://www.dhhs.vic.gov.au/victorian-public-coronavirus-disease-covid-19)

#### Media (proactive and reactive):

- Daily interviews and press conferences by the Chief Health Officer, Premier, Minister for Health and Ambulance and the Public Health Commander
- Daily media release from the department and Premier's office.

#### Social media posts on physical distancing

- Daily posts on DHHS and VicEmergency social media accounts.
- Live streams of press conferences on Facebook

#### Videos on physical distancing

- Series of Chief Health Officer videos on self-isolation, quarantine and physical distancing

## Appendix 1 - Standard emails and letter advice for compliance and enforcement

The following templates are generic and educative in nature. DHHS officers should adapt the tone and content according to risk and individual circumstances.

### Airport arrivals

Dear (insert name),

As you may be aware, Victoria's Minister for Health has declared a state of emergency throughout Victoria in response to the coronavirus or COVID-19 situation. Following this declaration, Victoria's Deputy Chief Health Officer has exercised emergency powers under the *Public Health and Wellbeing Act 2008* to make a direction to eliminate or reduce the serious risk to public health posed by COVID-19.

We are contacting you as Department of Health and Human Services has received information that you may be not complying with the Airport Arrivals direction issued by Victoria's Deputy Chief Health Officer.

Please be aware that: a person who arrives between 5 pm on 18 March 2020 and midnight on 13 April 2020 at an airport in Victoria on a flight that originated from a place outside Australia, or on a connecting flight from a flight that originated from a place outside Australia:

- must travel from the airport to a premises that is suitable for you to reside in for 14 days; and/or
- except in exceptional circumstances, must reside in a suitable premises for the period beginning on the day of your arrival and ending at midnight on the fourteenth (14th) day after arrival);
- must not leave the premises except:
  - for the purposes of obtaining medical care or medical supplies
  - in any other emergency situation circumstances where it is possible to avoid close contact with other persons; and
- must not permit any other person to enter the premises unless that other person usually lives at the premises, or the other person is also complying with this direction for the same 14 day period, or for medical or emergency purposes also complying with the CHO direction, or for medical or emergency purposes).

This email/letter seeks to inform you of your obligations. A copy of the direction and a fact sheet is attached to this email/letter.

### Why it is important to comply with the Chief Health Officer's direction

The Victorian Government is very concerned about the serious, and potentially catastrophic, risk to public health arising from COVID-19 throughout Victoria.

Persons entering Victoria are at an increased risk of COVID-19. That is why a person entering Victoria from overseas must self-isolate for a period of 14 days in accordance with the Deputy Chief Health Officer's direction. Failure to self-isolate in accordance with the Deputy Chief Health Officer's direction may increase transmission of COVID 19 within our community.

All Victorians play an important role in minimising the impact of COVID-19. We strongly encourage you to comply with the CHO's direction and appreciate your co-cooperation.

### Mass gatherings

Dear (insert name)

As you may be aware, Victoria's Minister for Health has declared a state of emergency throughout Victoria in response to the coronavirus or COVID-19 situation. Following this declaration, Victoria's Deputy Chief Health Officer has exercised emergency powers under the *Public Health and Wellbeing Act 2008* to make a direction to eliminate or reduce the serious risk to public health posed by COVID-19.

We are contacting you as Department of Health and Human Services has received information that you may be not complying with the Mass Gatherings direction issued by Victoria's Deputy Chief Health Officer.

Please be aware that:

- A person who owns, controls or operates premises in Victoria must not allow a mass gathering to occur on premises
- A person must not organise a mass gathering on premises in Victoria.

A mass gathering means:

- A gathering of five hundred (500) or more persons in a single undivided outdoor space at the same time; or
- A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.

A number of exclusions exist such as at an airport and a hotel, motel or other accommodation facility that is necessary for the normal operation of accommodation services.

This email/letter seeks to inform you of your obligations. A copy of the direction and a fact sheet is attached to this letter/email.

### **Why it is important to comply with the Deputy Chief Health Officer's direction**

The Victorian Government is very concerned about the serious, and potentially catastrophic, risk to public health arising from COVID-19 throughout Victoria.

The restrictions are designed to limit transmission of COVID in places where there is high density of individuals in close proximity. This is because many individuals have been identified as being infected with COVID-19 and more cases are expected.

All Victorians play an important role in minimising the impact of COVID-19. We strongly encourage you to comply with the CHO's direction and appreciate your co-cooperation.

## Appendix 2 – Evidence on physical distancing interventions for reducing impact of COVID-19

Last updated 27 March 2020

This document provides a review of evidence regarding the effectiveness of physical distancing interventions on the COVID-19 epidemic. As evidence is rapidly emerging this document may not contain all relevant available information. It also contains some references to reports and pre-prints that have not undergone peer-review. Therefore, caution should be taken in interpretation. Furthermore, as new evidence emerges the picture of the effectiveness will change. This document will be updated to reflect the changing evidence base.

### Introduction

Physical distancing between people aims to minimise interactions between people to limit the opportunities for disease to spread from an infected person to an un-infected person. It is an example of a non-pharmaceutical intervention (NPI) that can be employed to control a disease outbreak. Measures to bring about physical distancing amongst populations have been utilised in previous efforts to control influenza epidemics and pandemics.

Observational and modelling studies have provided evidence to help guide the use of physical distancing measures for influenza. Although these can provide some insight into how we might expect physical distancing to influence the progression of the COVID-19 pandemic, COVID-19 has its own disease characteristics which will influence the impact of physical distancing measures. Evidence of the impact of social distancing is beginning to emerge from countries in which the epidemic commenced earlier than in Australia, particularly China. Additionally, modelling studies using information on the epidemiological features of COVID-19 are estimating the impact of different physical distancing measures.

This review consists of three parts:

- A review of the epidemiological features of COVID-19 and their implications for physical distancing in COVID-19
- A review of modelling analyses estimating the effects of physical distancing on the COVID-19 epidemic
- A review of evidence regarding physical distancing measures in the setting of pandemic influenza

## 1. Epidemiological features of COVID-19 that impact the effectiveness of physical distancing measures

### 1.1 Reproductive number

The basic reproductive number ( $R_0$ ) is the number of individuals a single infected individual will infect in an otherwise fully susceptible population. This value will be influenced by features inherent to the pathogen, and characteristics of the population, such as population density and the nature and frequency of human-human interactions. As such, there is no single true value of  $R_0$  for any disease, including COVID-19, as it will be influenced by population-specific factors.

Published estimates of  $R_0$  for COVID-19 have ranged between 2.1 and 3.58. (1–6)

### 1.2 Modes of transmission

Early evidence suggests that SARS-CoV-2 (the virus that causes COVID-19) is primarily transmitted via respiratory droplets transmitted during close contact, and via fomites. (7) However, there is evidence of viral shedding in faeces (8) and viral persistence in aerosols (9,10), suggesting that aerosol and faecal-oral transmission may also occur. Transmission may also be possible via ocular surfaces. (11)

### 1.3 Timing of transmission

Analyses of viral shedding suggest that the time of peak viral load is early in the course of illness, around the time that symptoms develop, and that viral load then reduces over time. (10) The median duration of detected viral shedding of 191 patients in Wuhan was 20.0 days (IQR: 17.0-24.0 days) in survivors. (12) Importantly, these

measurements of viral load cannot distinguish infectious from non-infectious virus. Although the two types of virus are often correlated early in influenza, we cannot say for sure for whether the same holds for COVID-19 at this stage.

Evidence from case and cluster reports (13–15), and several epidemiological analyses (16–19) suggest that COVID-19 can be transmitted prior to the onset of symptoms.

#### **1.4 Incubation period**

An analysis of 55,924 laboratory-confirmed cases, found the mean incubation period was estimated to be 5.5 days. (7) Another analysis of 181 confirmed cases outside of Hubei Province found the mean incubation period to be 5.1 days (95% CI: 4.5-5.8 days). (20)

#### **1.5 Duration of illness**

An analysis of the clinical course of 52 critically ill adult patients with SARS-CoV-2 pneumonia who were admitted to the intensive care unit (ICU) of a Chinese hospital in late December 2019 and January 2020, found the median time from symptom onset to death was calculated to be 18 days. (21)

#### **1.6 Demographic features of COVID-19**

In general, COVID-19 causes a much more severe illness in older people, with case-fatality rates increasing with age, particularly for those aged 80 years and older. (7,22)

Children have thus far accounted for few cases of COVID-19 and are unlikely to have severe illness. (23) However, the role of children in transmission of COVID-19 remains unclear. In a pre-print analysis of household contacts of cases, it was found that children were infected at the same rate as older household contacts. (24) In the report of the WHO-China joint mission it was noted that children accounted for 2.4% of cases, that infected children had largely been identified through contact tracing, and there was no recollection of episodes of transmission from child to adult. (7)

#### **1.7 Overview of the impact of key epidemiological features for physical distancing interventions**

Key points arising from these epidemiological features are:

- COVID-19 is highly transmissible, and although close contact is more likely to result in transmission, transmission may be possible from minor contact, or through contact with infectious surfaces
- The COVID-19 epidemic in many areas is following exponential growth patterns, so case counts can be expected to rise rapidly
- As evidence suggests that people can transmit COVID-19 prior to the onset of symptoms, and because infectiousness appears to be highest at the time of symptom onset, isolating cases at the point of symptom onset may be inadequate to prevent transmission
- As there is a delay between infection and symptom onset and a delay between symptom onset and case detection, there will be a delay (of roughly 10 days) between implementation of an intervention and seeing its impact on case counts
- As there is a delay between symptom onset and death, there will be an even longer delay to seeing the impact of interventions on death rates (up to two weeks)
- The role of children in COVID-19 transmission remains unclear and would have significant implications for the effect of school closures on the epidemic

## **2. Modelling studies evaluating potential impact of physical distancing interventions for COVID-19**

### **2.1 Modelling the impact of physical distancing interventions**

This will be updated.

### 2.1.1 Imperial College report on non-pharmaceutical interventions

Ferguson et al of Imperial College published a report estimating the impact of a range of non-pharmaceutical interventions (physical distancing interventions) on the COVID-19 epidemic in the UK and the US. (26) Effects of different combinations of population-level interventions were reviewed. The report describes two alternative strategies: suppression and mitigation. It describes suppression as aiming to reduce the R value to less than 1, resulting in transmission ceasing in the population. Mitigation, however, aims to reduce the impact of the epidemic, whilst infection builds up in the community, rather than causing transmission to cease. Actions towards mitigation would include preventing infection amongst those most vulnerable to severe disease and slowing the rate of infection.

The report suggests that an approach of mitigation would result in the critical care capacity being overwhelmed many times over, resulting in hundreds of thousands of deaths. Only a combination of very strong measures taken together (including case isolation, household quarantine, general social distancing, school and university closure) is predicted to avoid critical care capacity being overwhelmed.

The report suggested that if suppression is being pursued, then earlier implementation is better, but if mitigation is being pursued then it is better to implement interventions closer to the peak of the epidemic. School closures were estimated to have a greater role on a suppression strategy, rather than mitigation. The modelling also suggested that relaxing the intervention whilst the population remained susceptible would result in a later, large peak that would also overwhelm critical care capacity, suggesting that policies may need to remain until a vaccine was available.

The report concluded that suppression seemed the only viable option, given that mitigation would result in health care capacity being overwhelmed many times over. However, they noted the uncertainty in whether a suppression approach could be achieved, as well as the uncertainty in modelling estimates.

### 2.1.2 Early modelling analysis from Australia

A modeling analysis, published as a pre-print, conducted by Australian researchers, Chang et al (27) suggested that the best intervention strategy is a combination of restriction on international arrivals to Australia, case isolation, and social distancing with at least 80-90% compliance for a duration of 13 weeks. They noted that compliance levels below this would lengthen the duration of required suppression measures. They also note that resurgence of disease is possible once interventions cease, and their analysis does not attempt to quantify the impact of measures beyond the 28-week horizon of analysis.

Another Australian pre-print analysis by Di Lauro et al (28) reviewed the optimal timing for “one shot interventions”, interventions that are assumed to only be able to implemented once in the course of an epidemic and for a finite time period. This suggested that optimal timing depended on the aim of the intervention; that to minimise the total number infected the intervention should start close to the epidemic peak to avoid rebound once the intervention is stopped, while to minimise the peak prevalence, it should start earlier, allowing two peaks of comparable size rather than one very large peak.

### 2.1.3 Modelling the impact of physical distancing interventions in China

Using a stochastic transmission model and publicly available data, Kucharski et al (29), estimated the effect of the distancing interventions introduced in China on the 23rd of January. the median daily reproduction number ( $R_t$ ) in Wuhan declined from 2.35 (95% CI 1.15–4.77) 1 week before travel restrictions were introduced on Jan 23, 2020, to 1.05 (0.41–2.39) 1 week after.

An pre-print analysis by Lai et al (30) suggested that without the non-pharmaceutical intervention implemented in China (early detection and isolation of cases, travel restrictions and reduction of interpersonal interactions) the number of infections in Wuhan would have been many fold higher. They suggested that had the NPIs been conducted one week, two weeks, or three weeks earlier in China, cases could have been reduced by 66%, 86%, and 95%, respectively. They also suggested that social distancing interventions should be continued for the next few months to prevent case numbers increasing again after travel restrictions were lifted on February 17, 2020.

A pre-print analysis by Prem et al (31) reviewed the impact of China's interventions on social-mixing patterns and estimated the effects of different approaches to lifting the interventions. They suggested that control measures aimed at reducing social mixing can be effective in reducing the magnitude and delaying the epidemic peak. They suggested the interventions would have the most impact if continued until April, and if return to work was staggered. These results were sensitive to the duration of infectiousness and the infectiousness of children.

## **2.2 Modelling the potential impact of case isolation and contact tracing**

An analysis by Hellewell et al (32) considered the possibility of controlling a COVID-19 outbreak with contact tracing and case isolation alone. Under some parameter assumptions it was possible to control the outbreak without the need for physical distancing measures. However, the probability of controlling the outbreak in this way decreased with an  $R_0$  of 2.5 or 3.5, when there was a larger initial infectious population, a longer delay to case detection and a larger proportion of pre-symptomatic transmission. The study concludes that "in most plausible outbreak scenarios, case isolation and contact tracing alone is insufficient to control outbreaks, and that in some scenarios even near perfect contact tracing will still be insufficient, and further interventions would be required to achieve control."

A pre-print analysis by Kretzschmar et al (33), suggests it is unlikely that case isolation and contact tracing alone could control a COVID-19 outbreak. They note that if delay between onset of infectiousness and isolation is more than 4 to 6 days, or the proportion of asymptomatic cases is greater than 40% the outbreak cannot be controlled even with perfect tracing. However, they note that contact tracing efforts can still be a valuable tool in mitigating the epidemic impact.

## **2.3 Modelling the impact of school closures for COVID-19**

An early report from Di Domenico et al (34), used data from three French towns with COVID-19 outbreaks and assumed children had a susceptibility to COVID-19 of 20% relative to adults and relative infectiousness of 50%. With these assumptions they suggested that school closure alone would have limited benefit in reducing the peak incidence (less than 10% reduction with 8-week school closure for regions in the early phase of the epidemic). However, when coupled with 25% adults teleworking, 8-week school closure would be enough to delay the peak by almost 2 months with an approximately 40% reduction of the case incidence at the peak.

## **3. Evidence on physical distancing measures for pandemic influenza**

There are important differences between the COVID-19 pandemic and previous influenza pandemics. Three important differences are:

- It is well established that school children play a major role in spreading influenza virus because of higher person-to-person contact rates, higher susceptibility to infection, and greater infectiousness than adults. In contrast, children have accounted for fewer cases in the COVID-19 pandemic and their role in transmission is unclear.
- Pandemic influenza is thought to have a shorter incubation period (approximately 2 days) compared to COVID-19 (approximately 5 days).
- There is likely a greater proportion of severe and critical cases of COVID-19, than in pandemic influenza. (35)
- However, the evidence regarding physical distancing measures on influenza pandemics may still provide some insight into the role they may play in the response to COVID-19.

A recent review (prior to the COVID-19 outbreak) by Fong et al (36) surveyed the evidence for NPIs in pandemic influenza, in particular the effects of school closures, workplace measures and avoiding crowding.

### **3.1 School closures**

They found compelling evidence that school closure can reduce influenza transmission, especially among school aged children. However, the duration and optimal timing of closure were not clear because of heterogeneity of data, and transmission tended to increase when schools reopened.

A correlation analysis between weekly mortality rates and interventions (which included school closure) during the 1918–19 pandemic in cities in the United States estimated that early and sustained interventions reduced mortality rates by  $\leq 25\%$ . (37)

Two studies conducted in Hong Kong as a public health response to the 2009 influenza A(H1N1) pandemic estimated that school closures, followed by planned school holidays, reduced influenza transmission. (38,39)

Two studies conducted in Japan estimated that due to reactive school closures the peak number of cases and the cumulative number of cases in the 2009 pandemic were reduced by  $\approx 24\%$  (40) and 20% (41). However, two studies (one evaluating the response to the 2009 pandemic and the other seasonal influenza) estimated that reactive school closures had no effect in reducing the total attack rate and duration of school outbreaks, and the spread of influenza. (42,43)

It is important to note that school closures can have a disproportionate impact on vulnerable groups (eg low-income families), particularly when meals are provided by schools. This could be ameliorated by dismissing classes but allowing some children to attend schools for meals or enable parents to work. It has also been noted that school closures may have an impact on health workforce availability, as health care workers may have to care for children.

### 3.2 Workplace interventions

A systematic review of workplace measures by Ahmed et al (44) concluded that there was evidence, albeit weak, to indicate that such measures could slow transmission, reduce overall attack rates or peak attack rates, and delay the epidemic peak. In this review, epidemiological studies reviewed the effects of segregating persons into small subgroups and working from home. Modelling studies most frequently simulated the effects of workplace measures as reducing contacts by 50%.

In this review, for studies modelling  $R_0 \leq 1.9$ , workplace social distancing measures alone (single intervention) showed a median reduction of 23% in the cumulative influenza attack rate in the general population. Workplace social distancing measures combined with other nonpharmaceutical interventions showed a median reduction of 75% in the general population. However, the effectiveness was estimated to decline with higher  $R_0$  values, delayed triggering of workplace social distancing, or lower compliance.

Paid sick leave could improve compliance with a recommendation to stay away from work while ill. (45,46)

### 3.3 Avoiding crowding

The review by Fong et al (36) identified three studies that assessed the effects of measures to avoid crowding (such as bans on public gatherings, closure of theatres) in pandemic influenza. These suggested that such measures helped to reduce excess mortality in the 1918 pandemic and a natural study comparing the effect of accommodating pilgrims for World Youth Day in smaller groups rather than a large hall reduced transmission in 2008.

### Script

Good morning / afternoon, I'm XXX. Can I confirm who I'm speaking with?

|  |
|--|
|  |
|  |

I am working with the Department of Health and Human Services to support people in quarantine following their arrival in Australia, and I'm giving you a call to check on your welfare. We know that this may be a stressful time for you, and our aim is to make sure that you are as comfortable as you can be during this quarantine period.

I am a Victorian Public Servant and any information that you provide to me is subject to privacy legislation.

We will be checking in with you and the people you have been travelling with every 24 hours to make sure that you are ok and to find out if you have any health, safety or wellbeing concerns that we can address.

There are 23 questions in total, and it should take only a few minutes to go through these with you. When you answer, we would like to know about you as well as any other occupants in your room.

If you have needs that require additional support, we will connect you with another team who can provide this support.

### Introductory questions

1. Are you still in Room XXX at the hotel? Circle YES / NO

|  |
|--|
|  |
|--|

|  |
|--|
|  |
|--|

2. Are you a lone occupant in your hotel room? Yes/No if No:

a. Who are your fellow occupants, including your partner or spouse, children or fellow travellers?

| Name | Relationship | Age<br>(children/dependents) |
|------|--------------|------------------------------|
|      |              |                              |
|      |              |                              |
|      |              |                              |

3. Have you or your fellow occupants had to leave your room for any reason? If so, what was the reason? YES /NO

|  |
|--|
|  |
|  |
|  |
|  |

#### Health questions

4. Have you had contact with a medical staff nurse whilst in quarantine? If yes, can you please provide details and is it being monitored?

|  |
|--|
|  |
|  |

5. Have you or your fellow occupants had any signs or symptoms of COVID-19, including fever, cough, shortness of breath, chills, body aches, sore throat, headache, runny nose, muscle pain or diarrhoea)?

|  |
|--|
|  |
|  |

6. Do you or anyone you are with have any medical conditions that require immediate support? (ie smokers requiring nicotine patches)

|  |
|--|
|  |
|  |

7. Do you, or anyone in your group (including children) have any immediate health or safety concerns?

|  |
|--|
|  |
|  |

8. Do you have any chronic health issues that require management?

|  |
|--|
|  |
|  |
|  |
|  |

9. Do you or anyone you are with have enough prescribed medication to last until the end of the quarantine period?

|  |
|--|
|  |
|  |

10. Are you keeping up regular handwashing?

|  |
|--|
|  |
|  |

11. What sort of things help you to live well every day? For example, do you exercise every day, do you eat at the same time every day?

|  |
|--|
|  |
|  |
|  |
|  |

### Safety questions

12. How is everything going with your family or the people you are sharing a room with?

|  |
|--|
|  |
|  |
|  |
|  |

13. Is there anything that is making you feel unsafe?

|  |
|--|
|  |
|  |
|  |
|  |

14. Are there any concerns that you anticipate in relation to your own or other occupant's safety that might become an issue in the coming days?

|  |
|--|
|  |
|  |
|  |
|  |

*If the person answers yes to either question 10 or the one above, you could say:*

- You have identified safety concerns -would you like me to establish a safe word if you require additional support regarding your safety?

If yes...

- The word I am providing is <xxx> (different word for each individual). You can use that word in a conversation with me and I will know that you need immediate support/distance from other occupants in the room or may be feeling a high level of distress.

*Where family violence, abuse or acute mental health is identified as an issue refer to specific guidance / escalate for specialist support.*

### **Wellbeing questions**

15. How are you and any children or other people that you are with coping at the moment?

|  |
|--|
|  |
|  |
|  |

16. Do you have any immediate concerns for any children / dependents who are with you?

|  |
|--|
|  |
|  |

17. Do you have any additional support needs that are not currently being met, including any access or mobility support requirements?

|  |
|--|
|  |
|  |

18. Have you been able to make and maintain contact with your family and friends?

|  |
|--|
|  |
|  |

19. What kind of things have you been doing to occupy yourself while you're in isolation, e.g. yoga, reading books, playing games, playing with toys?

|  |
|--|
|  |
|  |

20. Have you been able to plan for any care responsibilities that you have in Australia? Can these arrangements be maintained until the end of the quarantine period?

|  |
|--|
|  |
|  |

### Final

21. What has the hotel's responsiveness been like? Have you had any trouble getting food, having laundry done, room servicing etc.?

|  |
|--|
|  |
|  |

22. Do you have any other needs that we may be able to help you with?

|  |
|--|
|  |
|  |

23. Do you have any other concerns?

|  |
|--|
|  |
|  |

### End of survey

Thank you for your time today. We will contact you again tomorrow.

## Appendix 6 – Decision tool for exemption requests for people in mandatory quarantine

INSERT MATRIX - REDACTED

The following vulnerability assessment matrix will help officers consistently triage or reach safe decisions as to whether an exemption request is a priority 1 (urgent), priority 2 (less urgent) or priority 3 (not accepted / rejected).

The Public Health Commander may identify specific instances where an exemption request must always be classified as Priority 1 and as such generates an urgent assessment. Current instances where this determination has been made are:

- A medical emergency in a person in mandatory detention (such as acute chest pain consistent with an acute myocardial infarction);
- An unaccompanied minor where there is no identified legal guardian and in exceptional circumstances.

## **Appendix 7 – Scripts for physical distancing call centre**

Detail to be added about certain scenarios, including for funeral-related questions.

## Draft Physical Distancing Plan - 31 March 2020

---

Dear colleagues

Thank you all for great work today.

Please let me know if there are any major omissions.

We should aim to land simple but strong content in the aspects marked up as gaps and then put it up for preliminary approval.

Note it is absolutely iterative, but most elements are close to landed.

A strong request from me and Annaliese – lets keep all aspects inside this plan, and avoid separate protocols.

All the available protocols have been fully incorporated. A few police protocols to get in there and we've almost made it.

**More focus needed tomorrow to support:**

- **Social distancing call centre function**
- **Land 'exemptions' process and flow**
- **Go live with business system and PHESS to support enforcement and compliance**
- **Protocols to assist police getting in the plan**

Any and all work to land this I'll incorporate into the plan  
Finn

## Current workplan for physical distancing

The following workstreams are in place, detailing next deliverables over the next 48 hours (ending close of business 1 April 2020) –

### Compliance and enforcement

1. Directions and exemptions – REDACTED (Sean)
  - a. Exemptions handling protocol (REDACTED)
2. Authorised officer workforces – Noel Cleaves
  - a. Workforce plan for authorised officers - size, source, roster – Noel
3. Police protocols – REDACTED
  - a. Protocol for working with Victoria Police for compliance – REDACTED
4. Mandatory quarantine policy and welfare – Merrin Bamert
  - a. Data management plan for detained persons (Matthew McCrone / Charles Alpren)
  - b. Medical plan REDACTED
  - c. Testing plan REDACTED
  - d. Hospital and ambulance transfer plan REDACTED
  - e. Smoking policy (Maria Bubnic) MARIA
  - f. Exercise policy (Maria Bubnic) MARIA
5. Social distancing public advice line oversight – Merrin Bamert
  - a. Listing of resources to support the call centre and workforce plan REDACTED
6. Data management to support compliance – Charles Alpren / REDACTED
  - a. Data pathway for new arrivals information into PHESS (Charles / REDACTED)
  - b. Provision of compliance priority groups to Victoria Police (Charles)
7. Electronic compliance support tools – Fiona Sparks
  - a. Whispr management protocol
  - b. Tracking options

## Background

In Victoria, the term ‘physical distancing’ will be used, in preference to the term ‘social distancing’.

A recent summary of the value of social distancing in relation to the COVID-19 emergency was given as:

*“Social distancing is one of the key measures currently being utilised to contribute to Australia’s ability to severely limit transmission of COVID-19. This reduces the burden of disease in the community, and importantly, will ensure healthcare capacity is not overwhelmed at any given time. The health sector must continue to undertake its core functions, as well as maintain the capacity to support those with COVID-19 who require more intensive care.*

*The overarching goal of our recommendations is to slow the spread of the virus and flatten the epidemic curve. We all have both a community and individual responsibility to maintain social distancing and minimise interactions in order to protect the people we love. The aim is a population response, to reduce transmission to protect vulnerable populations.”*

## Purpose

This plan intends to:

- Provide clarity to all parts of the Department of Health and Human Services’ (the department’s) physical distancing response to coronavirus disease 2019 (COVID-19);
- Describe the strategy and protocols for the physical distancing response;
- Describe the compliance and enforcement policy for all directions, including mandatory detention policy;
- Inform internal and external communications collateral around physical distancing.

## Scope

In scope for this policy are:

- Physical distancing interventions in Victoria;
- Quarantine and isolation interventions in Victoria implemented for any reason.

## Authorising environment

### Chief Health Officer and Deputy Chief Health Officer

Under a state of emergency declared by the Victorian Government, the Chief Health Officer and Deputy Chief Health Officer have exercised powers to make a range of Directions that reflect physical distancing controls in Victoria, as described in Annexes to this plan.

### National Cabinet

National Cabinet for COVID-19 has released statements of policy on social distancing (physical distancing). These are reported to have been based on advice from the Australian Health Protection Principal Committee (AHPPC). The AHPPC releases its advice in statements which are published online.

### Victoria Police

Advice has been sought from Legal Services as to the role of Victoria Police. As of 31 March 2020, Victoria Police will undertake a greater role in managing compliance in the community including issuing of infringement notices.

### Governance of physical distancing policy within the DIMT

A Physical Distancing Cell will be chaired by the Deputy Public Health Commander – Planning, on behalf of the Deputy Chief Health Officer (Public Health Commander). This will include:

- a communications lead;

- an enforcement and compliance lead, and
- an evidence and policy lead.

## Policy on control measures for physical distancing

### AHPPC recommendations to National Cabinet

#### Statements by AHPPC

The Australian Health Protection Principal Committee (AHPPC) have made a number of statements on the matter of physical distancing (social distancing). These are available at TRIM location HHSF/20/7891, and on the web at <https://www.health.gov.au/news/latest-statement-from-the-australian-health-protection-principal-committee-ahppc-on-coronavirus-covid-19-0>

Statements with content directly bearing on social distancing include the following statements with media event dates and date of the statement. The most recent AHPPC statement was 30 March 2020.

### National requirements from National Cabinet

The National Cabinet has made announcements through the Prime Minister, including a statement relating to social distancing on 24 March and as recently as 30 March 2020.

### Legal directions in Victoria

#### Directions work within legal services

A team within the department's Legal Services Branch has been established, including order to draft Directions under the state of emergency, for the Chief Health Officer or Deputy Chief Health Officer. The Legal Services Branch is not available to provide third party legal advice on Directions and their compliance or otherwise.

#### Process for creating Directions

The process involves a number of steps, some of which are iterative as the policy underlying the Direction is developed.

These steps include – but are not limited to –

- Policy area develops a need for a Direction under the state of emergency;
- Legal services commence work to create instructions;
- Secretary finalises required directions content to Legal Services;
- Legal Services instructs parliamentary counsel to draft instructions;
- Final check undertaken with Chief Health Officer or Deputy Chief Health Officer;
- Direction is signed;
- Direction is published on the webpage.

#### Critical step in creation of Directions

The Deputy Chief Health Officer has identified a minimum requirement for an evidence-informed policy rationale to be recorded prior to the issuing of directions, and that this evidence-informed rationale extends beyond the general observation of a state of emergency having been declared. Such a short evidence summary could be produced by the Intelligence function.

#### Directions

At the current time, Directions are signed by Dr Annaliese van Diemen (Deputy Chief Health Officer) and Dr Brett Sutton (Chief Health Officer).

Consideration is being given to expanding the list of authorised officers who can sign directions to include other Senior Medical Advisors within the response who are Authorised Officers.

### List of Directions

The following directions are displayed on the department's website publicly at <https://www.dhhs.vic.gov.au/state-emergency> and were made by the Deputy Chief Health Officer or Chief Health Officer:

- *Direction on airport arrivals (Annex 1) – 18 March 2020 (revoked 30 March 2020 - still displayed for reference);*
- *Direction on cruise ships docking (Annex 2) – 19 March 2020 (revoked 30 March 2020 - still displayed for reference);*
- Direction on aged care (Annex 4) – 21 March 2020;
- Direction on hospital visitors (Annex 6) – 23 March 2020;
- Direction on isolation (diagnosis) – 25 March 2020;
- Direction on revocation of airport arrivals and cruise ship directions – 28 March 2020;
- Direction on stay at home – 30 March 2020;
- Direction on restricted activity – 30 March 2020;
- Direction on detention notice – Undated (first posted 28 March 2020).

### Summary of legally required actions in Victoria regarding physical distancing (must)

The Directions in place are available online, and at the TRIM location HHSF/20/7901.

The summary of the key requirements in all six active directions, across four themes, is below (linking to the Direction itself for more detail).

#### Directions on visitors to aged care facilities – 21 March 2020

- Prevents entering or visiting aged care facilities unless goods and services are necessary, and if the person meets criteria for a suspected case or is ill or is not up to date with vaccination or is under 16;
- Some exemptions including employee, care and support, end of life visit.

#### Directions on hospital visitors – 23 March 2020

- Prohibits non-essential visits to hospitals, including for categories of patients, workers and visitors;
- Exceptions include patients. Exemptions can be granted.
- Prohibits non-essential business operation from noon on 23 March 2020, including for pubs, hotels, gyms,

#### Directions on isolation – 25 March 2020

- Prohibits movement out of isolation until DHHS clear the person but allows a person not in their home to go directly there after diagnosis.

#### Direction on stay at home – 30 March 2020

- Restricts the way by which people can leave their home making an effective requirement to stay at home except in certain circumstances, restricts gatherings to two people in most instances with some exceptions.

#### Direction on restricted activity – 30 March 2020.

- Expands restrictions on certain businesses and undertakings put in place as part of non-essential activities restrictions, for example to include playgrounds.

#### Direction – detention notice – 27 March 2020

- Orders the detention of all persons who arrive into Victoria from overseas on or after midnight on 28 March 2020, requiring they be detained in a specified room in a hotel, with only limited reasons wherein leaving the room can be allowed.

### Directions that have been revoked

The following Directions were **revoked** on 25 March 2020 at midnight:

#### *Direction on airport arrivals -18 March 2020*

- *Anyone who arrives at an airport in Victoria on a flight that originated from a place outside Australia, or on a connecting flight from a flight that originated from a place outside Australia must self-quarantine for 14 days after arrival, if arrived after 5pm on 18 March 2020;*
- *Sets rules on being in quarantine – cannot leave home except in an emergency and cannot allow people to enter unless they live there.*

#### Directions on cruise ship docking – 19 March 2020

- *Anyone who disembarks at a port in Victoria from an international cruise ship or an Australian cruise ship (which is on a voyage from a port outside Australian territory) must self-quarantine for 14 days after arrival.*
- *Allows for some exceptions (goes interstate directly, or to hospital).*

#### Directions on mass gatherings – 21 March 2020

- *Non-essential mass gatherings are prohibited (not allowed to be organised, allowed or attended). A mass gathering means:*
  - *A gathering of five hundred or more persons in a single undivided outdoor space at the same time;*
  - *A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.*
- *In addition, the total number of persons present in the indoor space at the same time does not exceed the number calculated by dividing the total area (measured in square metres) of the indoor space by 4, meaning a limit of one person per four square metres (2x2m).*
- *Many specified exemptions, including for some forms of transport, schools, prisons, Parliament or where CHO or DCHO issue an exemption.*

#### Directions on non-essential business closure – 23 March 2020

- *Prohibits non-essential business operation from noon on 23 March 2020, including for pubs, hotels, gyms, places of worship, other specified businesses;*
- *No exemptions process is specified – it is an inclusive list.*

#### Directions on prohibited gatherings – 25 March 2020

- *Non-essential gatherings are prohibited from midnight on 25 March 2020 – not to be organised, allowed or attended.*
- *Adds two additional prohibited mass gatherings which are social sport gatherings and weddings and funerals.*
- *Specifies a density quotient, with examples.*
- *A mass gathering means:*
  - *A gathering of five hundred or more persons in a single undivided outdoor space at the same time;*
  - *A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.*
- *Many specified exemptions, including social sport gatherings (two or more people), weddings, and funerals (no more than 10 people – indoors or outdoors), some forms of transport, schools, prisons, Parliament or where CHO or DCHO issue an exemption.*
- *Allows for exemptions to be asked for and granted.*

#### Directions on non-essential activities – 25 March 2020

- *Prohibits categories of non-essential activity;*
- *Adds requirement for signage, cleaning and disinfection on businesses that remain open;*
- *Includes prohibition on licensed premises, personal training facilities, outdoor personal training limited to ten persons, entertainment facilities, non-essential retail facilities, food and drink facilities, accommodation facilities, swimming pools, animal facilities, auctions;*
- *Exceptions include essential public services such as food banks, wedding venues, recording of performances, time-limited haircuts, delivery of goods, densely packed markets (density rule), food and drink facilities in certain places (hospitals for example); some types of accommodation facility.*

## Announced stages of restrictions in Victoria

### Stage 1 restrictions

Victoria announced 'stage 1 restrictions' on 22 March 2020 and 23 March 2020 and implemented effective midday 23 March 2020 . These included:

- Bringing school holidays forward to commence starting on Tuesday 24 March
- Ceasing non-essential business activity including:
  - pubs, bars or clubs, or hotels (other than to operate a bottleshop, take-away meals or accommodation),
  - gyms,
  - indoor sporting centres,
  - the casino,
  - cinemas,
  - nightclubs or entertainment venues of any kind,
  - restaurants or cafes, other than to the extent that it provides takeaway meals or a meal delivery service
  - places of worship, other than for the purposes of a wedding or funeral.

<https://www.premier.vic.gov.au/statement-from-the-premier-32/>

<https://www.premier.vic.gov.au/statement-from-the-premier-33/>

<https://www.premier.vic.gov.au/wp-content/uploads/2020/03/200323-Statement-From-The-Premier-1.pdf> (this includes a copy of the Deputy Chief Health Officer direction)

### Stage 2 restrictions

Stage 2 restrictions were announced on 25 March 2020. Further to the stage 1 restrictions, these include:

- Ceasing operation of
  - Recreation facilities (indoor and recreation facilities, personal training facilities, community centres and halls, libraries, galleries and museums, youth centres and play centres (other than for essential public services)
  - Entertainment facilities (in addition to entertainment facilities already covered in stage 1, stage 2 added theatres, music and concert halls, auditoriums, arenas, stadiums, convention centres, arcades, amusement parks, gambling businesses, brothels, sex on premises venues, and strip clubs)
  - Non-essential retail facilities (beauty and personal care, auction houses, market stalls - other than for the provision of food and drink and subject to density provisions)
  - Food and drink facilities (in addition to stage 1, stage 2 added fast food stores, cafeteria's and canteens, and food courts) but maintaining the ability to provide take away
  - Camping grounds and caravan parks
  - Swimming pools (other than private pools not for communal use)
  - Animal facilities (zoos including petting zoos, wildlife centres, aquariums or animal farms not for food production)
  - Real estate auctions (other than remotely) and inspections (other than by appointment)
- Introduced a density quotient for retail facilities of 1 per 4m<sup>2</sup> and increased cleaning requirements
- Introduced a restriction social sport gatherings
- Limited attendees at weddings (5 people) and funerals (10 people)

Prohibits operation of non-essential businesses and undertakings to slow spread. Cafes and food courts must stop providing table service, but may continue to offer delivery and takeaway. Cafes and canteens may continue to operate at: hospitals, care homes and schools, prisons, military bases, workplaces (though only as a takeaway service). Auction houses, real estate auctions and open house inspections, non-food markets, beauty and personal care services.

<https://www.premier.vic.gov.au/wp-content/uploads/2020/03/200325-Statement-From-The-Premier-1.pdf>

### Stage 3 restrictions

These restrictions are due to come into effect at midnight on 30 March 2020, and are:

- Gatherings will be restricted to no more than 2 people except for members of your immediate household and for work or education purposes;
- Requirement to stay home will become enforceable;
- Playgrounds, skate parks and outdoor gyms will also close;
- There are only four reasons to be out:
  - Shopping for what you need – food and essential supplies;
  - Medical, care or compassionate needs;
  - Exercise in compliance with the public gathering requirements;
  - Work and study if you can't work or learn remotely;
- Moratorium on evictions introduced;
- Rules for weddings (no more than five people to attend) and funerals (no more than ten people can attend).

### Essential services and non-essential services

A listing of the Victorian classification of essential compared to non-essential will be finalised in due course. REDACTED

REDACTED

### Summary of strong recommendations in Victoria on physical distancing (should) – top lines

In addition to Directions, the Chief Health Officer provides a number of strong recommendations around physical distancing that are considered critical for suppressing any transmission of COVID-19 in Victoria at the current time.

The top lines at the present time are:

- Play your part and do the right thing or Victorians will die.
- Wash your hands.
- Cough into your elbow.
- Keep your distance from other people. Keep 1.5 metres between yourself and others
- Stay at home.
- If you can stay home, you must stay home.
- Stay in your own house and do not go to someone else's house.
- If you don't need to go out, don't go out.
- Do not go out if you are sick except to seek medical care.
- Shop for what you need, when you need it – do not go shopping unless you have to.
- If you can work from home, you should work from home.
- If you go to work, you must follow all the social distancing rules.
- Keep a distance of 1.5 metres is between yourself and others.
- Stop shaking hands, hugging or kissing as a greeting.
- Work from home where possible.
- If you have had close contact with a confirmed case of coronavirus (COVID-19) in the previous 14 days you must self-isolate and must not participate in community gatherings including community sport.
- Stay home if you are sick and don't expose others. If you are unwell with flu-like symptoms, do not go outside your property or home, do not go to work, school or shops unless it is essential – for example to seek medical care.
- Do not travel interstate, overseas or take a cruise. Avoid unnecessary travel.
- Everyone should avoid crowds if possible. If you must be in a crowd, keep the time short.

## Policy development and decision-making

### Evidence for physical distancing policies

Physical distancing between people aims to minimise interactions between people to limit the opportunities for disease to spread from an infected person to an un-infected person. Measures to bring about physical distancing amongst populations have been utilised in previous efforts to control influenza epidemics and pandemics.

Observational and modelling studies have provided evidence to help guide the use of physical distancing measures for influenza. Although these can provide some insight into how we might expect physical distancing to influence the progression of the COVID-19 pandemic, COVID-19 has its own disease characteristics which will influence the impact of physical distancing measures.

Evidence of the impact of social distancing is beginning to emerge from countries in which the epidemic commenced earlier than in Australia, particularly China. Additionally, modelling studies using information on the epidemiological features of COVID-19 are estimating the impact of different physical distancing measures.

To ensure that Victoria's approach to physical distancing is informed by the best-available evidence, an evidence summary will be produced and updated as new results emerge from the global scientific community. The current summary of evidence for physical distancing is at [Appendix 5](#). This will be updated regularly **REDACTED**

### International and national comparisons

Reports outlining the physical distancing interventions in place in other Australian states and internationally will be developed and updated on an ongoing basis. These will be updated weekly in the first instance, however the current summary of comparisons for physical distancing is at [Appendix 6](#). **REDACTED**

### Evaluation of physical distancing policies

A range of measures to evaluate the efficacy of all interventions will be developed. In the first instance, these measures will include those suggested by the AHPPC:

- Evidence for efficacy of strengthened border measures/ travel advisories: reduction in the number of imported cases detected over time;
- Evidence of efficacy of the reduction in non-essential gatherings and mixing group sizes: reduction in the average number of secondary infections per case, based on contact tracing;
- Evidence for the combined efficacy of case finding and contact quarantine measures augmented by social distancing: reduction in the rate of growth of locally acquired infected cases;
- Evidence for the effectiveness of isolation: time from symptom onset to isolation.

The Intelligence function will develop a framework for monitoring and advising on progress with the effectiveness of physical distancing interventions in Victoria, to inform understanding of the Chief Health Officer and other colleagues, including decision-makers. **REDACTED**

Development is underway of a detailed evaluation proposal / approach to evidence collation the current summary of comparisons for physical distancing is at [Appendix 7](#). **REDACTED**

## Compliance and enforcement for physical distancing

### Purpose of this section

The purpose of this compliance protocol is to set out the compliance approach in relation to Deputy Chief Health Officer (D/CHO) directions under *Public Health and Wellbeing Act 2008* (PHWA).

### Scope of compliance and enforcement

The scope of enforcement and compliance activity will include persons and situations listed below:

- People under quarantine for any reason, including travel or close contact;
- People under isolation for any reason, including suspected cases and confirmed cases;
- Mass gatherings and any matter relating to any Direction relating to physical distancing, including visitation restrictions.

### Chain of command for enforcement and compliance

It has been agreed with the Chief Health Officer that the chain of command for matters relating to physical distancing (especially and including enforcement and compliance actions) interventions is:

- Chief Health Officer to
- Public Health Commander to
- Deputy Public Health Commander (Planning) to
- Director Health and Human Services Regulation and Reform to
- Manager Environmental Health Regulation and Compliance to
- Victoria Police.

### Strategy for compliance and enforcement

#### Intended outcome of compliance and enforcement activity

The outcomes being sought are to reduce the transmission COVID-19 through quarantine (self-isolation) for 14 days of those returning from overseas, isolation of those suspected to have or confirmed to have COVID-19, application of restrictions on non-essential mass gatherings, restricted entry into aged care facilities where vulnerable populations reside and closure of non-essential business. Actions should focus on achieving outcomes, be risk-based and minimise transmission risks in the Victoria community.

#### Strategy for focus of compliance and enforcement activity

The focus of activity will be on:

- Implementation of a mandatory detention program for new arrivals from overseas;
- Spot checks by Victoria Police of people who should be in quarantine or isolation;
- Mass gathering compliance and enforcement.

These priorities will change, and likely expand into specific and more targeted risk-based compliance for highest-risk individuals in quarantine or isolation.

The department will consider enhanced monitoring arrangements, and consider indicating to Victoria Police that other methods are considered, such as tracking of individuals through mobile phones, or random sampling calls to mobile phones of individuals if agreed. These methods are not yet formally under consideration.

**Explore further technological methods for tracking – Fiona Sparks**

#### Approach to compliance and enforcement – prioritisation framework for compliance activities

This will be based on a risk framework, based on public health risk.

An initial frame for Victoria Police was provided on 25 March 2020 and was:

- Cases diagnosed after midnight tonight.
- Passengers who have disclosed country visited in one of the higher risk countries? Which ones?
- Random selection of age cohorts from passenger list (of those who arrived less than 14 days ago) so that we can start to gauge which cohorts are the most likely to not comply.
- Pubs/clubs etc. (should be fairly easy to gauge with overnight crews.)
- Any allegations received from DHHS or VicPol Police Assistance Line.
- Selection of commercial premises mentioned in latest direction.

The proposed new preliminary order for focus of compliance and enforcement based on a public health risk assessment is (highest priority is first) from 26 March 2020:

- Mass gatherings that are underway where there alleged non-compliance with Directions;
- Cruise ships where there is potential or alleged non-compliance with Directions;
- Non-essential businesses where there is potential or alleged non-compliance with Directions;
- Confirmed cases who indicate they do not intend to isolate or are suspected not to be isolating;
- Known close contacts who indicate they do not intend to isolate or are suspected not to be isolating;
- Returned travellers from overseas who have indicated they do not intend to adhere to quarantine (self-isolation);
- Individuals where there is a report that a person is not adherent to quarantine or isolation;
- All other confirmed cases in relation to isolation Direction;
- All other close contacts;
- All other returned travellers within 14 days of return;
- Prohibited gatherings (other than mass gatherings) that are underway or alleged non-compliance with Directions;
- Non-essential activities that are alleged to be non-compliant with Directions.

**Document how this is being communicated to VicPol**

### **Linking members of the public to compliance action by Victoria Police**

Linking occurs by:

- Callers may select the social distancing advice line between 8am and 8pm at DHHS by calling 1800 675 398, and selecting option 2.
- Callers may speak to Victoria Police by calling 1800 675 398, and selecting option 4.
- Callers who come through to any other line should be referred to the 1800 675 398 line and advised to select option 4.
- Members of the public are encouraged to call the phone line, rather than emailing their concerns.
- If concerns are emailed from the public **about compliance with directions excluding those that are about close contacts and confirmed cases**, the email should be forwarded to the Victoria Police complaints inbox, which is [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

### **Department of Health and Human Services Liaison to Victoria Police**

The department has established a roster of Emergency Management Liaison Officers at the State Control Centre, associated with the Police Operations Centre. **Details of the EMLO here**

### **Department of Health and Human Services initiation of compliance activity**

If concerns are emailed from the public about **compliance by close contacts and confirmed cases**, the Operations Officer should oversee an investigation by the case and contact management team. If the case and contact management team assess that compliance action is required, they should contact the DHHS EMLO on the roster to agree how Victoria Police can assist, and may need to email details to the COVID-19 Victoria Police DHHS email address, which is [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

## Peer influence, education and community awareness to guide approach

It is anticipated that there will be high levels of voluntary compliance by those impacted by the Directions. This is due to high levels of community awareness, strong community support for measures to prevent transmission of COVID-19.

## Exercising a direction and considerations of enforcement

DHHS authorised officers are empowered to direct a person to comply with a D/CHO Direction (exercising the emergency powers). Victoria Police can assist an authorised officer to exercise a direction. Consideration of enforcement action, such as a prosecution under the PHWA, should generally only be pursued where there is a deliberate intention to not comply and/or repeated failure to comply with a direction.

## Victoria Police COVID 19 Taskforce

A Victoria Police taskforce of 500 officers will promote and assess compliance with directions and perform spot-checks, such as visiting those who have recently returned from overseas. The taskforce is coordinated through the Police Operations Centre. Information for spot checks can be provided directly to through Victoria Police SPOC.

## Victoria Police support

Victoria Police (VicPol) will support DHHS to respond to allegations of non-compliance with the directions. This includes:

- receiving reports of non-compliance with directions through the Victoria Police Assistance Line (1800 675 398 – option 4);
- seeking to influence compliance and behaviour through spot checks, reiterating obligations, providing education and outlining penalties for non-compliance;
- informing DHHS about alleged non-compliance and requesting DHHS support and response;
- where required, assisting DHHS authorised officers to provide a direction to a member/s of the public.

## Contacting the Victoria Police Special Operations Centre

Victoria Police Special Operations Centre private number is **REDACTED** if a senior officer in DHHS needs to contact the SPOC directly.

The DHHS EMLO to Victoria Police is on **TBC**, also [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

## Data management to support compliance and enforcement

### Department obtaining data on travellers for compliance

Update for system to upload information from Isolation Declaration Cards to a spreadsheet and provision to Intelligence Officer. **CHARLES**

Authorised officers are responsible for uploading information to the business system which will then inform an upload to PHESS.

### Provision of data on agreed priority groups to Victoria Police for enforcement and compliance purposes

On the direction of the Chief Health Officer, the Intelligence Officer has established a secure data portal for DHHS-Victoria Police data secure data sharing and provided a limited number of named Victoria Police officers in the COVID-19 response access. An information sharing agreement is under development.

Once each day, the Intelligence Officer or delegate will upload the following to the data portal:

- Instructions on the use of the data;
- All active close contacts;
- All non-recovered confirmed cases;
- All new arrivals via scanned and uploaded Isolation Declaration Cards.

In coming days, data will be widened to include other groups if authorised by the Chief Health Officer.

Update for providing information by the secure portal, along categories of compliance priority, derived from Isolation Declaration Cards and from PHESS. CHARLES / FINN

### Specific procedures to support compliance and enforcement

Update for how Victoria police stay safe – source of PPE

Update for how AOs stay safe – source of PPE

Update for how approach to compliance of allegedly non-compliant suspected or confirmed cases

Update for how approach to homeless cases, if they occur

Update for how approach to non-compliant person once directed to be compliant

### Digital platforms to aid contact tracing and enforcement and compliance

The department will be implementing a new contact system to send daily health monitoring SMS messages to close contacts of confirmed COVID-19 cases and recently returned travellers who must isolate for fourteen days.

This system will use an Australian based system called Whispir to send messages to contacts in the department's public health monitoring systems.

People who receive these messages will be required to check in daily to:

- Confirm that they are in quarantine
- Whether they are well or experiencing COVID-19 symptoms
- Whether they have been tested and waiting for results.

Close contacts and returned travellers who are not isolating will be flagged by the system and can be further followed up as required.

This system became active from 26 March 2020.

Update from Ben Kong on how widely this has been deployed. REDACTE

Further work is underway to explore other systems for automating case and contact tracing. [Fiona Sparks]

### Management of exemption requests and exemptions

Exemption requests are now being discouraged.

Exemptions should only be considered when there is a provision within the Direction to allow an exemption to be considered.

The Authorised Officer should provide advice to the requestor consistent with the *COVID -19 DHHS Physical Distancing Plan*.

Further information and consultation for an exemption of physical distancing can be contacted on 1800 675 398.

The process for management of exemption of Physical Distancing/ essential services requests is as follows:

- Explanations to parties should emphasise the Directions and rules and how to stay safe.
- Requestor can be advised to make submission for exemption of Physical Distancing/ essential services through [COVIDdirections@dhhs.vic.gov.au](mailto:COVIDdirections@dhhs.vic.gov.au)
- All submissions for exemption should be in writing, to that email address. [Note This email is currently monitored 8am-8pm daily by executive managers and authorised officers situated on level 17. These managers and authorised officers (serving as team leaders/expert advisors) are overseeing the staff manning the phone lines for option 2 of the 1800 number.]
- In considering an exemption, an Authorised Officer will then consider the application and may contact the Requestor to ascertain further information. In reviewing the request, the Authorised Officer will consider the extent to which there is a risk of transmission associated with the proposed exemption, across factors including:

- Compliance – compliance with measures is an important factor for higher risk groups
- Proximity of people - possibly the next most important factor
- Frequency of interactions - possibly the next most important factor
- Likelihood of surface touching - reason for hand hygiene focus
- Air environment (affecting likelihood of ‘jumping’ across) - reason outdoors is less risky – droplets less likely to travel
- The Authorised Officer will submit a template by email to the Deputy Public Health Commander (Planning) for pre-assessment – **REDACTED** s writing this now **REDACTED** – available today
- The Deputy Public Health Commander (Planning) will review and make a recommendation to the Public Health Commander.
- Decision documented in writing and saved at HHSF/20/8134 PUBLIC HEALTH - HEALTH PROTECTION - COVID-19 Requests for Exemption from Directions under State of Emergency
- The Authorised Officer must then notify the requestor in writing the outcome of the decision of the Public Health Commander.
- Police will then be advised where exemptions are granted by the Public Health Commander via the [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au).
- Formal documentation placed into the TRIM folder by the Deputy Public Health Commander or a tasking officer.
- Audit of requests to check responses will be provided at a later date.
- Update for how DHHS will communicate exemptions and record these and publish these

## Management of requests relating to detention notices

The process.

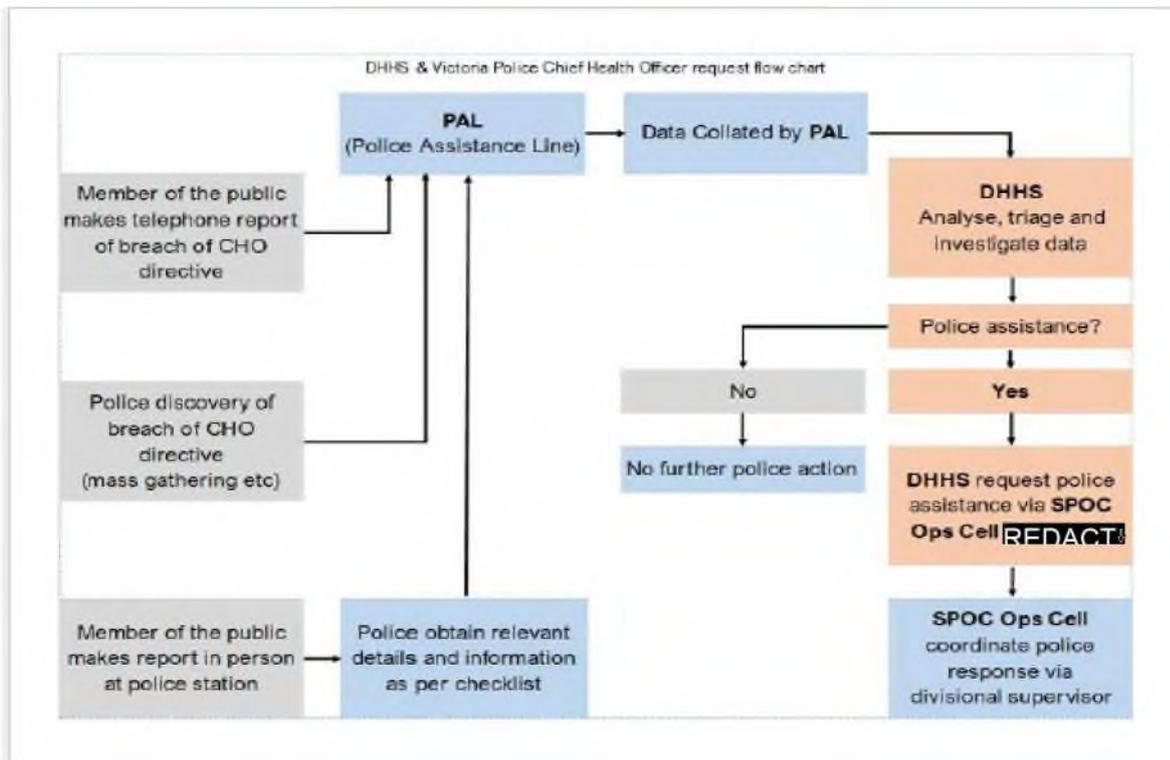

## Protocols for investigating and managing potential breaches of Directions

### General procedure

**A script for serving warnings for authorised officers will also be included [Meena Naidu]**

The following flow diagram outlines a general process flow for managing alleged breaches of a direction. It excludes education and spot checks performed by the Victoria Police COVID-19 taskforce.

Diagram 1 Flow diagram for managing alleged breaches

## Mass Gatherings No.2

### Recording of details and initial assessment

Reports of an alleged breach of the Mass Gatherings Direction (No.2) will be referred to the Victoria Police Advice Line 131 444.

Following a report of an alleged mass gathering, Victoria Police will seek the following details:

- contact details of the caller
- name, address, contact details of the person allegedly breaching the direction such as the organiser of the mass gathering and/or the person who owns, controls or operates the premises
- relationship to the caller
- location, time and description of the gathering, e.g. private residence or public place, name of venue or operator
- estimated number of people planned for, or at, the gathering
- place and intended time of the mass gathering
- whether the gathering is indoors or outdoors.

Consideration should also be given to:

- whether the circumstances meet the definition of a mass gathering<sup>1</sup> and exclusions including less than 100 people in a single undivided indoor space and there is not more than one person per 4 metres squared
- whether a mass gathering is planned, currently occurring or finished

### Action to achieve compliance and address non-compliance

#### *Planned mass gatherings*

Following a report of a planned mass gathering, Victoria Police will refer the matter to DHHS via [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au). Or to the DHHS EMLO at the SPOC. The DHHS EMLO at the SPOC needs to work

<sup>1</sup> Please refer to Mass Gatherings direction for the definition and exemptions.

with the compliance and enforcement team to enact further action. **[INSERT NUMBER TO REACH COMPLIANCE TEAM/AOs] [Meena Naidu – determine if 24 hours as well]**

DHHS will then:

- **urgently** email or phone the organiser and/or person who owns, controls or operates the premises to deter the mass gathering from occurring. DHHS will reiterate obligations, outline penalties for non-compliance and advise assistance may be sought from Victoria Police if the mass gathering proceeds.
- seek confirmation that the mass gathering will be cancelled
- consider the risk of the mass gathering including location, density of people present or likely to be present, flow or movement of persons or any social distancing factors
- consider issuing a verbal or written direction (through an authorised officer) to the organiser and/or person who owns, controls or operates the premises to cancel the mass gathering if:
  - a high risk is identified
  - there is no reasonable indication the mass gathering will be cancelled
- seek assistance of Victoria Police through Victoria Police SPOC operation cell **REDACTED** if DHHS determines a site visit and issuing a direction on site is needed.

#### *Currently occurring or recurring mass gatherings*

Following a report of a currently occurring mass gathering, Victoria Police will determine if attendance is feasible. If Victoria Police attends, Victoria Police will:

- contact DHHS via the DHHS EMLO at the SPOC
- seek to identify a person who:
  - owns, controls or operates the premises; and/or
  - is organising the mass gathering
- seek to influence compliance by reiterating obligations, providing education such as a fact sheet and outlining penalties for non-compliance.

Noting DHHS has limited capacity to attend a mass gathering while it is occurring (particularly after hours), DHHS will:

- consider the risk of the mass gathering including location, density of people present or likely to be present, flow or movement of persons or any social distancing factors
- consider providing information about obligations through a phone call, email or standard letter if breach is inadvertent or low risk in nature and future compliance is likely
- consider issuing a verbal or written direction (through an authorised officer) to stop the mass gathering. For a written direction, this may be undertaken after the mass gathering has finished
- seek confirmation that the mass gathering will be stopped or does not breach the direction in future
- consider a site visit and seek assistance from Victoria Police through SPOC operation cell **REDACTED** to stop the mass gathering if:
  - a high risk is identified
  - there is no reasonable indication the mass gathering will be stopped.

#### *Finished mass gatherings*

Following a report of a finished mass gathering, Victoria Police will refer the matter to DHHS via for action. DHHS will:

- contact the organiser and/or person who owns, controls or operates the premises to:
  - obtain reasons why the mass gathering occurred
  - reiterate obligations, provide further education and penalties

- seek confirmation there will be no breach of the direction in the future
- consider the risk of the mass gathering including location, density of people, flow or movement of persons or any social distancing factors
- consider issuing a verbal or written direction (through an authorised officer) to prevent a further mass gathering if the mass gathering is high risk in nature and there is a likelihood the mass gathering will recur.

## **Aged Care Facilities**

### Recording of details and initial assessment

Reports of an alleged breach of the Aged Care Facilities Direction will be referred to the Victoria Police Advice Line 131 444. Victoria Police will seek to obtain:

- contact details of the caller
- name, address and contact details of the person allegedly breaching the direction
- description of the breach
- relationship to the caller.

### Actions to achieve compliance and address non-compliance

Following a report of a breach of the Aged Care Facilities Direction, Victoria Police will refer the matter to DHHS via [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) for action. DHHS will:

- contact the operator of the aged care facility to reiterate obligations, provide further education and outline penalties
- contact the person breaching the direction to reiterate obligations, provide further education and outline penalties
- seek confirmation there will be no breach of the direction in the future
- consider issuing a verbal or written direction (through an authorised officer) if:
  - a high risk is identified
  - there is an indication the breach will recur

## **Non-essential business closure**

### Recording of details and initial assessment

Reports of an alleged breach of the non-essential business closure will be referred to the Victoria Police Advice Line 131 444. Following a report. Victoria Police will seek the following details:

- contact details of the caller
- name and address of the non-essential business
- details of the alleged breach, such as the type of business and when it is operating

### Actions to achieve compliance and address non-compliance

Following a report of an alleged operation of a non-essential business, DHHS will:

- contact the person who owns, controls or operates the business to provide a verbal or written direction (through an authorised officer) if;
  - a high risk is identified
  - there is no reasonable indication the person will comply; or
- provide information about obligations through a phone call, email or standard letter if the breach is inadvertent or low risk in nature and future compliance is likely
- seek a response to the allegation including confirmation there will be ongoing compliance with the direction.

## **Repeated breaches and deliberate intentions to not comply**

Following allegations of repeated breaches and/or a deliberate intention to not comply with any of the directions, DHHS will:

- obtain further information about the reason for alleged breach
- phone the person to further reiterate obligations, reason for self-isolation penalties and subsequently issue a verbal or written direction (through an authorised officer)
- consider a site visit to issue the direction with the assistance of Victoria Police by contacting the SPOC operation cell **REDACTE**

### **Opportunistic identification of non-compliance**

There may be times when Victoria Police identifies a breach of the direction through the normal course of business. For example:

- a person in a public place voluntarily identifies as having returned from overseas within 14 days;
- a mass gathering;
- operation of a non-essential business.

In this instance, Victoria Police should seek to influence compliance by reiterating obligations, providing education and outlining penalties for non-compliance. Victoria Police should ensure the details are recorded through the Police Advice Line and referred to DHHS [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) if follow up is needed.

Additional materials to be worked on and added:

### **Reporting and evaluation of compliance and enforcement**

The department proposes a range of checks or surveys of individuals who are directed to be in quarantine or isolation, including checks or surveys, and key metrics for evaluation. **[Meena Naidu]**

**A reporting framework / key data for reporting on a daily and weekly basis will be developed.**

## Plan for people returning from overseas to Victoria

### Background to mandatory detention intervention

A mandatory detention approach was introduced by a Direction that came into effect at midnight on Saturday 28 March 2020 and is available at <https://www.dhhs.vic.gov.au/state-emergency>

The objectives of the plan for people returning from overseas to Victoria are:

- To identify any instance of illness in returned travellers in order to detect any instance of infection;
- To ensure effective isolation of cases;
- To provide for the healthcare needs of returned travellers who are well or shown to be COVID-19 negative but are required to remain in quarantine for the required 14 days;
- To implement the direction of the Deputy Chief Health Officer through meeting:
  - A requirement to detain anyone arriving from overseas for a period of 14 days at a hotel in specific room for a specified period;
  - A requirement to record provision of a detention notice showing that the order was served and to manage access to information on who is in detention using a secure database;
  - A requirement to undertake checks every 24 hours by an authorised officer during the period of detention;
  - A requirement to fairly and reasonably assess any request for permission to leave the hotel room / detention.

### Governance and oversight of the mandatory detention intervention

#### Directions and exemptions

The Chief Health Officer and Deputy Chief Health Officer have instituted this Direction.

The following lead roles are involved in the oversight of the mandatory detention intervention:

- Deputy Chief Health Officer – issuing of Directions including the detention direction;
- Deputy Public Health Commander Planning – initial advice to DCHO/PHC on exemption requests where allowed or relevant;
- Director Regulation and Compliance – lead for compliance and enforcement activity including authorised officer workforce – including the issuing and modification of detention directions (for example including moving a person from one room to another);
- Director Health Protection and Emergency Management – lead for welfare and healthcare sector for detention sector;
- Director Primary Care - lead for medical services to people in detention.

#### Information management for people in mandatory detention

A business system is being developed to manage the welfare and health issues for people included in this intervention.

That system articulates with the PHESS database through a common link key.

Critical information about people in mandatory detention will be uploaded to PHESS at two points in the day as a download from the business system to be used.

**To be determined: the master source of who has exited the airport in mandatory detention.**

**To be completed: the build of the business system to support welfare and health needs of people in mandatory detention.**

The Enforcement and Compliance section will ensure identities of all persons in detention are entered onto PHESS through the twice daily upload process from the completed business system.

As a parallel system, Isolation Declaration Card (IDCs) are collected at the airport and batched and sent to an Australia Post call centre. The data is entered into a spreadsheet and sent to DHHS for cross entry into PHESS. This process takes approximately 24 hours. This can then be reconciled with any passenger list or people in detention list.

Authorised officer and Chief Health Officer obligations

### **Authorised officer\* and Chief Health Officer obligations**

Sections 200(1)(a) and 200(2) – (8) of the PHWA set out several emergency powers including detaining any person or group of persons in the emergency area for the period reasonably necessary to eliminate or reduce a serious risk to health.

Exercising this power imposes several obligations on DHHS authorised officers including:

- before the person is subject to detention, explaining the reason why it is necessary to detain the person
- if it is not practicable to explain the reason why it is necessary to detain the person, doing so as soon as practicable
- before exercising any emergency powers, warning the person that refusal or failure to comply without reasonable excuse, is an offence
- facilitating any reasonable request for communication made by a person subject to detention
- reviewing, every 24 hours, whether continued detention of the person is reasonably necessary to eliminate or reduce a serious risk to health
- giving written notice to the Chief Health Officer (CHO) that a person:
  - has been made subject to detention
  - following a review, is to continue to be subject to detention.

The notice to the CHO must include:

- the name of the person being detained
- statement as to the reason why the person is being, or continues to be, subject to detention.

Following receipt of a notice, the CHO must inform the Minister as soon as reasonably practicable.

*\* DHHS Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order.*

## **Process by stage**

### **Airport and transit process**

Passengers pass through immigration, customs and enhanced health checks before being transferred to their hotel.

- Every passenger is temperature checked by a registered nurse (RN) contracted by DHHS.
- Every passenger is handed a copy of the direction and a detention notice by the DHHS Authorised Officer (AO).
- Every passenger is provided an information sheet by DHHS.
- Passengers are met by VicPol/Border Force and escorted to organised buses for transport to the hotel.
- Every passenger is given a single-use facemask to wear while in transit to their hotel room.
- Every passenger is given a **welfare survey** to fill out on the bus.

### **Authorised officer actions at the airport**

DHHS Authorised Officers:

- introduce themselves and show their Authorised Officer identification\* (**mandatory AO obligation**)
- must provide a copy of the direction and detention notice to each passenger (or parent/guardian of a minor) and:
  - explain the reasons or detention (**mandatory AO obligation**)

- warn the person that refusal or failure to comply with a reasonable excuse is an offence (mandatory AO obligation)
- ensure the notice of direction and detention:
  - is signed by the detainee and dated
  - has a hotel name and room number
  - has a reference number.
- record issue and receipt of the notice through a scanned photograph and enter in database
- facilitate a translator to explain the notice and reasons for detention
- facilitate any reasonable request for communication, such as a phone call
- provide a fact sheet about detention (what the detainee can and can't do, who to contact for further information)
- cross reference detainees with passenger manifest
- ensure detainee boards the bus (see policy for unaccompanied children)
- record actions taken in writing, including the above mandatory obligations, use of translator and any other arising issues.

If it is not practicable to explain the reason for detention, the AO must do so as soon as practicable. This could be at the hotel, however every effort should be made to provide the direction at the airport. (mandatory AO obligation).

### **People who are unwell at the airport**

Any person who is unwell at the airport will be assessed by a DHHS staff member and biosecurity officer at the airport. After discussion with the human biosecurity officer, if it is determined that the person meets the criteria as a suspected case, the following actions should take place:

- The human biosecurity officer should organise an ambulance transfer to the Royal Melbourne Hospital or Royal Children's Hospital for testing and assessment;
- The authorised officer from DHHS at the airport should log the person as requiring mandatory quarantine and then should follow-up with the hospital to update on whether the person has been found to be negative, so a transfer can be organised to return to the hotel;
- If the person is unwell and requires admission, they should be admitted and the lead for enforcement and compliance informed;
- If the person is well enough to be discharged they should return to the hotel through an arrangement by the authorised officer, and be placed in a COVID-19 floor of the hospital if positive, or in a general part of the hotel if tested negative for COVID-19.

### **Arrival at hotel – check in**

- Detainee provides notice of direction and detention to hotel staff to allocate room.
- Detainee provides notice of direction and detention back to AO to confirm the arrival date, time and room on notice.
- AO takes photo of notice of direction and detention and enters into database.
- After nurses conducts medical and welfare check, AO to liaise with nurses to identify detainees with medical or special needs.
- AO to note detainees with medical or special needs, such as prescription and medical appointments.

Passengers will be sent to their allocated room. They will be informed a person will contact them in the afternoon or next day to undertake a more formal assessment of longer-term needs and, that a welfare check will occur daily.

### **Welfare and health service provision**

- Residents will have a welfare check (as specified below) each day.
- DHHS officers conducting welfare checks email [covid-19.vicpol@dhhs.vic.gov.au](mailto:covid-19.vicpol@dhhs.vic.gov.au) and AO individually to alert AO of medical and welfare issue.

- Completed **welfare surveys** are handed to AOs at the hotel.
- A welfare survey will be conducted by an Authorised Officer of DHHS. See **Appendix**, which includes a script for conducting the welfare check. **[ADD]**
- Residents will be provided with a resident satisfaction survey to complete each week.
- Residents can seek review by the nurse 24 hours a day if required.
- 24 hour on-call medical support will be available for on call subject to demand. This will initially be provided by a Field Emergency Medical Officer, and subsequently through a locum general practice service.
- **Medical service to be organised by Primary Care Sector. Deliverables include:**
  - **Primary care assessments;**
  - **Prescription provision;**
  - **24 hour access to a general practitioner;**
  - **24 hour access to nursing assessment.**
- It is advisable that where possible, individuals who are in detention are linked to receive telehealth care from their normal general practice provider.

### Requirement for review each day

**This is mandatory AO obligation.** Each 24-hour period, DHHS AO:

- will undertake a electronic review of detainment arrangements by viewing a **CENTRALISED MASTER SPREADSHEET**. This includes reviewing:
  - all detainees at the hotel
  - days in detention so that 14-day self-isolation period is adhered to
  - any other issues that have arisen
  - determining whether continued detention of the person is reasonably necessary to eliminate or reduce a serious risk to health.

To inform decision-making, a DHHS AO must:

- consider that the person is a returned overseas traveller who is subject to a notice and that they are obliged to comply with detainment
- consider that detainment is based on expert medical advice that overseas travellers are of an increased risk of Covid-19 and form most Covid-19 cases in Victoria
- note the date of entry in Australia and when the notice was given
- consider any other relevant compliance and welfare issues the AO<sup>2</sup> becomes aware of, such as:
  - person's health and wellbeing
  - covid-18 symptoms on arrival
  - medical record of being previously infected with Covid-19
  - any breaches of self-isolation requirement
  - issues raised during welfare checks (risk of self-harm, mental health issues)
  - actions taken to address issues
  - being cleared of Covid-19 results while in detention, which may be rationale for discontinuing detention
  - any other material risks to the person
- record the outcomes of their review (high level notes) for each detained person (for each 24-hour period) in a **CENTRALISED MASTER SPREADSHEET**. This spreadsheet allows ongoing assessment of each detainee and consideration of their entire detention history.

**To ascertain any medical, health or welfare issues, AO will need to liaise with on-site nurses** and welfare staff (are there other people on-site an AO can liaise with to obtain this information).

### **Charter of Human Rights considerations in decision-making making process**

AO should consider the Charter of Humans Rights when exercising emergency powers and reviewing a person's detention every 24 hours, namely:

- **Right to life** – This includes a duty to take appropriate steps to protect the right to life and steps to ensure that the person in detention is in a safe environment and has access to services that protect their right to life
- **Right to protection from torture and cruel, inhuman or degrading treatment** – This includes protecting detainees from humiliation and not subjecting detainees to medical treatments without their consent
- **Right to freedom of movement** – While detention limits this right, it is done to minimise the serious risk to public health as a result of people travelling to Victoria from overseas
- **Right to privacy and reputation** – This includes protecting the personal information of detainees and storing it securely
- **Right to protection of families and children** – This includes taking steps to protect facility and children and providing supports services to parents, children and those with a disability
- **Property rights** – This includes ensuring a detainee's property is protected
- **Right to liberty and security of person** – this includes only be detained in accordance with the PHWA and ensuring steps are taken to ensure physical safety of people, such as threats from violence
- **Rights to humane treatment when deprived of liberty** - This includes treating detainees with humanity

### **Written notice to Chief Health Officer and advice to Minister**

**This is a mandatory obligation.** DHHS authorised officers must give written notice (after a review) to the Chief Health Officer as to whether continued detainment for the next 24 hours is reasonably necessary to eliminate or reduce the risks to health. The written notice must set out the reasons for continuing or discontinuing detention.

**The timing of the written notice to the CHO should occur within 48 hours of an AO undertaking the review. A process to conduct this written notification using an extract from PHESS will be established. The CHO must then advise the Minister of each notice received.**

### **Occupational health and safety for Authorised Officers**

**Please refer to Appendix 2**, which sets out procedures for authorised officers when attending off site locations during the State of Emergency. It is understood that Emergency Management Branch will provide masks to all DHHS employees.

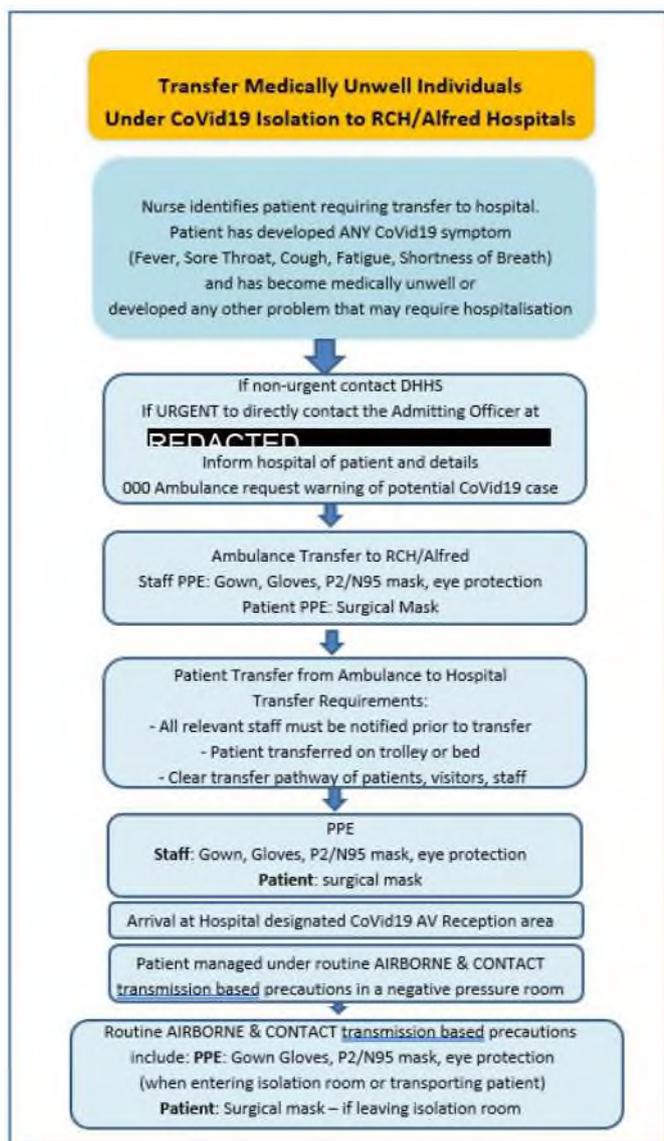

### **Actions to detect and test for COVID-19 amongst people in mandatory detention**

The following are the actions to enact this:

- Residents will be asked daily (via phone or text) if they have symptoms consistent with COVID-19. These include but are not limited to fever, cough, shortness of breath and fatigue.
- The nurse onsite will be notified. The nurse will call the patient and assess them over the phone. If face to face assessment is required, the nurse will assess them in the room with appropriate PPE.
- Security staff in PPE (masks and gloves) will accompany all nurses visiting hotel rooms. They will wait outside unless requested to enter by the nurses (full PPE is required to enter rooms).
- The nurse will assess for symptoms of coronavirus. If deemed necessary, they will take swabs to test for COVID-19.
- If the patient is well enough, they can remain in quarantine at the hotel to await the test results. If they are sharing a room with another resident, they should be moved to a separate room if feasible and according to availability of rooms. If separation is not possible, they should practise physical distancing as far as is possible.
- If the test is positive and the passenger is well, they can remain in quarantine at the hotel but should be moved to a separate section/floor of the hotel which is designated for confirmed cases. If they are sharing with other passengers, then arrangements such as a separate room or provision of PPE may be required, depending on the circumstances (for example it may not be feasible or appropriate to separate young children from parents).

## Hospital transfer plan

- Passengers requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
- If the hospital transfer is non-urgent, contact DHHS.
- If the hospital transfer is urgent, contact the Admitting Officer at RCH/RMH/the Alfred.
- Inform the hospital of patient and details.
- Call 000 to request ambulance and inform them that the passenger is a suspected (or confirmed) case of COVID-19.
- Staff should don full PPE and the passenger must wear a single-use surgical mask if tolerated.
- All relevant staff must be notified prior to the transfer.
- The passenger should be transferred on a trolley or bed from ambulance into the designated COVID-19 ambulance reception area.
- The patient should be managed under routine airborne and contact transmission-based precautions in a negative pressure room if available. The patient should wear a single-use surgical mask if leaving the isolation room.
- Ambulance services will list the hotels as an area of concern in case of independent calls and will ask on site staff to assess need for attendance in the case of low acuity calls.
- All residents who are: in high risk groups, unwell, breathless or hypoxic (O2 sats <95%) should be considered for hospital transfer.

### Actions for confirmed cases of COVID-19 in people in mandatory detention

The following actions should be taken:

- Residents with confirmed COVID-19 should be accommodated / cohorted in a separate section/floor of the hotel, away from the non-COVID passengers.

### Resident risks and wellbeing

#### Potential threats to health and wellbeing of people in mandatory detention

Potential risks associated with detention of returned travellers for compulsory 14-day quarantine can broadly be divided in physical or mental health risks.

| Physical risks                            | Mental health risks         |
|---|-----------------------------|
| Transmission/development of COVID-19      | Family violence             |
| Transmission of other infectious diseases | Depression                  |
| Other medical problems                    | Anxiety                     |
| Diet – poor/imbalanced diet, food         | Social isolation/loneliness |

|   |                             |
|---|-----------------------------|
| allergies/intolerances, over-consumption                                |                             |
| Lack of exercise  | Claustrophobia              |
| Lack of fresh air   | Drug and alcohol withdrawal |
| Smoking – nicotine withdrawal, risk of smoking within rooms/fire hazard |                             |

### Conduct of a welfare check

A welfare check will allow passengers to be assessed for medical and social issues, and concerns flagged and responded to. These issues include but are not limited to health, mental health, safety and family violence concerns. A welfare check will be conducted by Authorised Officers which is included as a script at **Appendix XX**.

### Safety / mental health

If there are concerns about the safety or mental health of passengers, the process is as follows:

- The nurse will review via phone (or in person if required with appropriate PPE).
- If escalation is required, the nurse will **contact the Anxiety Recovery Centre Victoria for psychosocial support**.
- Mental health triage at RMH/the Alfred can be contacted as a back-up.
- If the person is acutely unwell or at serious risk, urgent ambulance should be arranged by calling 000.
- Daily welfare check phone calls should be implemented thereafter if not already implemented.

### Family violence (FV)

If there are concerns about family violence / the safety of women and children, the process is as follows:

- Case worker is called to review via phone initially or in person if required (with appropriate PPE).
- A separate room may need to be organised to facilitate the review away from the other family members.
- If deemed necessary, separate rooms should be organised to separate the family members.
- Case worker to review again as required.

### Alcohol and other drugs

If there are concerns about alcohol or other substance abuse or withdrawal:

- Consider nurse/medical review.
- Provide numbers for support services (listed below).
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.

## Tiers of risk for persons in mandatory detention

### Principles

- Residents will be triaged into three tiers of risk. The type of welfare check will depend on the tier the passenger falls into.
- For phone calls (tier 1 and tier 2), translators must be available as needed. Language requirements should be recorded on arrival at the hotel and provisions made as required.
- Automated text messages are sent to all passengers in tier 3 via Whispir.
- Residents may be moved between risk tiers throughout their quarantine period as need dictates.

| Risk Tier | Risk factors   | Welfare check type               |
|-----------|--|----------------------------------|
| Tier 1    | Residents with suspected or confirmed COVID-19<br>Families with children < 18 years<br>Passengers aged > 65 years<br>Aboriginal and Torres Strait Islander peoples<br>Residents with underlying comorbidities (e.g. respiratory or cardiac conditions) | Daily phone call                 |
| Tier 2    | Those who indicate they require a phone call but do not have any other risk factors.<br>Residents who are by themselves.   | Phone call every second day      |
| Tier 3    | Low risk – everyone else.  | Daily text message (via Whispir) |

### Priority areas for resident wellbeing

#### Diet

- Ensure a well-balanced diet with options provided for those with specific dietary requirements.
- Ensure access to essentials within the room (e.g. snacks, tea and coffee) to limit the amount of interactions/contact required with staff.
- Ensure access to additional food if required.
- Food and drink deliveries (e.g. UberEats) are not permitted at this time for health and safety reasons.

#### Exercise and fresh air

- If the room has a balcony, ensure the residents can access it for fresh air.
- Advise residents to open windows/balconies where possible for fresh air and ventilation.
- If it is possible for residents to go outside to take some exercise for organised/supervised short periods of time, this should be facilitated where possible. Residents should ensure physical distancing is practised during this period. Only well residents from the same room should be able to go out to exercise at the same time.
- Residents should be provided with resources for exercise routines and yoga/mediation that they can perform safely within their rooms.

#### Social and communications

- All residents should have access to **free** wifi/internet where at all possible.
- All residents should have access to entertainment such as television and streaming services (e.g. Netflix).
- All residents should have access to communications so that they can keep in regular contact with family and friends throughout the quarantine period.
- Toys and equipment should be provided for small children if possible.

#### Smoking policy for people in detention

As part of the emergency response to COVID-19, individuals have been confined within hotels while under quarantine. The movement of these people has been restricted to hotel rooms, without access to outdoor spaces, where they can smoke.

#### Current laws

Under the *Tobacco Act 1987* (Tobacco Act), smoking is prohibited in an "enclosed workplace", however, Section 5A (2) (g), provides an exemption for the personal sleeping or living areas of a premises providing accommodation

to members of the public for a fee. This means that, while a hotel is considered an enclosed workplace, the hotel could allow the occupants of the rooms to smoke if they choose.

In many cases, hotels have implemented their own smoke-free policies in rooms as the smoke is likely to enter the centralised air conditioning systems resulting in occupants of other rooms and staff being exposed to the smoke. Smoke also remains on the surfaces of the room and enters soft furnishings meaning that it remains in the room and exposes staff cleaning the room to the remaining residual smoke. The Department of Health and Human Services supports and encourages hotels to make their rooms smoke-free.

If smokers were to be permitted to leave their rooms for supervised smoke breaks, they would need to be taken to an area that does not constitute an enclosed workplace. This might be a balcony, roof top or other outdoor area. This area should preferably be away from open windows, doors and air conditioning intake points.

### COVID-19 and smoking

The World Health Organization (WHO) has advised that any kind of tobacco smoking is harmful to the bodily systems, including the cardiovascular and respiratory systems, and puts smokers at greater risk in the context of COVID-19. Information from China, where COVID-19 originated, showed that people with cardiovascular and respiratory conditions, including those caused by smoking, were at higher risk of developing severe COVID-19 symptoms and death.

The Victorian Chief Health Officer has recommended that quitting smoking reduces the health risks associated with COVID-19.

### Other examples of restricting access to smoking

There are some precedents of people being confined to facilities where they are unable to smoke. This includes mental health facilities, prisons and, if people are unable to leave, hospitals. In these circumstances, individuals are supported to manage cravings using pharmacotherapies such as nicotine replacement therapies.

### Victoria's Charter of Human Rights and Responsibilities

Removing the ability to smoke would be compatible with the *Charter of Human Rights and Responsibilities Act 2006 (the Charter)*, as it would be for the purposes of protecting the right to life. Section 9 of the Charter states that "Every person has the right to life and to not have their life taken. The right to life includes a duty on government to take appropriate steps to protect the right to life."

### Options

#### *Option 1: Provide support for smokers to quit or manage cravings (Recommended)*

The preferred option, for both the benefit of the individual and broader community would be to support smokers to quit or manage withdrawal while confined to their hotel room. This would mean that smokers be supported to manage cravings while they are unable to smoke but would not be forced to quit.

This could be easily managed through the provision of approved nicotine replacement therapies (NRT), with meal deliveries, accompanied by counselling through the Quitline. Quit Victoria has recommended a box of patches and an intermittent form of NRT such as a spray. These items are available for purchase without a prescription from a range of retailers including pharmacies and some big supermarkets.

Other pharmacotherapies, like zyban or champix, would require a prescription from a GP and are designed to help people completely quit as opposed to a short-term measure for people who are forced to stop smoking abruptly. These medications can take a while to take effect and, with champix, the advice is to continue smoking until it starts to impact on your cravings which means that it would not be an appropriate option for the circumstances.

Addiction to cigarettes includes both nicotine dependence and a behavioural and emotional dependence, which is why counselling plus pharmacotherapy is required. Someone who is heavily addicted will crave a cigarette every 45-60 minutes.

Telephone counselling is available via the Quitline - 13 78 48

Even if someone doesn't want to quit, Quitline can help them reduce the number of cigarettes they smoke.

People can also contact their regular general practitioner via telehealth.

*Option 2: Relax no smoking restrictions for the hotel rooms*

While it would be legally possible to enable people in quarantine to smoke in their rooms, this option is not recommended. This would have an adverse impact on hotels and their staff and goodwill in the circumstances. It would also increase the health risks of individuals potentially already at risk of COVID-19. When sharing a room with children, smoking should not be allowed.

*Option 3: Accompany individuals to leave the room to smoke*

While it would be possible to create a smoking area for people wishing to smoke, such as in an outdoor drinking area attached to a bar or restaurant facility, this option is not recommended. Allowing people to leave their hotel rooms to smoke undermines the quarantine restrictions being put in place. The individuals would need to be accompanied by security guards and might need to travel floors via lifts to access an outdoor area or leave the building.

Even if we assume, that the hotel is not currently operating for other customers, movement in the hotel creates an increased risk for staff and a need for greater vigilance in cleaning and maintaining distance.

## **Other**

- All residents should be given the contact information for support services such as Lifeline at the beginning of their quarantine period (the information sheet they are provided with at the airport should also have these contact numbers).
- Residents should have access to fresh bedlinen and towels as required.
- Care packages may be permitted for delivery to residents under certain circumstances and subject to checks by AOs.
- Residents can be provided with up to three standard drinks per day if there is a risk of alcohol withdrawal (this is in preference to prescribing benzodiazepines for withdrawal).
- Other residents can also request alcoholic drinks as part of their food and drink provisions.
- Smoking breaks or NRT should be offered to all smokers if feasible.

## **Personal protective equipment (PPE)**

Staff who engage with monitoring or assisting persons in mandatory detention:

1. Apply standard infection prevention and control precautions at all times:
  - a. maintain 1.5 metre distance
  - b. wash your hands or use anti-bacterial agents frequently
  - c. avoid touching your face.
2. Every situation requires a risk assessment that considers the context and client and actions required.
3. If you are not able to maintain a 1.5 metre distance and the person has symptoms (for example coughing) or is known to be a COVID-19 case use:
  - a. fluid-resistant surgical mask (replace when moist or wet)
  - b. eye protection
  - c. disposable gloves.
4. If you need to be in a confined space (<1.5 metre) with a known COVID-19 case for more than 15 minutes, wear a P2/N95 mask, eye protection and gloves.

Further guidance on use of PPE

- PPE will be available at the donning area on each floor/area.
- Biohazard waste bags and hand sanitiser will be available at the doffing area on each floor.
- Gloves should be changed between residents in both the COVID and non-COVID zones.
- P2/N95 masks should be worn when dealing with residents in the COVID zone.
- P2/N95 masks require changing every 4 hours and if there is a breach or they are wet.
- Single-use face masks should be worn for other residents if involved with direct care of symptomatic patients, including the collection of viral swabs.
- Single use face masks can be changed every 2 hours, although prolonged direct patient contact is not desirable.

### **Temporary leave from the place of detention**

The Isolation (Diagnosis) Direction (made 25 March 2020) requires that persons in Victoria diagnosed with COVID-19 self-isolate in a premises (including use of a hotel room) until meeting departmental criteria for discharge and clearance from isolation permitted.

Persons diagnosed with COVID-19 and self-isolating are not permitted to leave the premises, except in the following three (3) circumstances:

1. *For the purposes of obtaining medical care or supplies –*
  - in particular circumstances, DHHS authorised officers and Victoria Police officers may need to determine if medical care is required and how urgent that care may be. DHHS officers may wish to discuss the detainee's medical needs with their manager or a departmental medical officer to assist in determining urgency
  - where possible, authorised officers or Victoria Police officers should attempt to provide the needed medical supplies. If not possible, detainees may be permitted to obtain medical supplies; the detainee should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and social distancing principles should be adhered to.
2. *In any other emergency situation –*
  - DHHS authorised officers and Victoria Police officers may need to determine the severity of any emergency (such as a building fire, flood, natural disaster etc) and the health risk they pose to detainees
  - if deemed that numerous detainees need to leave the premises due to an emergency, a common assembly point external to the premises should be utilised; detainees should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and social distancing principles should be adhered to
  - the accompanying DHHS authorised officer or a Victoria Police officer should ensure that all relevant detainees are present at the assembly point by way of a register of detainees.
3. *In limited outdoor circumstances when it is possible to avoid close contact with other persons and not to enter any other building:*
  - detainees may be permitted to leave their premises for outdoors temporarily; this may include the need for 'fresh air', a cigarette, a short walk etc
  - while temporarily outdoors, detainees are not permitted to enter any other building that is not their (self-isolating) premises
  - detainees should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and social distancing principles should be adhered to
  - a register of detainees should be utilised to determine which detainees are temporarily outside their premises at any one time.

### **Release from mandatory detention**

Checklist of considerations prior to release:

- Review the case file and ensure the 14 day detention has been met;
- Check the detainee meets the following – i.e. no symptoms of COVID-19 infection;

- Any physical checks of the room (damage, missing items, left items etc).

Supporting detainee to reach their preferred destination:

- DHHS organise for the detainee to be transported to their destination by completing a cab charge, Uber or whatever mode of transport.
- Release from isolation criteria are as per current DHHS Victoria guidelines (based on the SoNG).

### **Cleaning of rooms**

Housekeeping services will not be provided routinely to residents. Fresh linen, towels and additional amenities can be left outside of rooms for residents to then collect. Biohazard bags can be left for residents to place dirty linen in and to leave outside their rooms for collection. Terminal cleaning is required on vacation of each room.

## **Duties and Requirements**

### **DHHS duties**

Two activities must be completed by DHHS every day (Meena and Merrin):

- the legal obligation for being detained
  - The detention of each resident must be reviewed at least once every 24 hours for the period they are in detention, in order to determine whether the detention continues to be reasonably necessary to eliminate or reduce a serious risk to public health.
  - this can be via an AO looking over the database / spreadsheet to ensure they are meeting the legal obligations of detention.
  - this is not a call or face to face unless there is an issue that arises.
- Meeting our duty of care for detainment and completed regular (TBD) welfare check as per the **script designed by Di White (still to come)**.
- Legal requirement of transport to be organised at all times.

**Any queries/issues with AOs to go through Meena first.**

## **Policy on exemptions from mandatory detention**

### **Objective of policy on exemptions**

The term 'exemption' for this purpose refers to a judgment that a person does not require to be in mandatory detention.

Noting that there are broadly two mechanisms available to the Public Health Commander to release a person from mandatory detention:

- The daily review by the authorised officer (with agreement of the Public Health Commander) could find that detention is no longer required, or
- There could be permission given by the authorised officer (with agreement of the Public Health Commander) that a person has permission to leave the room in which they are detained.

The Public Health Commander could determine that detention should be served in an alternative location to a hotel, by writing a detention order to that effect.

### **Potential reasons for an exemption**

In the following circumstances there should be consideration of an exemption:

- An unaccompanied minor;
- A person who has recovered from confirmed COVID-19 infection and is released from isolation;
- A person who has a medical illness requiring hospital care;
- A person where there are compassionate grounds in the view of the Public Health Commander.

Note that NSW Health have exempted unaccompanied child' from detention provisions in that state.

### **Process for considering exemptions**

The Public Health Commander, through authorised officers, should properly consider a request for permission to leave a room where detention is being conducted, or an 'exemption'.

The process is:

- The authorised officer submits a proposal in writing to the Director of Enforcement and Compliance;
- The Director submits the proposal to the Deputy Public Health Commander Planning for assessment;
- The Deputy PHC Planning recommends a ruling by the Deputy Chief Health Officer;
- The outcome is communicated to all parties for action by the Director.

### **Policy on unaccompanied minors**

Current policy is:

- If the person is under 18 years of age parent or guardian is permitted to stay with them, but only if they agree to submit to the same conditions of detention for the period that the person is detained.

Recommended policy:

- Minors – persons under the age of 18 – without accompanying adult guardians may be present as airport arrivals and will be required to self-isolate in suitable premises for 14 days. It is expected that airport arrivals will be housed in Melbourne hotels.
- Child is released directly from the airport into the custody of their parent or guardian.
- The child remains in isolation in their usual place of residence for the quarantine period and complies with the quarantine direction.
- The quarantine direction could be the same as the isolation direction. It should include a review as per the detention order.
- This is consistent with NSW approach.

#### **Issues to resolve:**

- Contact details of the minor's parents or guardian required to inform them of minor's self-isolation requirements [Australian Border Force and VicPol should have this information?]
- Are working with children checks required for DHHS authorised officer potentially accompanying minors leaving premises?

## **Potential non-compliance and escalation**

### **Options to facilitate compliance**

The authorised officer may:

- Provide detainee opportunity to communicate including any request for a third-party communicator (such as translator);
- Issuing a warning if the detainee chooses not to comply with the requirements;
- Issuing a Penalty Infringement Notice ;
- Directing Victoria Police or accommodation security to physically detain the non-compliant individual for transfer to their secure site.

### **Potential non-compliance and escalation**

If a DHHS authorised officer becomes aware that a detainee has left their premises for any reason not permitted, Victoria Police should be notified of the detainee's details, potential reasons for the detainee leaving, where they may have gone and whether they have returned to their (self-isolating) premises.

DHHS authorised officers may consider enforcement activity, dependant on the nature of any breach.

### **Transfer of uncooperative detainee to secure accommodation**

Separate mode of transport for uncooperative detainees to secure site for 14-day isolation. Ensure appropriate safety measures are taken including child locks of doors and safety briefing for drivers etc. **What information is provided to the hotel accommodation provided?**

### **Unauthorised departure from secure accommodation**

The *Protocol for temporary leaving of secure accommodation* outlines approved reasons detainees can leave their secure accommodation. If there is reason to believe a detainee is not complying with the notice of direction isolation requirement :

- **Notify security or Police to check the detainee is in their room**
- **If the detainee has left their room, authorised officer/police/security to advise the detainee they are required to comply with the notice of direction isolation requirement.**
- **Does the authorised officer need to direct Police or security to assist with the facilitation of detainees back to their secure accommodation ?**

### **Other policies**

- **Refusal to co-operate at Airport policy**
- **Unauthorised leaving of hotel – non-compliance with direction policy**
- **Exercise or other approved reason for room leave policy**

## Communication and education

### Call centre for physical distancing queries

A call centre for public advice on physical distancing has been established. This will be staffed by authorised officers and managed by a Director Health Protection and Emergency Management.

The internal number is **(03) 9096 0609**, and it is open for calls from 8am to 8pm seven days a week. Members of the public should call 1800 675 398, and select Option 2.

Review of workforce and escalation protocols.

Review and listing of collateral to support staff in the call centre.

### Current communications with the Victorian public and health sector

The current collateral for the Victorian public and health sector to communicate on physical distancing requirements in Victoria includes:

#### Update for latest developments - Anna

- Tile on physical distancing, including web content by setting;
- Uploadable Victorian physical distancing document in keeping with that tile's web content, located at TRIM HHSD/20/142098 – **REDACTE** / Finn Romanes]
- Content under the State of Emergency tab – Directions;
- Content under 'About Coronavirus' tab;
- Interviews and press conferences by the Chief Health Officer;
- Social media posts on physical distancing;
- Video of the Chief Health Officer talking to all Victorians on physical distancing, being a close contact and being in quarantine or isolation [PIO]

## Appendix 1 - Standard emails and letter advice for compliance and enforcement

The following templates are generic and educative in nature. DHHS officers should adapt the tone and content according to risk and individual circumstances.

### Airport arrivals

Dear (insert name),

As you may be aware, Victoria's Minister for Health has declared a state of emergency throughout Victoria in response to the coronavirus or COVID-19 situation. Following this declaration, Victoria's Deputy Chief Health Officer has exercised emergency powers under the *Public Health and Wellbeing Act 2008* to make a direction to eliminate or reduce the serious risk to public health posed by COVID-19.

We are contacting you as Department of Health and Human Services has received information that you may be not complying with the Airport Arrivals direction issued by Victoria's Deputy Chief Health Officer.

Please be aware that: a person who arrives between 5 pm on 18 March 2020 and midnight on 13 April 2020 at an airport in Victoria on a flight that originated from a place outside Australia, or on a connecting flight from a flight that originated from a place outside Australia:

- must travel from the airport to a premises that is suitable for you to reside in for 14 days; and/or
- except in exceptional circumstances, must reside in a suitable premises for the period beginning on the day of your arrival and ending at midnight on the fourteenth (14th) day after arrival);
- must not leave the premises except:
  - for the purposes of obtaining medical care or medical supplies
  - in any other emergency situation circumstances where it is possible to avoid close contact with other persons; and
- must not permit any other person to enter the premises unless that other person usually lives at the premises, or the other person is also complying with this direction for the same 14 day period, or for medical or emergency purposes also complying with the CHO direction, or for medical or emergency purposes).

This email/letter seeks to inform you of your obligations. A copy of the direction and a fact sheet is attached to this email/letter.

#### Why it is important to comply with the Chief Health Officer's direction

The Victorian Government is very concerned about the serious, and potentially catastrophic, risk to public health arising from COVID-19 throughout Victoria.

Persons entering Victoria are at an increased risk of COVID-19. That is why a person entering Victoria from overseas must self-isolate for a period of 14 days in accordance with the Deputy Chief Health Officer's direction. Failure to self-isolate in accordance with the Deputy Chief Health Officer's direction may increase transmission of COVID 19 within our community.

All Victorians play an important role in minimising the impact of COVID-19. We strongly encourage you to comply with the CHO's direction and appreciate your co-cooperation.

### Mass gatherings

Dear (insert name)

As you may be aware, Victoria's Minister for Health has declared a state of emergency throughout Victoria in response to the coronavirus or COVID-19 situation. Following this declaration, Victoria's Deputy Chief Health Officer has exercised emergency powers under the *Public Health and Wellbeing Act 2008* to make a direction to eliminate or reduce the serious risk to public health posed by COVID-19.

We are contacting you as Department of Health and Human Services has received information that you may be not complying with the Mass Gatherings direction issued by Victoria's Deputy Chief Health Officer.

Please be aware that:

- A person who owns, controls or operates premises in Victoria must not allow a mass gathering to occur on premises
- A person must not organise a mass gathering on premises in Victoria.

A mass gathering means:

- A gathering of five hundred (500) or more persons in a single undivided outdoor space at the same time; or
- A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.

A number of exclusions exist such as at an airport and a hotel, motel or other accommodation facility that is necessary for the normal operation of accommodation services.

This email/letter seeks to inform you of your obligations. A copy of the direction and a fact sheet is attached to this letter/email.

### **Why it is important to comply with the Deputy Chief Health Officer's direction**

The Victorian Government is very concerned about the serious, and potentially catastrophic, risk to public health arising from COVID-19 throughout Victoria.

The restrictions are designed to limit transmission of COVID in places where there is high density of individuals in close proximity. This is because many individuals have been identified as being infected with COVID-19 and more cases are expected.

All Victorians play an important role in minimising the impact of COVID-19. We strongly encourage you to comply with the CHO's direction and appreciate your co-cooperation.

## Appendix 2 – Evidence on physical distancing interventions for reducing impact of COVID-19

Last updated 27 March 2020

This document provides a review of evidence regarding the effectiveness of physical distancing interventions on the COVID-19 epidemic. As evidence is rapidly emerging this document may not contain all relevant available information. It also contains some references to reports and pre-prints that have not undergone peer-review. Therefore, caution should be taken in interpretation. Furthermore, as new evidence emerges the picture of the effectiveness will change. This document will be updated to reflect the changing evidence base.

### Introduction

Physical distancing between people aims to minimise interactions between people to limit the opportunities for disease to spread from an infected person to an un-infected person. It is an example of a non-pharmaceutical intervention (NPI) that can be employed to control a disease outbreak. Measures to bring about physical distancing amongst populations have been utilised in previous efforts to control influenza epidemics and pandemics.

Observational and modelling studies have provided evidence to help guide the use of physical distancing measures for influenza. Although these can provide some insight into how we might expect physical distancing to influence the progression of the COVID-19 pandemic, COVID-19 has its own disease characteristics which will influence the impact of physical distancing measures. Evidence of the impact of social distancing is beginning to emerge from countries in which the epidemic commenced earlier than in Australia, particularly China. Additionally, modelling studies using information on the epidemiological features of COVID-19 are estimating the impact of different physical distancing measures.

This review consists of three parts:

- A review of the epidemiological features of COVID-19 and their implications for physical distancing in COVID-19
- A review of modelling analyses estimating the effects of physical distancing on the COVID-19 epidemic
- A review of evidence regarding physical distancing measures in the setting of pandemic influenza

## 1. Epidemiological features of COVID-19 that impact the effectiveness of physical distancing measures

### 1.1 Reproductive number

The basic reproductive number ( $R_0$ ) is the number of individuals a single infected individual will infect in an otherwise fully susceptible population. This value will be influenced by features inherent to the pathogen, and characteristics of the population, such as population density and the nature and frequency of human-human interactions. As such, there is no single true value of  $R_0$  for any disease, including COVID-19, as it will be influenced by population-specific factors.

Published estimates of  $R_0$  for COVID-19 have ranged between 2.1 and 3.58. (1–6)

### 1.2 Modes of transmission

Early evidence suggests that SARS-CoV-2 (the virus that causes COVID-19) is primarily transmitted via respiratory droplets transmitted during close contact, and via fomites. (7) However, there is evidence of viral shedding in faeces (8) and viral persistence in aerosols (9,10), suggesting that aerosol and faecal-oral transmission may also occur. Transmission may also be possible via ocular surfaces. (11)

### 1.3 Timing of transmission

Analyses of viral shedding suggest that the time of peak viral load is early in the course of illness, around the time that symptoms develop, and that viral load then reduces over time. (10) The median duration of detected viral shedding of 191 patients in Wuhan was 20.0 days (IQR: 17.0-24.0 days) in survivors. (12) Importantly, these

measurements of viral load cannot distinguish infectious from non-infectious virus. Although the two types of virus are often correlated early in influenza, we cannot say for sure for whether the same holds for COVID-19 at this stage.

Evidence from case and cluster reports (13–15), and several epidemiological analyses (16–19) suggest that COVID-19 can be transmitted prior to the onset of symptoms.

#### **1.4 Incubation period**

An analysis of 55,924 laboratory-confirmed cases, found the mean incubation period was estimated to be 5.5 days. (7) Another analysis of 181 confirmed cases outside of Hubei Province found the mean incubation period to be 5.1 days (95% CI: 4.5-5.8 days). (20)

#### **1.5 Duration of illness**

An analysis of the clinical course of 52 critically ill adult patients with SARS-CoV-2 pneumonia who were admitted to the intensive care unit (ICU) of a Chinese hospital in late December 2019 and January 2020, found the median time from symptom onset to death was calculated to be 18 days. (21)

#### **1.6 Demographic features of COVID-19**

In general, COVID-19 causes a much more severe illness in older people, with case-fatality rates increasing with age, particularly for those aged 80 years and older. (7,22)

Children have thus far accounted for few cases of COVID-19 and are unlikely to have severe illness. (23) However, the role of children in transmission of COVID-19 remains unclear. In a pre-print analysis of household contacts of cases, it was found that children were infected at the same rate as older household contacts. (24) In the report of the WHO-China joint mission it was noted that children accounted for 2.4% of cases, that infected children had largely been identified through contact tracing, and there was no recollection of episodes of transmission from child to adult. (7)

#### **1.7 Overview of the impact of key epidemiological features for physical distancing interventions**

Key points arising from these epidemiological features are:

- COVID-19 is highly transmissible, and although close contact is more likely to result in transmission, transmission may be possible from minor contact, or through contact with infectious surfaces
- The COVID-19 epidemic in many areas is following exponential growth patterns, so case counts can be expected to rise rapidly
- As evidence suggests that people can transmit COVID-19 prior to the onset of symptoms, and because infectiousness appears to be highest at the time of symptom onset, isolating cases at the point of symptom onset may be inadequate to prevent transmission
- As there is a delay between infection and symptom onset and a delay between symptom onset and case detection, there will be a delay (of roughly 10 days) between implementation of an intervention and seeing its impact on case counts
- As there is a delay between symptom onset and death, there will be an even longer delay to seeing the impact of interventions on death rates (up to two weeks)
- The role of children in COVID-19 transmission remains unclear and would have significant implications for the effect of school closures on the epidemic

## **2. Modelling studies evaluating potential impact of physical distancing interventions for COVID-19**

### **2.1 Modelling the impact of physical distancing interventions**

[Update]

### 2.1.1 Imperial College report on non-pharmaceutical interventions

Ferguson et al of Imperial College published a report estimating the impact of a range of non-pharmaceutical interventions (physical distancing interventions) on the COVID-19 epidemic in the UK and the US. (26) Effects of different combinations of population-level interventions were reviewed. The report describes two alternative strategies: suppression and mitigation. It describes suppression as aiming to reduce the R value to less than 1, resulting in transmission ceasing in the population. Mitigation, however, aims to reduce the impact of the epidemic, whilst infection builds up in the community, rather than causing transmission to cease. Actions towards mitigation would include preventing infection amongst those most vulnerable to severe disease and slowing the rate of infection.

The report suggests that an approach of mitigation would result in the critical care capacity being overwhelmed many times over, resulting in hundreds of thousands of deaths. Only a combination of very strong measures taken together (including case isolation, household quarantine, general social distancing, school and university closure) is predicted to avoid critical care capacity being overwhelmed.

The report suggested that if suppression is being pursued, then earlier implementation is better, but if mitigation is being pursued then it is better to implement interventions closer to the peak of the epidemic. School closures were estimated to have a greater role on a suppression strategy, rather than mitigation. The modelling also suggested that relaxing the intervention whilst the population remained susceptible would result in a later, large peak that would also overwhelm critical care capacity, suggesting that policies may need to remain until a vaccine was available.

The report concluded that suppression seemed the only viable option, given that mitigation would result in health care capacity being overwhelmed many times over. However, they noted the uncertainty in whether a suppression approach could be achieved, as well as the uncertainty in modelling estimates.

### 2.1.2 Early modelling analysis from Australia

A modeling analysis, published as a pre-print, conducted by Australian researchers, Chang et al (27) suggested that the best intervention strategy is a combination of restriction on international arrivals to Australia, case isolation, and social distancing with at least 80-90% compliance for a duration of 13 weeks. They noted that compliance levels below this would lengthen the duration of required suppression measures. They also note that resurgence of disease is possible once interventions cease, and their analysis does not attempt to quantify the impact of measures beyond the 28-week horizon of analysis.

Another Australian pre-print analysis by Di Lauro et al (28) reviewed the optimal timing for “one shot interventions”, interventions that are assumed to only be able to be implemented once in the course of an epidemic and for a finite time period. This suggested that optimal timing depended on the aim of the intervention; that to minimise the total number infected the intervention should start close to the epidemic peak to avoid rebound once the intervention is stopped, while to minimise the peak prevalence, it should start earlier, allowing two peaks of comparable size rather than one very large peak.

### 2.1.3 Modelling the impact of physical distancing interventions in China

Using a stochastic transmission model and publicly available data, Kucharski et al (29), estimated the effect of the distancing interventions introduced in China on the 23rd of January. the median daily reproduction number ( $R_t$ ) in Wuhan declined from 2.35 (95% CI 1.15–4.77) 1 week before travel restrictions were introduced on Jan 23, 2020, to 1.05 (0.41–2.39) 1 week after.

An pre-print analysis by Lai et al (30) suggested that without the non-pharmaceutical intervention implemented in China (early detection and isolation of cases, travel restrictions and reduction of interpersonal interactions) the number of infections in Wuhan would have been many fold higher. They suggested that had the NPIs been conducted one week, two weeks, or three weeks earlier in China, cases could have been reduced by 66%, 86%, and 95%, respectively. They also suggested that social distancing interventions should be continued for the next few months to prevent case numbers increasing again after travel restrictions were lifted on February 17, 2020.

A pre-print analysis by Prem et al (31) reviewed the impact of China's interventions on social-mixing patterns and estimated the effects of different approaches to lifting the interventions. They suggested that control measures aimed at reducing social mixing can be effective in reducing the magnitude and delaying the epidemic peak. They suggested the interventions would have the most impact if continued until April, and if return to work was staggered. These results were sensitive to the duration of infectiousness and the infectiousness of children.

## **2.2 Modelling the potential impact of case isolation and contact tracing**

An analysis by Hellewell et al (32) considered the possibility of controlling a COVID-19 outbreak with contact tracing and case isolation alone. Under some parameter assumptions it was possible to control the outbreak without the need for physical distancing measures. However, the probability of controlling the outbreak in this way decreased with an  $R_0$  of 2.5 or 3.5, when there was a larger initial infectious population, a longer delay to case detection and a larger proportion of pre-symptomatic transmission. The study concludes that "in most plausible outbreak scenarios, case isolation and contact tracing alone is insufficient to control outbreaks, and that in some scenarios even near perfect contact tracing will still be insufficient, and further interventions would be required to achieve control."

A pre-print analysis by Kretzschmar et al (33), suggests it is unlikely that case isolation and contact tracing alone could control a COVID-19 outbreak. They note that if delay between onset of infectiousness and isolation is more than 4 to 6 days, or the proportion of asymptomatic cases is greater than 40% the outbreak cannot be controlled even with perfect tracing. However, they note that contact tracing efforts can still be a valuable tool in mitigating the epidemic impact.

## **2.3 Modelling the impact of school closures for COVID-19**

An early report from Di Domenico et al (34), used data from three French towns with COVID-19 outbreaks and assumed children had a susceptibility to COVID-19 of 20% relative to adults and relative infectiousness of 50%. With these assumptions they suggested that school closure alone would have limited benefit in reducing the peak incidence (less than 10% reduction with 8-week school closure for regions in the early phase of the epidemic). However, when coupled with 25% adults teleworking, 8-week school closure would be enough to delay the peak by almost 2 months with an approximately 40% reduction of the case incidence at the peak.

## **3. Evidence on physical distancing measures for pandemic influenza**

There are important differences between the COVID-19 pandemic and previous influenza pandemics. Three important differences are:

- It is well established that school children play a major role in spreading influenza virus because of higher person-to-person contact rates, higher susceptibility to infection, and greater infectiousness than adults. In contrast, children have accounted for fewer cases in the COVID-19 pandemic and their role in transmission is unclear.
- Pandemic influenza is thought to have a shorter incubation period (approximately 2 days) compared to COVID-19 (approximately 5 days).
- There is likely a greater proportion of severe and critical cases of COVID-19, than in pandemic influenza. (35)
- However, the evidence regarding physical distancing measures on influenza pandemics may still provide some insight into the role they may play in the response to COVID-19.

A recent review (prior to the COVID-19 outbreak) by Fong et al (36) surveyed the evidence for NPIs in pandemic influenza, in particular the effects of school closures, workplace measures and avoiding crowding.

### **3.1 School closures**

They found compelling evidence that school closure can reduce influenza transmission, especially among school aged children. However, the duration and optimal timing of closure were not clear because of heterogeneity of data, and transmission tended to increase when schools reopened.

A correlation analysis between weekly mortality rates and interventions (which included school closure) during the 1918–19 pandemic in cities in the United States estimated that early and sustained interventions reduced mortality rates by  $\leq 25\%$ . (37)

Two studies conducted in Hong Kong as a public health response to the 2009 influenza A(H1N1) pandemic estimated that school closures, followed by planned school holidays, reduced influenza transmission. (38,39)

Two studies conducted in Japan estimated that due to reactive school closures the peak number of cases and the cumulative number of cases in the 2009 pandemic were reduced by  $\approx 24\%$  (40) and 20% (41). However, two studies (one evaluating the response to the 2009 pandemic and the other seasonal influenza) estimated that reactive school closures had no effect in reducing the total attack rate and duration of school outbreaks, and the spread of influenza. (42,43)

It is important to note that school closures can have a disproportionate impact on vulnerable groups (eg low-income families), particularly when meals are provided by schools. This could be ameliorated by dismissing classes but allowing some children to attend schools for meals or enable parents to work. It has also been noted that school closures may have an impact on health workforce availability, as health care workers may have to care for children.

### 3.2 Workplace interventions

A systematic review of workplace measures by Ahmed et al (44) concluded that there was evidence, albeit weak, to indicate that such measures could slow transmission, reduce overall attack rates or peak attack rates, and delay the epidemic peak. In this review, epidemiological studies reviewed the effects of segregating persons into small subgroups and working from home. Modelling studies most frequently simulated the effects of workplace measures as reducing contacts by 50%.

In this review, for studies modelling  $R_0 \leq 1.9$ , workplace social distancing measures alone (single intervention) showed a median reduction of 23% in the cumulative influenza attack rate in the general population. Workplace social distancing measures combined with other nonpharmaceutical interventions showed a median reduction of 75% in the general population. However, the effectiveness was estimated to decline with higher  $R_0$  values, delayed triggering of workplace social distancing, or lower compliance.

Paid sick leave could improve compliance with a recommendation to stay away from work while ill. (45,46)

### 3.3 Avoiding crowding

The review by Fong et al (36) identified three studies that assessed the effects of measures to avoid crowding (such as bans on public gatherings, closure of theatres) in pandemic influenza. These suggested that such measures helped to reduce excess mortality in the 1918 pandemic and a natural study comparing the effect of accommodating pilgrims for World Youth Day in smaller groups rather than a large hall reduced transmission in 2008.

### Script

Good morning / afternoon, I'm XXX. Can I confirm who I'm speaking with?

|  |
|--|
|  |
|  |

I am working with the Department of Health and Human Services to support people in quarantine following their arrival in Australia, and I'm giving you a call to check on your welfare. We know that this may be a stressful time for you, and our aim is to make sure that you are as comfortable as you can be during this quarantine period.

I am a Victorian Public Servant and any information that you provide to me is subject to privacy legislation.

We will be checking in with you and the people you have been travelling with every 24 hours to make sure that you are ok and to find out if you have any health, safety or wellbeing concerns that we can address.

There are 23 questions in total, and it should take only a few minutes to go through these with you. When you answer, we would like to know about you as well as any other occupants in your room.

If you have needs that require additional support, we will connect you with another team who can provide this support.

### Introductory questions

1. Are you still in Room XXX at the hotel? Circle YES / NO

|  |
|--|
|  |
|--|

|  |
|--|
|  |
|--|

2. Are you a lone occupant in your hotel room? Yes/No if No:

a. Who are your fellow occupants, including your partner or spouse, children or fellow travellers?

| Name | Relationship | Age<br>(children/dependents) |
|------|--------------|------------------------------|
|      |              |                              |
|      |              |                              |
|      |              |                              |

3. Have you or your fellow occupants had to leave your room for any reason? If so, what was the reason? YES /NO

|  |
|--|
|  |
|  |
|  |
|  |

### Health questions

4. Have you had contact with a medical staff nurse whilst in quarantine? If yes, can you please provide details and is it being monitored?

|  |
|--|
|  |
|  |

5. Have you or your fellow occupants had any signs or symptoms of COVID-19, including fever, cough, shortness of breath, chills, body aches, sore throat, headache, runny nose, muscle pain or diarrhoea)?

|  |
|--|
|  |
|  |

6. Do you or anyone you are with have any medical conditions that require immediate support? (ie smokers requiring nicotine patches)

|  |
|--|
|  |
|  |

7. Do you, or anyone in your group (including children) have any immediate health or safety concerns?

|  |
|--|
|  |
|  |

8. Do you have any chronic health issues that require management?

|  |
|--|
|  |
|  |
|  |
|  |

9. Do you or anyone you are with have enough prescribed medication to last until the end of the quarantine period?

|  |
|--|
|  |
|  |

10. Are you keeping up regular handwashing?

|  |
|--|
|  |
|  |

11. What sort of things help you to live well every day? For example, do you exercise every day, do you eat at the same time every day?

|  |
|--|
|  |
|  |
|  |
|  |

### **Safety questions**

12. How is everything going with your family or the people you are sharing a room with?

|  |
|--|
|  |
|  |
|  |
|  |

13. Is there anything that is making you feel unsafe?

|  |
|--|
|  |
|  |
|  |
|  |

14. Are there any concerns that you anticipate in relation to your own or other occupant's safety that might become an issue in the coming days?

|  |
|--|
|  |
|  |
|  |
|  |

*If the person answers yes to either question 10 or the one above, you could say:*

- You have identified safety concerns -would you like me to establish a safe word if you require additional support regarding your safety?

If yes...

- The word I am providing is <xxx> (different word for each individual). You can use that word in a conversation with me and I will know that you need immediate support/distance from other occupants in the room or may be feeling a high level of distress.

*Where family violence, abuse or acute mental health is identified as an issue refer to specific guidance / escalate for specialist support.*

### **Wellbeing questions**

15. How are you and any children or other people that you are with coping at the moment?

|  |
|--|
|  |
|  |
|  |

16. Do you have any immediate concerns for any children / dependents who are with you?

|  |
|--|
|  |
|  |

17. Do you have any additional support needs that are not currently being met, including any access or mobility support requirements?

|  |
|--|
|  |
|  |

18. Have you been able to make and maintain contact with your family and friends?

|  |
|--|
|  |
|  |

19. What kind of things have you been doing to occupy yourself while you're in isolation, e.g. yoga, reading books, playing games, playing with toys?

|  |
|--|
|  |
|  |

20. Have you been able to plan for any care responsibilities that you have in Australia? Can these arrangements be maintained until the end of the quarantine period?

|  |
|--|
|  |
|  |

### Final

21. What has the hotel's responsiveness been like? Have you had any trouble getting food, having laundry done, room servicing etc.?

|  |
|--|
|  |
|  |

22. Do you have any other needs that we may be able to help you with?

|  |
|--|
|  |
|  |

23. Do you have any other concerns?

|  |
|--|
|  |
|  |

### End of survey

Thank you for your time today. We will contact you again tomorrow.

## Papers for Directions meeting at 4pm today

**Attachments:** Exemptions policy options.docx (31.14 kB); DRAFT Covid-19 protocol - general.docx (61.25 kB); DRAFT Covid-19 protocol - Minors as detainees.docx (56.08 kB); DRAFT Covid-19 protocol - non-compliant.docx (56.88 kB); DRAFT Covid-19 protocol - post 14 day isolation.docx (55.52 kB); DRAFT Covid-19 protocol - Temporary leave from hotel.docx (57.22 kB)

(from todays Detention meeting-LL)

Hi all

Attached are the draft protocols for the AOs as well as a draft policy for exemptions. They are not all complete as we are trying to work through the various issues in the live environment and are still checking things with legal. But they give a starting point for us to do things and stay compliant with the law.

Kind regards  
Meena

# COVID-19 compliance

## Procedure for dealing with uncooperative detainees

### Purpose of this process

To outline the procedure for DHHS authorised officers (*Public Health and Wellbeing Act 2008*) when returned travellers from overseas are uncooperative at the airport in complying with the compulsory 14-day isolation requirement.

### Information for authorised officers

Role of authorised officer and under what direction...

### Options to facilitate compliance

- Provide detainee opportunity to communicate including any request for a third-party communicator (such as translator)
- Issuing a warning if the detainee chooses not to comply with the requirements
- Issuing a Penalty Infringement Notice
- Directing Victoria Police or accommodation security to physically detain the non-compliant individual for transfer to their secure site.
- Anything else???

### Transfer of uncooperative detainee to secure accommodation

Separate mode of transport for uncooperative detainees to secure site for 14-day isolation. Ensure appropriate safety measures are taken including child locks of doors and safety briefing for drivers etc. **What information is provided to the hotel accommodation provided?**

### Unauthorised departure from secure accommodation

The *Protocol for temporary leaving of secure accommodation* outlines approved reasons detainees can leave their secure accommodation. If there is reason to believe a detainee is not complying with the notice of direction isolation requirement :

- Notify security or Police to check the detainee is in their room
- If the detainee has left their room, authorised officer/police/security to advise the detainee they are required to comply with the notice of direction isolation requirement.
- Does the authorised officer need to direct Police or security to assist with the facilitation of detainees back to their secure accommodation ?

### Information management

Ensure details are recorded on the detainee case file.

## RE: Operation Soteria - Draft Healthcare and Welfare Plan for Mandatory Quarantine

---

**From:** "Meena Naidu (DHHS)" [REDACTED]  
**To:** "Finn Romanes (DHHS)" <[REDACTED]> "Pam Williams (DHHS)" [REDACTED]  
**Cc:** "SCC-Vic (State Controller Health)" <[REDACTED]>, "Simon Crouch (DHHS)" [REDACTED], "Annaliese Van Diemen (DHHS)" [REDACTED], "Brett Sutton (DHHS)" [REDACTED], "Claire Harris (DHHS)" [REDACTED], "Euan Wallace (DHHS)" [REDACTED]  
**Date:** Sat, 18 Apr 2020 23:02:11 +1000  
**Attachments:** Protocol for AO - Direction and Detention notice.DOCX (1.09 MB)

Hi all

Apologies for the delay. Please find attached the compliance plan. It still requires a bit of work to clean it up but did not want to delay distribution further.

Kind regards  
 Meena

**Subject:** Operation Soteria - Draft Healthcare and Welfare Plan for Mandatory Quarantine

Dear Pam and Chris / Deputy State Controller – Operation Soteria

A number of people in various roles, especially my colleagues Claire Harris and others, have worked through today to get this draft plan ready for use.

There are only a small number of residual issues, which are listed now as comments in the margin, that are beyond my role to resolve. As you know, Public Health Command is very keen to provide the response with the best advice in the space of healthcare and welfare, and I commend this plan to you.

I recommend this plan is endorsed as an interim plan, the comments are addressed through decision of the DHHS Commander / State Health Coordinator or deputy (as I understand it the leads for the actual provision of medical care specifically and the roles – through REDACTED that commissioned general practitioners) and then the interagency Soteria group could be provided the plan by Deputy State Controller Health – Operation Soteria for awareness and any comments and endorsement.

Can you / Chris take it from here?

Kind regards

Finn

Dr Finn Romanes

DRAFT

# Purpose

This purpose of this document is to:

- assist and guide departmental authorised officers (AOs) undertake compliance and enforcement functions and procedures for the direction and detention direction issued under the *Public Health and Wellbeing Act 2008* (PHWA).
- provide clarity about the role and function of AOs.

## Processes may be subject to change

It is acknowledged that the covid-19 response is a rapidly evolving situation and matters are subject to fluidity and change. This is particularly the case for the direction and detention notice and the use of hotels to facilitate this direction.

To this end, this document will not cover every situation and will be subject to change. For example, the process for collecting data and signed direction and detention notices may change.

This document aims to describe key responsibilities and provide a decision-making framework for AOs. AOs are encouraged to speak to compliance leads for further advice and guidance.

## Direction and detention notices

An initial notice was issued on 27 March 2020, which ordered the detention of all persons who arrive into Victoria from overseas on or after midnight on 28 March 2020, requiring they be detained in a hotel for a period of 14 days. A second notice (No 2) was issued on 13 April 2020 that requires the detention of all person who arrived into Victoria from overseas on or after midnight on 13 April 2020, requiring they be detained in a hotel for a period of 14 days.

The directions are displayed on the department's website at <https://www.dhhs.vic.gov.au/state-emergency> and were made by the Deputy Chief Health Officer or Chief Health Officer:

More information can be obtained from:

<https://www.dhhs.vic.gov.au/information-overseas-travellers-coronavirus-disease-covid-19>

## AO Operational contacts

For URGENT operational advice contact the on call (as per the roster) DHHS Compliance management.

## At a glance: Roles and responsibilities

The role of an AO is primarily focussed on compliance and meeting obligations under the PHWA.

AOs should be aware that their role and scope is related to administration of, and compliance with, the direction and detention notice under the *Public Health and Wellbeing Act 2008*.

Table 1 is a high-level description of the responsibilities of each role not a specific list of functions.

**Table 1 Roles and responsibilities of staff at hotels**

| Role   | Responsibility   | Authority  |
|--|--|--|
| <b>Authorised Officers under the <i>Public Health and Wellbeing Act 2008</i> at airport and hotels</b> | <p>Primary responsible for:</p> <ul style="list-style-type: none"> <li>administration of, and ensuring compliance with, the Direction and Detention Notices (27 March 2020 and 13 April 2020)</li> <li>meeting obligations under the PHWA (noting it is expected that the Compliance Lead conducts the review of those subject to detention).</li> </ul> <p>AOs are required to keep records (written or electronic) of compliance and other issues they become aware of.</p>  | <p><i>Public Health and Wellbeing Act 2008</i> s199</p> <p>Direction and Detention Notices (No 1 and No 2)</p> |
| <b>Hotel site lead</b>   | <ul style="list-style-type: none"> <li>Supports the health and well-being of staff,</li> <li>Liaises with airport command and staff from other departments and agencies represented at the hotel</li> <li>Provides situational awareness and intelligence to inform transport providers, state-level emergency management arrangements and airport operations</li> <li>Provides a point of reference to all site-staff to help resolve operations, logistics or site-related issues and / or escalations required</li> <li>Ensures appropriate records management processes are in place.</li> </ul> |  |
| <b>Medical staff</b>   | <ul style="list-style-type: none"> <li>Provide 24 hour on-call medical support subject to demand</li> <li>Provide welfare to detainees through a daily welfare check — welfare officers email <a href="mailto:\COVIDQuarantine@dhhs.vic.gov.au">\COVIDQuarantine@dhhs.vic.gov.au</a> and phone the site AO individually to alert AO of medical and welfare issues</li> <li>Provide a satisfaction survey for residents to complete each week.</li> </ul>   | Contracted by DHHS.  |

|                                   |   |  |
|-----------------------------------|---|--|
| <b>Department and hotel staff</b> | <ul style="list-style-type: none"> <li>• Capture client personal needs, e.g. dietary, medication, allergies, personal hygiene needs</li> <li>• Deliver hyper-care (concierge) services onsite</li> <li>• Manage contracts with accommodation providers</li> <li>• Manage transport arrangements from the airport and other locations detainees may be permitted to go</li> <li>• Manage material needs including food and drink.</li> </ul> |  |
| <b>Security</b>                   | <ul style="list-style-type: none"> <li>• To assist AOs in ensuring detainees comply with notices and permissions. This includes ensuring detainees do not leave hotel rooms, movement of detainees where they have permission to leave rooms, assisting with release</li> </ul>   |  |

**AOs should be cognisant that persons subject to detention will be tired and stressed. AO may need to use conflict negotiation and mediation skills to help persons settle into the new environment.**

# Background

## Key points

- The detention policy is given effect through the direction and detention notices.
- AOs should be clear on their authorisation before commencing enforcement activities.

## Background to the mandatory quarantine (detention) intervention

A mandatory quarantine (detention) approach was introduced by the Victorian Government, consistent with the Commonwealth Government ([Department of Health Information for International Travellers](#)) through a policy that a detention order would be used for all people arriving from overseas into Victoria from midnight on Saturday 28 March 2020. The policy is given effect through a direction and detention notice under the PHWA. See <https://www.dhhs.vic.gov.au/state-emergency>

The objectives of the plan for people returning from overseas to Victoria are:

- To identify any instance of illness in returned travellers in order to detect any instance of infection
- To ensure effective isolation of cases should illness occur in a returned traveller
- To provide for the healthcare and welfare needs of returned travellers who are well or shown to be COVID-19 negative but are required to remain in quarantine for the required 14 days
- To implement the direction of the Deputy Chief Health Officer through meeting:
  - A requirement to detain anyone arriving from overseas for a period of 14 days at a hotel in specific room for a specified period unless an individual determination is made that no detention is required
  - A requirement to record provision of a detention notice showing that the order was served and to manage access to information on who is in detention using a secure database
  - A requirement to undertake checks every 24 hours by a department Compliance Lead during the period of detention
  - A requirement to fairly and reasonably assess any request for permission to leave the hotel room / detention. This may be undertaken as part of a wholistic approach involving AOs, DHHS welfare staff, medical practitioners, nurses and other specialist areas if needed.

## Enforcement and Compliance Command for Mandatory Quarantine

### Deliverables of the enforcement and compliance function

The Covid-19 Compliance Executive Lead under the Covid-19 Public Health Incident Management Team is responsible for:

- overall public health control of the detention of people in mandatory quarantine
- oversight and control of authorised officers administering detention
- administration of decisions to detain and decision to grant leave from detention.

### Authorised officer\* and Chief Health Officer obligations

Sections 200(1)(a) and 200(2) – (8) of the *Public Health and Wellbeing Act 2008* (PHWA) set out several emergency powers including detaining any person or group of persons in the emergency area for the period reasonably necessary to eliminate or reduce a serious risk to health.

Departmental staff that are authorised to exercise powers under the PHWA may or may not also be authorised to exercise the public health risk powers and emergency powers given under s.199 of the PHWA by the Chief Health Officer (CHO). This authorisation under s.199 has an applicable end date; relevant authorised officers (AOs) must be aware of this date. The CHO has not authorised council Environmental Health Officers to exercise emergency powers.

**Note:** Any AO that is unsure as to whether you have been authorised under s. 199 should contact administrative staff in the department's Health Protection Branch prior to enforcing compliance with the Direction and Detention Notices.

## Mandatory requirements for AOs

- AOs have mandatory obligations that must be followed before carrying out functions.
- AO must show ID card before carrying out actions/exercising powers
- AO must explain to the person the reason why it is necessary to detain them – if not practicable, it must be done as soon as practicable
- AO must warn the person that refusal or failure to comply without reasonable excuse, is an offence before carrying out actions/exercising powers
- AO must facilitate a reasonable request for communication
- Lead AO must review every 24 hours, whether continued detention of the person is reasonably necessary to eliminate or reduce a serious risk to health
- AO must give written notice to the CHO that detention has been made and if it is reasonably necessary to continue detention to eliminate or reduce the serious risk to public health.

The notice to the CHO must include:

- the name of the person being detained
- statement as to the reason why the person is being, or continues to be, subject to detention.

Following receipt of a notice, the CHO must inform the Minister as soon as reasonably practicable.

*\* A departmental Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order*

## Use of a Business System –Quarantine and Welfare System COVID-19 Compliance Application

The Quarantine and Welfare System is comprised of two applications:

- COVID-19 Compliance Application - This application supports Authorised Officers to maintain Detainee and Detention Order records
- COVID-19 Welfare Application (not part of Authorised Officer responsibilities).

A **User Guide** is available to guide Authorised Officers.

**Support email** for users: [ComplianceandWelfareApplicationSupport@dhhs.vic.gov.au](mailto:ComplianceandWelfareApplicationSupport@dhhs.vic.gov.au)

Support will be active between 8am and 8pm. You can email support for access issues, technical issues, application use questions. A **phone number** will also be provided shortly.

# Authorised officers and powers

## Key points

- AOs must only act within their legal authority.
- AOs must follow mandatory requirements before carrying out powers.

## Authorisation under section 200 for the purposes of the emergency order

Only public servants who have been authorised as AOs under the PHWA and **also** authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the PHW can exercise emergency powers under section 200. The powers extend only to the extent of the emergency powers under section 200 and as set out in the PHWA.

**AOs are encouraged to read Part 9 and seek advice from AO Operations Lead if they are unsure in the administration of their powers**

## Powers and obligations under the Public Health and Wellbeing Act 2008

The general powers are outlined under Part 9 of the PHWA (Authorised Officers). The following is an overview of powers and obligations. It does not reference all powers and obligations.

### Authorised officer obligations:

#### Produce your identity card - s166

**Before** exercising powers provided to you under the PHWA:

At any time during the exercise of powers, if you are asked to show your ID card  
As part of good practice, you should produce your identity card when introducing yourself to occupiers or members of the public when attending complaints or compliance inspections.

#### Inform people of their rights and obligations

You may request a person to provide information if you believe it is necessary to investigate whether there is a risk to public health or to manage or control a risk to public health.

Before exercising any emergency powers, you must, unless it is not practicable to do so, warn the person that a refusal or failure to comply without a reasonable excuse, is an offence.

# Charter of Human Rights obligations

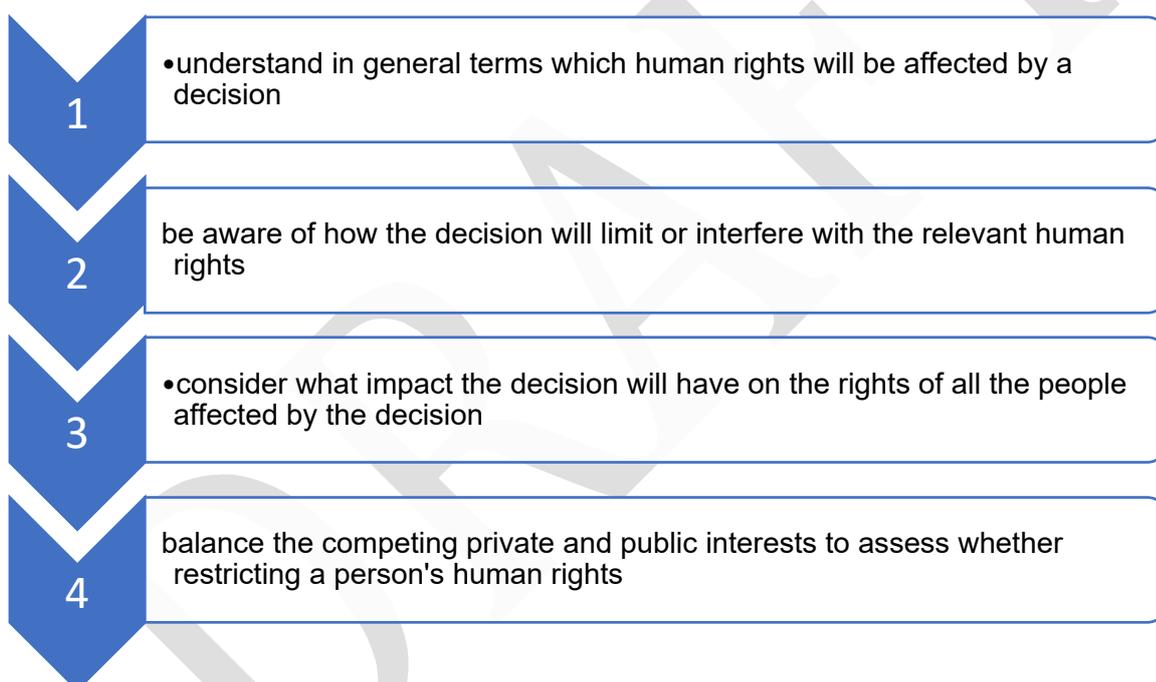

## Key points

- AO must act compatibly with human rights.
- AO must give 'proper consideration' to the human rights of any person(s) affected by an AO's decision.

## Department AO obligations under the *Charter of Human Rights and Responsibilities Act 2006*

- Department AOs are public officials under the Charter of Human Rights. This means that, in providing services and performing functions in relation to persons subject to the Direction and Detention Notice, department AOs must, at all times: act compatibly with human rights; and
- give 'proper consideration' to the human rights of any person(s) affected by a department AO's decisions.

## How to give 'proper consideration' to human rights

The relevant Charter Human Rights that departmental AOs need to be aware of that may be affected by a decision:

| Charter Right   | Obligation  |
|---|---|
| <b>Right to life</b>  | <ul style="list-style-type: none"> <li>• This includes a duty to take appropriate steps to protect the right to life and steps to ensure that the person in detention is in a safe environment and has access to services that protect their right to life</li> </ul> |
| <b>Right to protection from torture and cruel, inhuman or degrading treatment</b> | <ul style="list-style-type: none"> <li>• This includes protecting persons in detentions from humiliation and not subjecting persons in detention to medical treatments without their consent</li> </ul>   |
| <b>Right to freedom of movement</b>   | <ul style="list-style-type: none"> <li>• while detention limits this right, it is done to</li> </ul>  |

| Charter Right  | Obligation   |
|--|--|
|  | <p>minimise the serious risk to public health as a result of people travelling to Victoria from overseas</p>   |
| <b>Right to privacy and reputation</b>                     | <ul style="list-style-type: none"> <li>• this includes protecting the personal information of persons in detention and storing it securely</li> </ul>  |
| <b>Right to protection of families and children</b>        | <ul style="list-style-type: none"> <li>• this includes taking steps to protect families and children and providing supports services to parents, children and those with a disability</li> </ul>               |
| Property Rights  | <ul style="list-style-type: none"> <li>• this includes ensuring the property of a person in detention is protected</li> </ul>  |
| <b>Right to liberty and security of person</b>             | <ul style="list-style-type: none"> <li>• this includes only be detained in accordance with the PHWA and ensuring steps are taken to ensure physical safety of people, such as threats from violence</li> </ul> |
| <b>Rights to humane treatment when deprived of liberty</b> | <ul style="list-style-type: none"> <li>• this includes treating persons in detention humanely.</li> </ul>  |

# Airport

## Key points

- AO must follow mandatory requirements first (e.g show ID card, etc).
- AO must check that a direction and detention notice is filled in properly.
- AO must provide factsheet and privacy collection notice to person.

## Key responsibilities

The following outlines required procedures at the airport for departmental Authorised officers.

| Authorised Officers* Responsibility   | Mandatory obligation   | Section (PHWA)   |
|---|--|--|
|   | <ul style="list-style-type: none"> <li>• must declare they are an Authorised Officer and show AO card</li> </ul>   | Yes<br><br>Section 166   |
|  | <ul style="list-style-type: none"> <li>• must provide a copy of the Direction and Detention Notice to each passenger (notification to parent/guardian may need to be conducted over the phone and interpretation services may be required) and:               <ul style="list-style-type: none"> <li>– explain the reasons for detention</li> <li>– warn the person that refusal or failure to comply with a reasonable excuse is an offence and that penalties may apply</li> <li>– <b>remind the person they must keep their detention notice.</b></li> </ul> </li> <li>• if practicable at this time, provide the person with a copy of the department's privacy collection notice. If not practicable, this can be provided at the hotel.</li> </ul> | Yes.<br><br>If it is not practicable to explain the reason for detention prior to subjecting the person to detention, the AO must do so as soon as practicable.<br><br>This may be at the hotel, however every effort should be made to provide the reason at the airport [s. 200(3)]<br><b>(mandatory AO obligation).</b> |

|   |  |     |                |
|---|--|-----|----------------|
|    | <ul style="list-style-type: none"> <li>ensure each Direction and Detention Notice: <ul style="list-style-type: none"> <li>states the full name of the person being detained, date of birth and mobile phone number (if applicable)</li> <li>contains signature of person being detained or their guardian as receipt of the notice</li> <li>states the name of AO</li> <li>contains signature of AO</li> <li>contains the hotel name at which the person will be detained</li> <li>contains the date of detention</li> </ul> </li> </ul> |     |                |
|    | <ul style="list-style-type: none"> <li>record issue and receipt of the notice through a scanned photograph and enter into COVID19 Compliance application<sup>1</sup></li> <li>request person subject to detention present to AO at hotel</li> </ul>  |     |                |
|   | <ul style="list-style-type: none"> <li>facilitate any reasonable request for communication, such as a phone call or email and including if necessary, organising a translator to explain the reasons for detention (call Victorian Interpretation and translation service on 9280 1955. PIN code is REDAC)</li> </ul>  | Yes | Section 200(5) |
|  | <ul style="list-style-type: none"> <li>provide a fact sheet about detention (what a person in detention can and can't do, who to contact for further information)</li> </ul>   |     |                |
|  | <ul style="list-style-type: none"> <li>record any actions taken in writing, including the above mandatory obligations, use of translator and any associated issues.</li> </ul>   |     |                |
|  | <ul style="list-style-type: none"> <li>use the list of arriving passengers to check off the provision of information to each arrival.</li> <li>This will help ensure all arrivals have been provided the information in the Direction and Detention Notice.</li> </ul>   |     |                |

\* DHHS Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order

<sup>1</sup> The Business system referred to here is the Quarantine and Welfare System COVID-19 Compliance Application

## Supplementary roles

Transport is the responsibility of [the Department of Transport] and should be managed in accordance with physical distancing and hygiene guidelines.

## Other airport issues

### People who are unwell at the airport

The lead for this situation is the Human Biosecurity Officer on behalf of the Deputy Chief Health Officer (Communicable Disease).

Any person who is unwell at the airport will be assessed by a departmental staff member and biosecurity officer at the airport.

After discussion with the human biosecurity officer, if it is determined that the person meets the criteria as a suspected case, the following actions should take place:

- The human biosecurity officer should organise an ambulance transfer to the Royal Melbourne Hospital or Royal Children's Hospital for testing and assessment
- The department AO at the airport should
  - log the person as requiring mandatory quarantine at a specified hotel and issue the detention notice
  - , provide a permission to enable the person to be transported to the hospital and, following medical release, be transported back to the hotel
  - Provide an information sheet to travel with the person to provide to the hospital advising it that the person is being detained and with a phone number for the hospital to call when the person is ready to be returned. so the hotel team leader can arrange a transfer (patient transfer/ambulance/ maxi taxi etc) to return to the hotel
- If the person is unwell and requires admission, they should be admitted and the AO lead informed
- If the person is well enough to be discharged they should return to the hotel \ and be placed in a COVID-19 floor if positive, or in a general part of the hotel if tested negative for COVID-19. The AO must ensure the room number is included on the detention notice.

### Transfer of uncooperative person to be detained to secure accommodation

It is recommended that a separate mode of transport is provided to a person who is to be detained who is uncooperative to a hotel or other location for the 14-day isolation. Contact Compliance Lead to discuss the situation with EOC.

Ensure appropriate safety measures are taken including child locks of doors and safety briefing for drivers etc.

# At the hotel

## Key points

- AO reiterates detention requirements and the penalties that apply for non-compliance.
- AO oversees and provides advice on compliance and works with security, hotel staff, other staff and medical staff.

## Key responsibilities at check-in

At hotel check-in:

- Person to be detained provides Direction and Detention Notice to hotel staff; hotel staff to write on the notice:
  - room number
  - the date that the person will be detained until (14 days after arrival at place of detention).
- Person to be detained provides completed Direction and Detention Notice to AO to confirm that the following details on the notice are correct:
  - the hotel name;
  - hotel room number and arrival date, time and room on notice;
  - the date that the person will be detained until (14 days after arrival at place of detention).
- AO reiterates detention requirements and ensure room number is documented on the notice. The notice must be returned to the detainee.
- The AO at the hotel must ensure the room details are recorded in the COVID-19 Compliance Application along with other information not captured at the airport.
- Following any medical and welfare check of the person, AO to liaise with nurses to identify persons that might require permissions for temporary leave (e.g. for medical treatments).

Persons being detained will be sent to their allocated room and informed that a person will contact them in the afternoon or next day

AOs to make themselves known to on-site security.

## Possible changes to hotel-check in process

As of 14 April 2020, DHHS is exploring using data entry staff at each hotel to input scanned copies of the direction and detention notice and data into the Compliance Application. This would mean that the AO at the hotel is primarily responsible for compliance related issues and associated notes.

## Monitoring compliance related issues at the hotel

- AOs should check that security are doing some floor walks to encourage compliance and deter non-compliance.
- AO will oversee and provide advice on compliance-related issues such as requests for temporary leave (see Temporary leave from the place of detention process), a person refusing to comply and a person demanding to be removed from detention. AOs may be called upon by security, hotel staff, or nursing staff to remind a person the reason for the detention and the penalties if they do not comply. There may be a need, in consultation with a nurse or medical practitioner, to refer a person for a welfare check or further assistance. Help of this nature may support compliance and a person's wellbeing. **This information must be captured on the COVID-19 Compliance Application.**

- AOs may need to answer questions from hotel staff, security and police as to what persons may be permitted or not permitted to do.
- AOs must facilitate any reasonable requests for communication. For translation, call Victorian Interpretation and translation service on 9280 1955. PIN code is **REDACTED**
- AOs are to make notes of compliance related issues and actions. The means of recording notes are dependent of the availability and use of technology and could include the Compliance Application, written contemporaneous notes in a notebook or other electronic records.
- AO must provide a handover (verbal and high-level information) to the incoming AO to get an update of any problems or special arrangements. For example, some people are permitted to attend cancer therapy at Peter Mac etc. This information should be also uploaded as high-level notes in the COVID 19 Compliance Application.

## Non-compliance matters outside scope of Authorised Officer

- AOs should be aware that their role and scope is related to administration of, and compliance with, the direction and detention notice under the PHWA. Being aware of other non-compliance related issues in a hotel may be helpful, however they are outside the scope. Non-compliance related issues may include food quality, organising transport, removing items from care packs such as perishables and alcohol and ordering food such as Uber eats.
- AOs may request DHHS concierge staff escalate non-compliance related issues.

## The AO Operations Lead to undertake review each day

- The AO Operations Lead will – at least once every 24 hours – review whether the continued detention of the person is reasonably necessary to protect public health [s. 200(6)] (**mandatory AO obligation**)
- The AO Operations Lead will undertake an electronic review of detainment arrangements by viewing COVID-19 Compliance Application. This includes reviewing:
  - the date and time of the previous review (to ensure it occurs at least once every 24 hours)
  - number of detainees present at the hotel
  - duration each detainee has been in detention for, to ensure that the 14-day detention period is adhered to
  - being cleared of COVID-19 results while in detention
  - determining whether continued detention of each detainee is reasonably necessary to eliminate or reduce a serious risk to health
  - consideration of the human rights being impacted – refer to ‘Charter of Human Rights’ obligations
  - any other issues that have arisen.
- The AO Operations Lead must prepare a brief for the Minister for Health on the review for endorsement by the Compliance executive lead and approval by the Chief Health Officer prior to submitting to the Minister for Health.

To inform the review, the Compliance Lead should:

- consider that the person is a returned overseas traveller who is subject to a notice and that they are obliged to comply with detainment
- consider that detainment is based on expert medical advice that overseas travellers are of an increased risk of COVID-19 and form most COVID-19 cases in Victoria
- note the date of entry in Australia and when the notice was given
- consider any other relevant compliance and welfare issues the AO becomes aware of, such as:
  - person’s health and wellbeing
  - any breaches of self-isolation requirement
  - issues raised during welfare checks (risk of self-harm, mental health issues)
  - actions taken to address issues

- being cleared of COVID-19 results while in detention
- any other material risks to the person
- record the outcomes of their review (high level notes) for each detained person (for each 24-hour period) in the **COVID-19 Compliance Application**. This allows ongoing assessment of each detainee and consideration of their entire detention history

To ascertain any medical, health or welfare issues, the Compliance Lead may need to liaise with on-site nurses and welfare staff and specialist areas within the department.

### **Mandatory reporting (mandatory AO obligation)**

As part of the review the AO Operations Lead must prepare a brief for the Minister for Health on the review for endorsement by the Compliance Executive Lead and approval by the Chief Health Officer (or their delegate) prior to submitting to the Minister for Health. The brief will serve as a written notice that:

:

- a person has been made subject to detention
- following a review, whether continued detention is reasonably necessary to eliminate or reduce the serious risk to public health.

The notice to the CHO must include:

- the name of the person being detained
- statement as to the reason why the person is being, or continues to be, subject to detention.

To streamline, the reporting process will involve a daily briefing to the CHO of new persons subject to detention and a database of persons subject to detention. The database will specify whether detention is being continued and the basis for this decision.

The CHO is required to advise the Minister for Health of any notice [s. 200(9)].

### **Possible release from detention based on review**

The daily review by the AO operations lead could identify that detention may no longer be required (with the approval of the Compliance Executive Lead and Public Health Commander). These matters will be referred to the Permissions and Exemptions team within the Covid Compliance cell to facilitate Public Health Command review and decision.

# Grant of leave from detention

## Key points

- AOs must be aware of how requests for exemption from quarantine are escalated.
- AO can make decisions on temporary leave for simple requests such as exercise.
- AO must complete Permission for Temporary Leave from detention form / enter in COVID-19 compliance Application and the Permissions Register must be filled in.

## Considerations

### Temporary leave from the place of detention (Detention notice)

Any arrangements for approved leave would need to meet public health (and human rights) requirements. It will be important that the AO balances the needs of the person and public health risk.

For example, if the person needs immediate medical care, public health risks need to be managed appropriately, but the expectation is that the leave would automatically be granted. This would be more nuanced and complex when the request is made on compassionate grounds where there is a question about how public health risks might be managed. However, again, human rights under the Charter need to be considered closely.

For temporary leave, AOs are NOT required to escort people from and to their place of detention. Taxis should be organised for transport to and from their leave (unless an ambulance is required).

AO should refer to the '*Permission for Temporary Leave from Detention*' guide at **Appendix 2**.

There are four circumstances under the Direction and Detention Notice in which permission to leave the room may be granted:

1. For the purpose of attending a medical facility to receive medical care
2. Where it is reasonably necessary for physical or mental health
3. On compassionate grounds
4. Emergency situations

## COVID-19 Escalation procedure for requests for leave from people in quarantine

### Persons emailing [covidquarantine@dhhs.vic.gov.au](mailto:covidquarantine@dhhs.vic.gov.au)

People in detention should email their request, with as much detail as possible, to [COVIDdirections@dhhs.vic.gov.au](mailto:COVIDdirections@dhhs.vic.gov.au)

- If the request relates to a person in a quarantine hotel seeking an exemption to complete their quarantine elsewhere or to be allowed temporary leave from detention (e.g. in order to go to hospital or to leave their room for a fresh air break), COVIDdirections staff will immediately forward the request on to the COVIDQUARANTINE email address.
  - NB All requests from people in quarantine that do not relate specifically to requesting an exemption or permission from quarantine as per the above will be dealt with by COVIDdirections staff.
- Staff on the COVIDQUARANTINE email will forward any permissioning requests to the AO rostered on at the hotel. The AO should do an initial assessment of whether they are able to deal with the matter themselves or that the request requires more information (e.g. from nurses / EM staff) and escalation to be considered.

- If it is a basic request covered by the detention and direction notice (i.e. needing to go to hospital, wanting a fresh air break) the AO can make the decision and action accordingly. Where the decision requires transportation of the person, the AO is to inform the onsite Team Leader that transport will be required.
- More complex permissioning may require escalation to the relevant AO team leader and then the AO operations Lead
- Any matter related to changing the place of detention or early release will be managed through the Permissions and exemptions team for approval through the CHO/DCHO. Each matter is to be considered on a case by case basis. However, a number of circumstances have been identified as likely to warrant consideration of early release or change of detention location. These are:
  - Unaccompanied minors in transit to another state;
  - Unaccompanied minors where a parent or guardian does not agree to come into the hotel;
  - Foreign diplomats coming into the country;
  - ADF staff travelling for essential work;
  - People with a terminal illness;
  - People whose health and welfare cannot be accommodated in a hotel environment (e.g. mental health or require in-facility health treatment);
  - People who are transiting directly to another country (and who do not need to travel domestically first);
  - Air crew;
  - Maritime workers who have come off a boat and will be leaving by boat;
  - Maritime workers who have come off a plane and will be leaving by boat within the quarantine period .
- Once a decision is received from the CHO/DCHO, they inform COVIDQUARANTINE who informs EOC and the AO Compliance Lead who delegates implementation of the decision

### **Recommendation for leave by on-site nurse, medical practitioner of welfare staff**

Where the request for an exemption comes from or is recommended by the onsite nurses or EM welfare staff:

- The person recommending the exemption contacts the AO and outlines why they believe an exemption should be considered.
  - The default position is that the person on whose behalf the request has been suggested should be consulted about the request but there may be times where this is not appropriate.
- Remainder of process as per third dot point under “Persons emailing covidquarantine@dhhs.vic.gov.au’ above.

### **Urgent medical attention**

- If medical care is deemed urgent by an on-site nurse or medical practitioner, the AO should prioritise and approve leave immediately.
- Please see Hospital Transfer Plan.

### **Other requests**

- Requests are also sometimes received from external sources such as Members of Parliament. These should be sent to COVIDQUARANTINE and triaged as per the above guidance. The Compliance Executive leave should be immediately advised is an exemption is being sought through an MP.

### **Physical health (exercise) – see procedure at end of this chapter**

- AO will consider the circumstances on a case-by-case basis to determine if permission is granted. Considerations include:

- willingness and availability of security to facilitate exercise
- site layout and capability to ensure persons are in a cordoned off area
- maintaining infection control.
- AO may wish to seek advice from Compliance Lead for advice.
- AO to make decision and action accordingly.

## Recording leave

If AO or Compliance Lead approves leave be granted, the AO:

- must complete a Permission for Temporary Leave from detention form for the person, **Appendix 1** and Register of leave form, **Appendix 10**, and
- enter in Compliance Application if available.

## Emergency situations

- Department AOs and Victoria Police officers may need to determine the severity of any emergency (such as a building fire, flood, natural disaster etc) and the health risk they pose to persons in detention.
- If deemed that numerous persons in detention need to leave the premises due to an emergency, a common assembly point external to the premises should be utilised; persons in detention should be accompanied at all times by a department authorised officer or a Victoria Police officer, and infection prevention and control and social distancing principles should be adhered to
- The accompanying departmental AO or a Victoria Police officer should ensure that all relevant persons in detention are present at the assembly point by way of a register of persons in detention.
- AO's should make notes.

## Procedure for a person in detention / resident to leave their room for exercise or smoking

Request for temporary leave will be considered in the context of what other activities are being undertaken (arrivals/departures and staffing considerations) and may not always be able to be accommodated. This may be site and capacity dependant.

A person must be compliant and must not have symptoms before they could be allowed to have supervised exercise or a smoking break. Only well residents from the same room should be able to go out to exercise at the same time.

## Role of AO

AO should:

- confirm security is prepared and available to facilitate exercise or smoking break
- instruct security on the dates and time permitted for leave
- provide procedural guidance to security and the person in detention, such as exercising in a cordoned off area not access by members of the public
- seek feedback on implementation of temporary leave and note any issues raised
- confirm appropriate infection control measures are in place
- advise on physical distancing requirements.

## Guidance for person in detention

The steps that must be taken by the person in detention are:

- Confirm to the person who will escort them that they are well.

- Confirm to the person who will escort them that they have washed their hands immediately prior to leaving the room.
- Don a single-use facemask (surgical mask), to be supplied by the security escort prior to leaving the room.
- Perform hand hygiene with alcohol-based handrub as they leave, this will require hand rub to be in the corridor in multiple locations.
- Be reminded to – and then not touch any surfaces or people within the hotel on the way out, and then not actually do it.
- They return immediately to their hotel room.

### **Guidance for security escort**

Security escort should:

- Don a single-use facemask (surgical mask) if a distance of >1.5 metres cannot be maintained when escorting the person;
- Perform hand hygiene with an alcohol-based handrub or wash hands in soapy water;
- Remind the person they are escorting to not touch any surfaces or people within the hotel on the way out or when coming back in
- Be the person who touches all surfaces if required such as the lift button or door handles (where possible using security passes and elbows rather than hands);
- Wherever possible, maintain a distance (1.5 metres) from the person;
- Perform hand hygiene with an alcohol-based handrub or wash hands in soapy water at the end of each break and when they go home
- Exercise should be undertaken in a cordoned off area with no public access or interaction.

### **Other considerations**

Points to remember when using a single-use facemask (surgical mask):

- Always perform hand hygiene before donning the mask.
- Mould the metal clip over the bridge of the nose and ensure the bottom of the mask fits snugly under the chin.
- Avoid touching or adjusting the mask once it has been donned.
- Unless damp or soiled, masks may be worn for the duration of a shift for up to four hours.
- Masks must be removed and disposed of for breaks and then replaced if needed.
- Masks must never be partially removed (for example, top tie undone and left dangling around the neck) and then re-worn.
- Perform hand hygiene immediately before and after removal of the mask.

There is no requirement to wear gloves and this is not recommended, as many people forget to take them off and then contaminate surfaces. Hand hygiene is one of the most effective ways to prevent the spread of infection and gloves should not be seen as a substitute for hand hygiene. If gloves are worn, remove the gloves immediately after the person is back in their room and then wash your hands.

#### **In addition:**

- Family groups may be taken out in a group provided it is only 2 adults and less than 5 in total.
- They can be taken to an outside area with sunlight, for up to 15 minutes outside of the hotel.
- Smokers can take up to 2 breaks per day if staffing permits.
- Rostering to be initiated by the departmental staff/AO present.

## Supporting smokers to quit smoking

The preferred option is support smokers to quit or manage withdrawal while confined to their hotel room. This would mean that smokers be supported to manage cravings while they are unable to smoke but would not be forced to quit.

Further work to support to support this approach would include provision of approved nicotine replacement therapies (NRT) with meal deliveries, accompanied by counselling through the Quitline. DHHS to explore opportunities to incorporate provision of NRT and counselling.

DRAFT

## Hospital transfer plan

The following outlines the role of the AO in hospital transfers

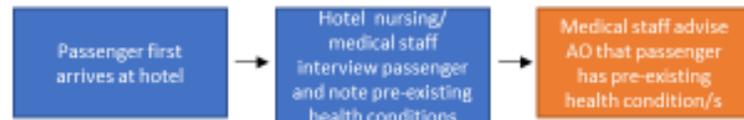

- Nurse/doctor assess that patient requires hospital care
- **There is also a one pager to explain to AO how to grant permission at Appendix 2 Permission to temporarily leave. Leave should be recorded on the COVID-19 Compliance Application or register. The detainee should also be provided with an information sheet to be provided to the hospital to quarantine and contact arrangements.**
- **All relevant staff including AO must be notified prior to the transfer.**
- Patient is transferred to the appropriate hospital. Patients requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
- If the hospital transfer is urgent call 000 to request ambulance and inform them that the passenger is a suspected (or confirmed) case of COVID-19. This takes priority over any AO requirements.
- Prior to any movement of the patient out of the ED a new plan or detention approval must be sought for either return or admission to different location in consultation with compliance team (receiving hospital and compliance team).
- 

The flow diagrams below outline the processes, including interactions with AO for the transfer and return of a patient.

DHHS is endeavouring to organise patient transport arrangements.

# Process to transfer passengers to hospital (planned)

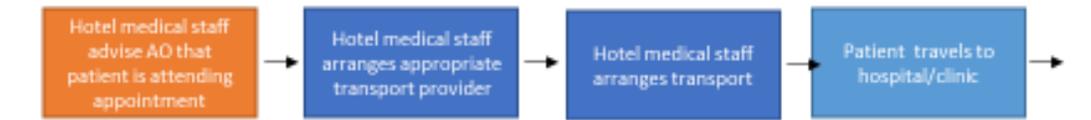

## WHEN PASSENGER ARRIVES AT HOTEL

Medical staff note requirements for passenger to attend specialist appointments at hospital/clinic, including details of doctor, location and frequency. This information is provided to the AO

## WHEN PATIENT NEEDS TO ATTEND SPECIALIST APPOINTMENT

AO provides medical sheet that stays with patient throughout journey

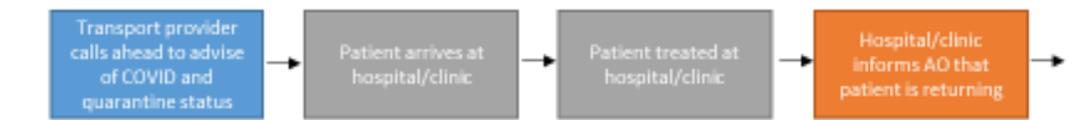

Based on medical need. Options incl.:

- AV
- NEPT
- CTS

Medical staff advises:

- COVID status
- Compulsory quarantine

Transport provider considers PPE requirements

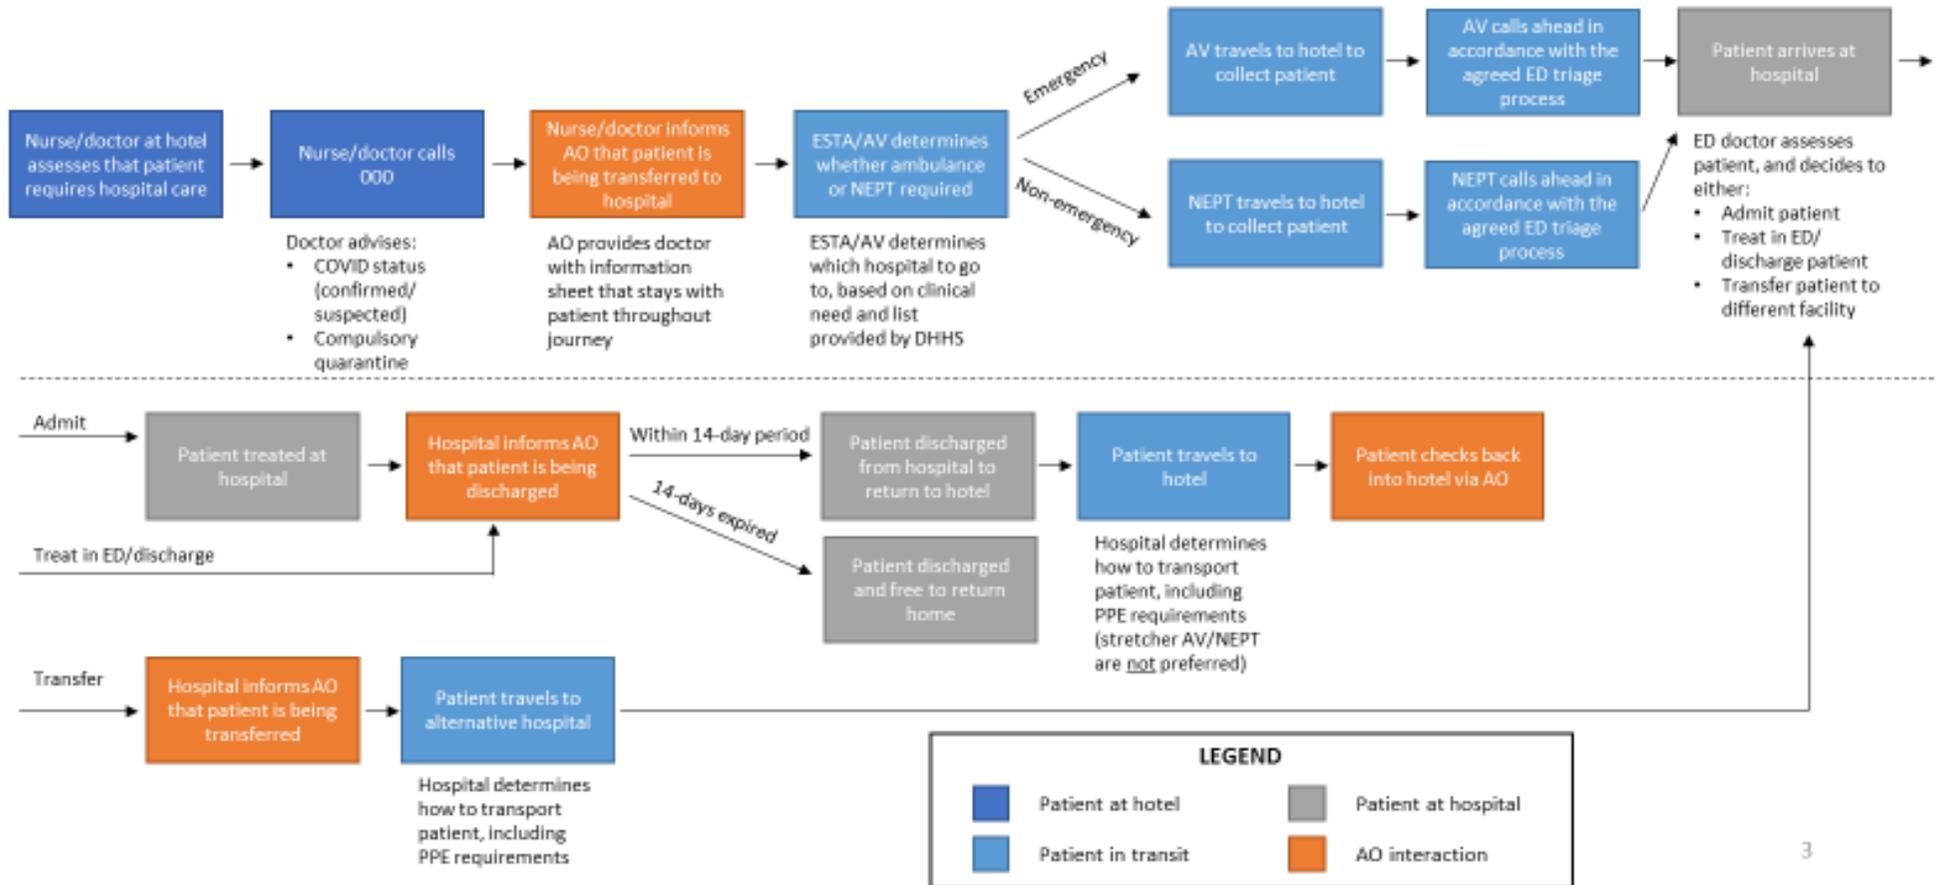

Based on medical need. Options incl.:

- AV
- NEPT
- CTS

Transport provider considers PPE requirements

# Process to transfer passengers to hospital (unplanned)

# Compliance

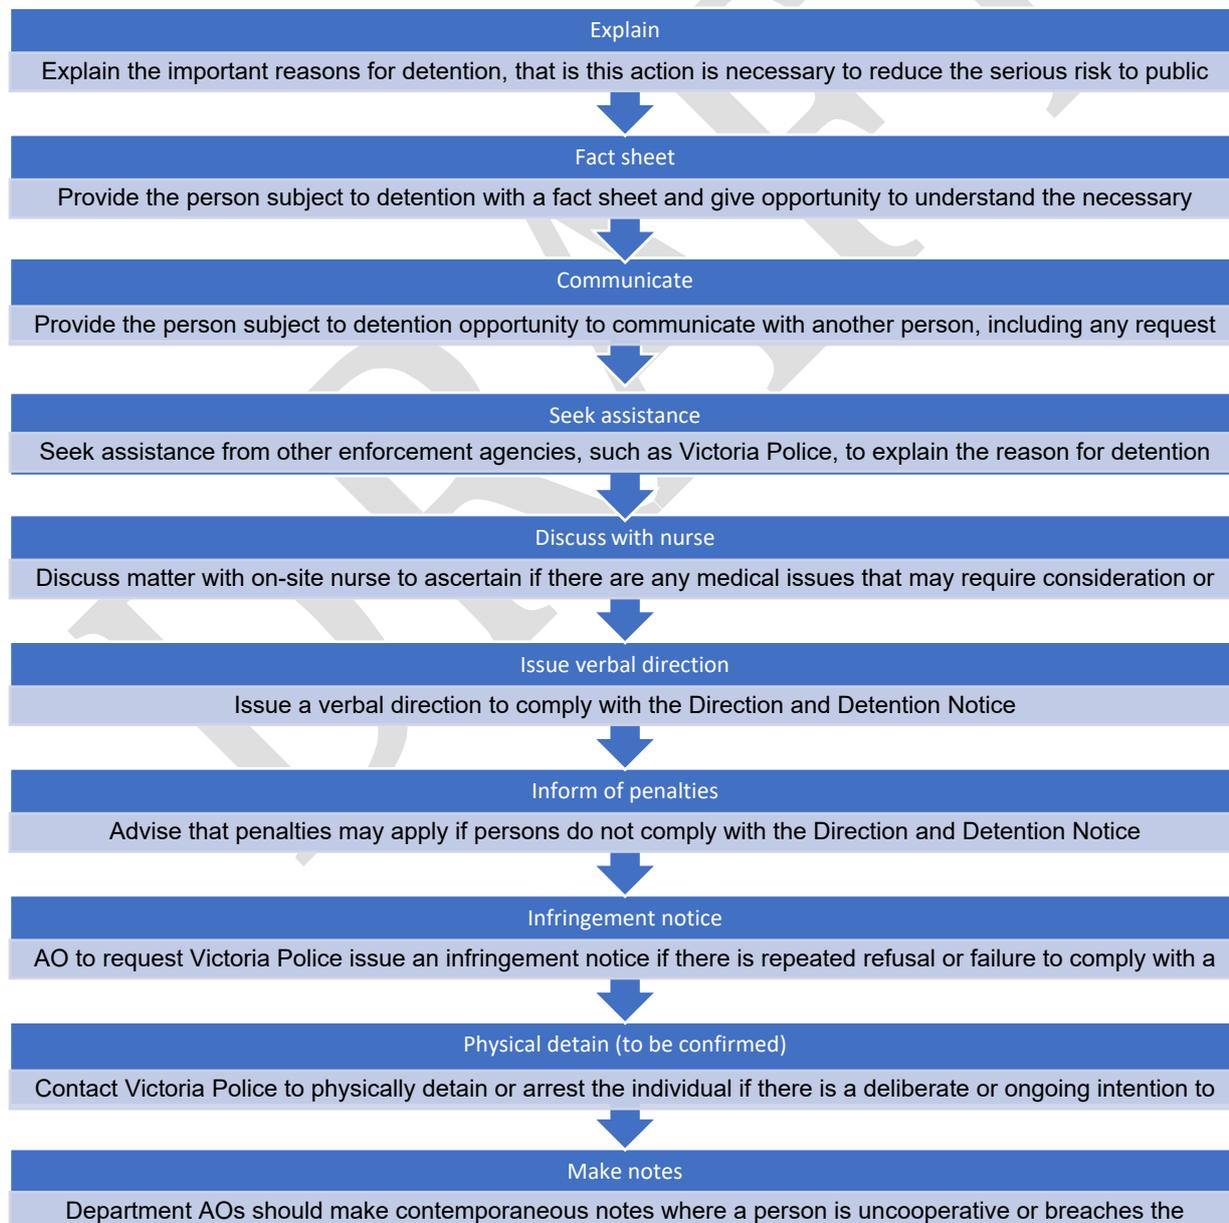

## Key Point

- The role of an AO in compliance is only to exercise the powers under section 199 of the PHWA. **We are seeking advice on arrests, including moving people into a 'forced' detention or physical contact with a person must be managed by Victoria Police.**

## Options to facilitate compliance

Department AOs should make every effort to inform the person of their obligations, facilitate communication if requested and explain the important rationale for the direction. Non-compliance could take the form of a person refusing to comply with the direction at the airport or hotel.

The following graduated approach should guide AOs:

## Unauthorised departure from accommodation

If there is reason to believe a person subject to detention is not complying with the direction and detention notice, the AO should:

- notify on-site security and hotel management
- organise a search of the facility
- consider seeking police assistance
- notify the compliance lead if the person subject to detention is not found

If the person is located, the AO should:

- seek security or Victoria Police assistance if it is determined the person poses a risk of trying to leave
- provide an opportunity for the person to explain the reason why they left their room
- assess the nature and extent of the breach, for example:
  - a walk to obtain fresh air
  - a deliberate intention to leave the hotel
  - mental health issues
  - escaping emotional or physical violence
- consider issuing an official warning or infringement through Victoria Police
- reassess security arrangements
- report the matter to the Director, Regulation Reform.

Departmental AOs should make contemporaneous notes where a person is uncooperative or breaches a direction.

## Infringements

On 28 March 2020, the Public Health and Wellbeing Regulations 2019 were amended to create four new infringement offences. These are:

**Table 1 List of infringements**

| Section (PHWA) | Description  | Amount                                     |
|----------------|--|--|
| s.183          | Hinder or obstruct an authorised officer exercising a power without reasonable excuse (5 penalty units).   | 5 penalty units (PU)                       |
| s.188(2)       | Refuse or fail to comply with a direction by CHO to provide information made under s.188(10) without a reasonable excuse.  | 10 PU natural person, 30 PU body corporate |
| s.193(1)       | Refuse or fail to comply with a direction given to, or a requirement made or, a person in the exercise of a public health risk powers (10 penalty units for natural person and 60 penalty units for body corporate). | 10 PU natural person, 30 PU body corporate |
| s.203(1)       | Refuse or fail to comply with a direction given to, or a requirement made or, a person in the exercise of a public health risk powers (10 penalty units for natural person and 60 penalty units for body corporate). | 10 PU natural person, 30 PU body corporate |

# Policy and procedure on unaccompanied minors

## Key points

- unaccompanied minors will be dealt with on a case by case basis.
- If an unaccompanied minor is detained in a hotel without parents, specific processes must apply.

Instances where an unaccompanied minor is captured by a detention order must be managed on a case by case basis.

In general, there is a presumption that there are no exemptions granted to mandatory quarantine. The issues in relation to mandatory quarantine of unaccompanied minors include: where this occurs, and with what adult supervision.

Preliminary legal advice is that the State could issue a detention order to a person under 18 years who is unaccompanied outside the home (a person in the care of the state) if certain conditions are met. These must include:

- AO has to check in regularly
- Person can easily contact parent / guardian
- Has adequate food
- Remote education is facilitated.

A detention notice for minors to undertake detention outside of a hotel will be supplied in this protocol shortly.

***There is guidance for AOs on how to comply with the Charter of Human Rights in relation to unaccompanied minors at Appendix 4.***

## When an unaccompanied minor normally resides outside Victoria

It is proposed that where there is no clear alternative, an unaccompanied minor who normally resides outside of Victoria may be facilitated to undertake detention in their normal home state of residence, with appropriate risk management of any possible exposures to others on a domestic flight out of Victoria to that state. The department will need to be satisfied that the receiving state will take the person under 18 years and manage public health risks.

## When an unaccompanied minor is normally resident in Victoria

It is proposed that an adult (who is not themselves a returned overseas traveller) who supervises a minor should join that minor at a place of detention. If that occurs, the adult should then remain with that person in quarantine although there is no legislative power to issue a direction to that adult to detain the adult.

If an unaccompanied minor who normally resides in Victoria is unable to be joined by a parent / guardian (for example because that parent / guardian has other caring duties and cannot thus join the minor in detention) then on a case by case basis, an assessment will be undertaken to identify whether detention is to be served in the home.

An alternative arrangement (i.e. parents join them in quarantine or quarantine at home) to self detention is to be considered for an unaccompanied minor. Please also see **Appendix 3**.

**If a child is quarantined at home with their parents, a detention notice should still be provided to the child and parents outlining the same requirements for children as if they were in quarantine in**

a hotel, together with the guidance about advice to close contacts in quarantine. Legal services will adapt notices for that purpose.

AOs monitoring unaccompanied minors should have current Working with Children Checks and understand their reporting requirements under the Reportable Conduct Scheme.

## When a minor is detained at their home

If it is determined to be appropriate to detain a child at home after a risk assessment, the arrangement will involve:

- Issuing a detention order naming the specific home and / or parts of the home, and
- The detention order will be accompanied by advice on minimising risk of transmission to others in the home where the minor is detained (equivalent to advice to close contacts in quarantine); and
- An Authorised Officer will undertake a process to undertake a review each day in the manner required by the Act.

## When an unaccompanied minor is detained in a hotel

If an unaccompanied minor is detained in a hotel without parents, a specific notice and process is below.

- A Detention Notice – Solo Children, is found at **Appendix 5**.
- A guideline for authorised officers in this respect is found at **Appendix 4**.

This is a more intensive process for the authorised officers, which is commensurate with the additional risk of quarantining a child because the child is subject to the care of the Chief Health Officer and the department.

## Escalation of issues

Should an AO become aware of any concern about a child, the AO must:

- contact the department's welfare teams immediately. Child Protection contact details for each Division: <https://services.dhhs.vic.gov.au/child-protection-contacts>. West Division Intake covers the City of Melbourne LGA: 1300 664 977.
- contact after hours child protection team on 13 12 78 if an AO thinks a child may be harmed and Victoria Police on 000 if the immediate safety of a child is at risk.

# Departure – release from mandatory detention

## Key points

- AOs are responsible for the compliance check out.

## Background

Prior to release of a person being detained, they will be provided with an End of Detention Notice, **Appendix 8** or an End of Detention Notice (confirmed case or respiratory illness symptoms), **Appendix 9** that confirms release details and specifies requirements to follow. Detention is 14 days from the date of arrival and ends at 12am on the last day. No-one will be kept past their end of detention.

## Pre check-out

- Exit Notices and associated materials prepared and dropped to hotel.
- Early hours releases transport booked (DJPR).
- Early hours releases documentation actioned by AO evening prior.
- Notices for all persons subject to detention placed under doors (by Security).

The person in detention will be:

- notified they are due for release from detention in 48 hours
- notified that a health check to determine their status is recommended
- provided information for people exiting quarantine on transport and other logistical matters.

## Health check

- The health checks on the second last day prior to the 14-day period ending must be used to make an assessment of whether the person is well, symptomatic or positive.
- Everyone will be offered a voluntary temperature and symptom check by a nurse around 24 hours before release.
- If people being detained have a temperature or other symptoms of coronavirus before leaving or at the health check, this will not affect the completion of their detention. They will not be detained for longer than the 14-day quarantine period, even if they have symptoms consistent with coronavirus. However, if they do have symptoms at the health check, when they are released, they will need to seek medical care and self-isolate as appropriate, as do all members of the community.

## Day of release

- Security door knocks early departures and they can leave
- Security door knocks exiting detainees at agreed time and brings people to exit location.

## Checkout process

- The release process will consist of an organised check out procedure (the compliance check out). This will mean people being detained will be released in stages throughout a set time period on the day of release. Travelling parties will be brought down to reception in stages to complete the check out process. People being detained will also need to settle any monies owing to the hotel for additional meals and drinks if they have not already done so. Physical distancing must be maintained throughout this process.
- At check-out, the AO will:
  - request to see identification and the End of Detention notice
  - confirm the person's identification and room number on exit sheet

- confirm the period of detention and explain detention period has ceased, including highlighting other requirements
- site and sign the End of Detention notice and provide to the person
- mark the person off an exit list as being discharged and request that they sign the list confirming discharge
- provide cab charge
- update the Compliance Application (note this may be a data entry update after the process has been completed).

DRAFT

# Occupational health and safety (OHS) for Authorised Officers

## Key points

- OHS is a shared responsibility of both the employer and the employee. AOs must raise hazards, concerns and incidents.
- AOs must take steps to protect themselves from transmission of covid-19 and adhere to physical distancing protocols wherever possible

## Purpose

The purpose of this section is to provide an occupational health and safety procedure for department AOs when attending off site locations during the current State of Emergency.

## Health Emergency

Coronaviruses are a large family of viruses that cause respiratory infections. These can range from the common cold to more serious diseases. COVID-19 is the disease caused by a new coronavirus. It was first reported in December 2019 in Wuhan City in China.

Symptoms of COVID-19 can range from mild illness to pneumonia. Some people will recover easily, and others may get very sick very quickly which in some cases can cause death.

## Compliance Activity

On 16 March 2020 a State of Emergency was declared in Victoria to combat COVID-19 and to provide the Chief Health Officer with the powers he needs to eliminate or reduce a serious risk to the public.

Under a State of Emergency, Authorised Officers, at the direction of the Chief Health Officer, can act to eliminate or reduce a serious risk to public health by detaining people, restricting movement, preventing entry to premises, or providing any other direction an officer considers reasonable to protect public health.

Using a roster-based system, AOs will be placed on call to exercise authorised powers pursuant to section 199 of the PHWA. **AOs compliance role is only to exercise the powers under section 199 of the Act, any arrests, including moving people into detainment or physical contact a person must be managed by Victoria Police.**

## OHS

OHS is a shared responsibility of both the employer and the employee. Officers must raise hazards, concerns and incidents with **REDACTED**

One of the foremost issues associated with site attendance is the 'uncontrolled environment' that exists. AOs can be exposed to infectious diseases (such as COVID-19), confrontational and/or aggressive members of the public who may be drug affected, mentally ill or intellectually impaired. The very nature of this work is likely to be perceived as invasive and can provoke a defensive response.

Risks can be minimised by maintaining routine safe work practices and proper planning. Prior to any site visit, risks and hazards should be identified and assessed.

Officers and managers both have a shared responsibility for occupational health and safety. All employees have a responsibility to report and discuss hazards or perceived hazards, by bringing this to the managers attention.

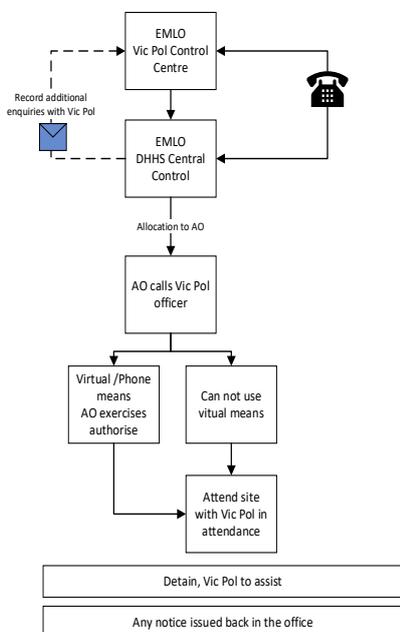

## Fatigue

AOs will be rostered on a rotating basis, with the aim of mitigating the risk of fatigue. Fatigue may impede decision making capability and when driving a motor vehicle to a location. When fatigue is identified please make this known to your manager.

To mitigate the risk of fatigue, AOs should be aware of any fatigue they may have. A good tool to use to help officers identify their level of fatigue is to use the following calculator:

<http://www.vgate.net.au/fatigue.php>

AOs are required to hold a valid motor vehicle licence and are required to adhere to the requirements of the department's driving policy. Information about this policy can be found on the DHHS intranet site.

## Risk assessment before attendance | Personal Protection

Officers must only take a direction to attend a site with the approval of the Central DHHS Emergency Management Liaison Officer or DHHS management.

In the first instance, officers are required to use technology (i.e: mobile phone, Facetime, Skype) to exercise their authority. This aims to protect officers from attending an uncontrolled environment, where the risk of harm is increased.

Before attending a site, whether an airport or a hotel, the officer should make themselves familiar with the recommendations produced by the Australian Government and the Department of Health and Human Services, in the protection against COVID-19.

Interventions are known as 'transmission reduction, or 'physical distancing' measures. Officers can take the following personal measure to reduce their risk of exposure to COVID-19. Officers with pre-existing medical conditions that put them more at risk of COVID-19, should discuss this with their medical practitioner and manager.

## Personal measures to reduce risk the risk of exposure to COVID

AO must take steps to protect themselves from transmission of covid-19 and adhere to physical distancing protocols wherever possible. Example include:

- Stay healthy with good nutrition, regular exercise, sensible drinking, sleeping well, and if you are a smoker, quitting.
- Wash your hands often with soap and water for at least 20 seconds, especially after you have been in a public place, or after blowing your nose, coughing, sneezing, or using the toilet. If soap and water are not readily available, use a hand sanitiser that contains at least 60 per cent alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Cover your nose and mouth with a tissue when you cough or sneeze. If you don't have a tissue, cough or sneeze into your upper sleeve or elbow.
- Stop shaking hands, hugging or kissing as a greeting.
- Ensure a **distance of 1.5 metres** is kept between yourself and others.
- Get vaccinated for flu (influenza) as soon as available. This could help reduce the risk of further problems. *Note: the department covers expenses for vaccines, speak to your manager for more details.*
- Clean and disinfect high touch surfaces regularly, for example: telephones, keyboards, door handles, light switches and, bench tops.

When an officer is called to attend the airport or a hotel to exercise powers in relation to the Direction and Detention notice they should take a **risk-based approach** and assess the most suitable way to reduce harm to themselves. Before attending, the officer must obtain information such as:

- Is the person being detained a positive case of COVID-19?
- Has the person being detained been recently in close contact with a positive case of COVID-19?
- Has the person being detained recently returned from overseas within the last 14 days?

Officers are required to use their discretion and take into account their own personal safety. The Department of Health and Human Services has provided the following PPE:

- Single-use surgical mask
- Gloves
- Hand Sanitizer.

### AOs going onto floor of hotel

AOs going onto hotel the floors with persons subject to detention must wear masks. There should be P2/N95 respirators/masks for AO's at the hotels (in addition to the surgical masks).

AO's should not enter the room in which a person is being detained. Communication should be from the corridor or outside the room.

### Relocating covid-19 positive person

- This process is lead by the nurses/medical staff, who are trained and prepared for it.
- The nurses and security staff are to go up to the patient's room and collect the patient in full PPE. Again, security are just there to ensure the nurses are safe.
- The AO will then go up in a SEPARATE lift in PPE and meet them on the new floor where the patient is going to be. From a safe distance (over 1.5 meters away, the AO is then to very briefly state that the patient was in room(x) and now has been moved to room(y) as a result of their positive result. The AO WILL THEN LEAVE IN A SEAPARATE LIFT TO THE SECURITY/NURSING STAFF.
- The Team Leader can assist in this process by facilitating the room change from an admin perspective and helping with coordinating the nursing staff etc.

### Measures and guides to enhance occupational health and safety

| PPE/measure                                     | Guide  |
|---|--|
| Single-use face mask (surgical mask)            | When there is known case of COVID-19, or a person subject to detention has been recently exposed to COVID-19 and a distance of at least 1.5 metres cannot be maintained. |
| Gloves  | If contact with the person or blood or body fluids is anticipated.   |
| Hand hygiene / Hand Sanitizer<br>Soap and water | Always   |
| Physical distancing of at least 1.5 meters      | Always   |

### Known risks and hazards

| Hazard                  | Risk                                 | Mitigate  |
|-------------------------|--------------------------------------|---|
| COVID-19 infection      | Serious illness / death              | Follow personal protective measures   |
| Fatigue                 | Impaired decisions / driving to site | In the first instance use virtual technology to perform duties<br><br>Use fatigue calculator<br><a href="http://www.vgate.net.au/fatigue.php">http://www.vgate.net.au/fatigue.php</a> |
| Physical Injury         | Low / Medium                         | Only attend a site with Victoria Police or with security.   |
| Other infectious agents |                                      | Follow personal protective measures   |

# Appendix 1 - Permission for temporary leave from detention

## PERMISSION FOR TEMPORARY LEAVE FROM DETENTION

Public Health and Wellbeing Act 2008 (Vic)

### Section 200

An Authorised Officer has granted you permission to leave your room based on one of the grounds set out below. This is temporary. You will be supervised when you leave your room. You must ensure you comply with all the conditions in this permission and any directions an Authorised Officer gives you. You must return to your room at the time specified to finish your detention. Speak to your supervising Authorised Officer if you require more information.

### Temporary leave

- (1) You have arrived in Victoria from overseas, on or after midnight [on 28 March 2020 or 13 April 2020] and have been placed in detention, pursuant to a Direction and Detention Notice that you were provided on your arrival in Victoria (**Notice**).
- (2) This Permission for Temporary Leave From Detention (**Permission**) is made under paragraph 4(1) of the Notice.

### Reason/s for, and terms of, permission granting temporary leave

- (3) Permission for temporary leave has been granted to: \_\_\_\_\_  
 \_\_\_\_\_ [insert name] for the following reason/s [tick applicable]:

- (a) for the purpose of attending a medical facility to receive medical care:

**Name of facility:** \_\_\_\_\_

**Time of admission/appointment:** \_\_\_\_\_

**Reason for medical appointment:** \_\_\_\_\_

- (b) where it is reasonably necessary for physical or mental health:

**Reason leave is necessary:** \_\_\_\_\_

**Proposed activity/solution:** \_\_\_\_\_

- (c) on compassionate grounds:

**Detail grounds:** \_\_\_\_\_

- (4) The temporary leave starts on \_\_\_\_\_  
 and ends on \_\_\_\_\_ [insert date and time].

\_\_\_\_\_ **Signature of Authorised Officer**

**Name of Authorised Officer:** \_\_\_\_\_

*As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.*

### Conditions

- (5) You must be supervised **at all times**/may be supervised *[delete as appropriate]* while you are out of your room. You are not permitted to leave your hotel room, even for the purpose contained in this Permission, unless you are accompanied by an Authorised Officer.
- (6) While you are outside your room you must practice social distancing, and as far as possible, maintain a distance of 1.5 metres from all other people, including the Authorised Officer escorting you.
- (7) When you are outside your room you must refrain from touching communal surfaces, as far as possible, such as door knobs, handrails, lift buttons etc.
- (8) When you are outside your room you must, at all times, wear appropriate protective equipment to prevent the spread of COVID-19, if directed by the Authorised Officer escorting you.
- (9) When you are outside your room you must, at all times, comply with any direction given to you by the Authorised Officer escorting you.
- (10) At the end of your temporary leave, you will be escorted back to your room by the Authorised Officer escorting you. You must return to your room and remain there to complete the requirements under the Notice.
- (11) Once you return to the hotel, you must proceed immediately to the room you have been allocated above in accordance with any instructions given to you.
- (12) You must comply with any other conditions or directions the Authorised Officer considers appropriate.

*(Insert additional conditions, if any, at Annexure 1)*

### **Specific details**

- (13) Temporary leave is only permitted in limited circumstances, to the extent provided for in this Permission, and is subject to the strict conditions outlined at paragraph 3. You must comply with these conditions at all times while you are on temporary leave. These conditions are reasonably necessary to protect public health, in accordance with section 200(1)(d) of the Public Health and Wellbeing Act 2008 (Vic).
- (14) Permission is only granted to the extent necessary to achieve the purpose of, and for the period of time noted at paragraph 2 of this Permission.
- (15) Nothing in this Permission, invalidates, revokes or varies the circumstances, or period, of your detention, as contained in the Notice. The Notice continues to be in force during the period for which you are granted permission for temporary leave from detention. The Notice continues to be in force until it expires.

### **Offences and penalties**

- (16) It is an offence under section 203 of the Act if you refuse or fail to comply with the conditions set out in this Permission, unless you have a reasonable excuse for refusing or failing to comply.
- (17) The current penalty for an individual is \$19,826.40.

## Appendix 2 Guidance Note: Permission for Temporary Leave from Detention

### How do you issue a Permission for Temporary Leave from Detention?

It is recommended that Authorised Officers take the following steps when issuing a Permission for Temporary Leave from Detention:

#### **Before you provide the Permission for Temporary Leave from Detention**

- carefully consider the request for permission and consider the grounds available under paragraph 4(1) of the Direction and Detention Notice – which include:
  - for the purposes of attending a medical facility to receive medical care; or
  - where it is reasonably necessary for your physical or mental health; or
  - on compassionate grounds.
- complete all sections of the Permission, including clearly documenting the reasons for the Permission, date and time when the temporary leave is granted from and to, and whether the person will be supervised by the authorised officer during the temporary leave
- ensure the reference number is completed.

#### **When you are provide the Permission for Temporary Leave from Detention**

- you must warn the person that refusal or failure to comply without reasonable excuse, is an offence;
- explain the reason why it is necessary to provide the Permission and the conditions which apply to the temporary leave (including that the person is still subject to completing the remainder of the detention once the temporary leave expires, and the Permission is necessary to protect public health);
- provide a copy of the Permission to the person, provide them with time to read the Permission and keep the completed original for the department's records.

**NB** If it is not practicable to explain the reason why it is necessary to give the Permission, please do so as soon as practicable after Permission has been exercised.

### What are the requirements when you are granting a permission to a person under the age of 18?

The same requirements set out above apply when issuing a Permission to an unaccompanied minor. However, the supervising Authorised Officer must have Working With Children Check, have regard to the special conditions in the Direction and Detention Notice as well as the person's status as a child.

### What other directions can you give?

Section 200(1)(d) of the PHWA sets out an emergency power that allows an authorised officer to give any other direction that the authorised officer considers is reasonably necessary to protect public health.

### What are your obligations when you require compliance with a direction?

Exercising this power imposes several obligations on departmental authorised officers including that an authorised officer must, before exercising any emergency powers, warn the person that refusal or failure to comply without reasonable excuse, is an offence.

# Appendix 3 Guidance: Exemptions under Commonwealth law

PLEASE NOTE THAT THIS IS SUBJECT TO VICTORIAN DIRECTIONS. PLEASE CHECK WITH COVID COMPLIANCE EXECUTIVE LEAD RE CURRENT POLICY

## Exemptions to the 14 day mandatory quarantine period for international travellers

The Australian Health Protection Principal Committee (AHPPC) recognise that there should be some exemptions from quarantine requirements for specific industry groups, provided they adhere to specified risk mitigations measures. These specific exemptions are recommended because of the industry infection prevention requirements, training these groups have undergone, and the vital role of these industries in Australia.

While these are national recommendations, mandatory quarantine is enforced under state and territory public health legislation. Individual states and territories may choose to implement additional requirements at the point of arrival.

Some jurisdictions may also have additional quarantine requirements upon entry to the state or territory. Depending on the jurisdiction, this could mean that an international traveller is required to go into mandatory quarantine at the first point of arrival into Australia, and further quarantine upon entry to another jurisdiction.

The following groups are recommended to be exempt from the 14 day mandatory quarantine requirements when entering Australia. While these groups are exempt from mandatory quarantine, all arrivals into Australia must continue to practise social distancing, cough etiquette and hand hygiene. Other requirements, such as self-isolation, may still apply and are outlined below.

### Aviation crew

#### International flight crew (Australian residents/citizens)

- Are not required to undertake 14 days of mandatory quarantine on arrival.
- Are not required to complete the Isolation Declaration Card.
- Are not required to self-isolate.

#### International flight crew (foreign nationals)

- Are not required to undertake 14 days of mandatory quarantine on arrival.
- Are not required to complete the Isolation Declaration Card.
- Must self-isolate in their hotel on arrival until their next flight.
- Must use privately organised transport to transfer to and from hotels between flights.
- May fly domestically to their next point of departure from Australia if required.

#### Domestic flight crew

- Exempt from self-isolation requirements *except when a state or territory specifically prohibits entry.*

### Maritime crew (excluding cruise ships)

- Are not required to undertake 14 days of mandatory quarantine on arrival into Australia. They are therefore not required to complete the Isolation Declaration Card.
- Must proceed directly to the vessel on arrival.

Exemptions to the 14 day mandatory quarantine period, version 2 (08/04/2020)  
Coronavirus Disease (COVID-19)

1

- If access to the vessel is not immediate, crew must self-isolate at their accommodation during any lay-over period.
- May travel domestically and/or take a domestic flight to meet their vessel at the next point of departure if required.
- At the completion of their shifts, they are not required to go into mandatory 14 days quarantine, but must undertake 14 days self-isolation.
- Time at sea counts towards the 14 days of self-isolation if no illness has been reported on-board. Therefore crew signing off commercial vessels that have spent greater than 14 days at sea, with no known illness on-board, do not need to self-isolate on arrival.

## Unaccompanied minors

Unaccompanied minors will be allowed to travel domestically after entering Australia to self-quarantine with a parent or guardian at their home.

## Transit passengers

- International transit passengers arriving into Australia are able to depart on another international flight if the following conditions are met:
  - If the individual has up to 8 hours until the departing international flight, they must remain at the airport and be permitted to onward travel, maintaining social distancing and hand hygiene.
  - If 8-72 hours before the departing flight, they must go to mandatory quarantine at the state designated facility until the time of the departing flight.
- No domestic onward travel is allowed, even if this is to meet a departing international flight. These people should go into mandatory quarantine at the state designated facility at the first point of arrival.

## Diplomats

- Australia has legal obligations under the Vienna Convention to ensure diplomats freedom of movement and travel, and protection from detention. Diplomats are not required to undertake 14 days of mandatory quarantine on arrival into Australia. They are therefore not required to complete the Isolation Declaration Card.
- Diplomats should self-isolate at their mission or in their usual place of residence on arrival for 14 days.
- Diplomats must continue to practise social distancing, cough etiquette and hand hygiene.

## Compassionate or medical grounds

Applications on medical or compassionate grounds should be submitted to the relevant state or territory who will consider requests on a case-by-case basis.

Contact details for state or territory public health agencies are available at [www.health.gov.au/state-territory-contacts](http://www.health.gov.au/state-territory-contacts).

## Where can I get more information?

For the latest advice, information and resources, go to [www.health.gov.au](http://www.health.gov.au).

Call the National Coronavirus Helpline on 1800 020 080. This line operates 24 hours a day, seven days a week. If you require translating or interpreting services, call 131 450.

# Appendix 4 - Guidance note: Ensuring physical and mental welfare of international arrivals in individual detention (unaccompanied minors)

## Introduction

You are an officer authorised by the Chief Health Officer under section 199(2)(a) of the *Public Health and Wellbeing Act 2008* (Vic) to exercise certain powers under that Act. You also have duties under the *Charter of Human Rights and Responsibilities Act 2006* (Vic) (**Charter**).

These Guidelines have been prepared to assist you to carry out your functions in relation to Victorian unaccompanied minors who have arrived in Victoria and are subject to detention notices, requiring them to self-quarantine in a designated hotel room for 14 days in order to limit the spread of Novel Coronavirus 2019 (**2019-nCoV**) where no parent, guardian or other carer (**parent**) has elected to join them in quarantine (a **Solo Child Detention Notice**).

As part of your functions, you will be required to make decisions as to whether a person who is subject to a Solo Child Detention Notice should be granted permission to leave their room:

- for the purposes of attending a medical facility to receive medical care; or
- where it is reasonably necessary for their physical or mental health; or
- on compassionate grounds.

Authorised Officers are also required to review the circumstances of each detained person at least once every 24 hours, in order to determine whether their detention continues to be reasonably necessary to eliminate or reduce a serious risk to public health.

## Your obligations under the Charter of Human Rights and Responsibilities Act 2006

You are a public officer under the Charter. This means that, in providing services and performing functions in relation to persons subject to a Detention Notice you must, at all times:

- act compatibly with human rights; and
- give 'proper consideration' to the human rights of any person(s) affected by your decisions.

## How to give 'proper consideration' to human rights

'Proper consideration' requires you to:

- **first**, understand in general terms which human rights will be affected by your decisions (these rights are set out below under 'relevant human rights');
- **second**, seriously turn your mind to the possible impact of your decisions on the relevant individual's human rights, and the implications for that person;
- **third**, identify the countervailing interests (e.g. the important public objectives such as preventing the further spread of 2019-nCoV, which may weigh against a person's full enjoyment of their human rights for a period of time); and
- **fourth**, balance the competing private and public interests to assess whether restricting a person's human rights (e.g. denying a person's request to leave their room) is justified in the circumstances.

## Relevant human rights

The following human rights protected by the Charter are likely to be relevant to your functions when conducting daily wellbeing visits and when assessing what is reasonably necessary for the physical and mental health of children who are subject to Solo Child Detention Notices:

- The right of children to such protection as is in their best interests (s 17(2)). As the Solo Child Detention Notices detain children in circumstances where no parent has elected to join them in quarantine, greater protection must be provided to these children in light of the vulnerability that this creates. Where possible the following additional protection should be provided:
- You should undertake two hourly welfare checks while the child is awake and once overnight. You should ask the child to contact you when they wake each morning and let you know when they go to sleep so that this can be done.
- You should ask the child if they have any concerns that they would like to raise with you at least once per day.
- You should contact the child's parents once per day to identify whether the parent is having contact with the child and whether the parent or child have any concerns.
- You should ensure that where the child does not already have the necessary equipment with them to do so (and their parent is not able to provide the necessary equipment) the child is provided with the use of equipment by the department to facilitate telephone and video calls with their parents. A child must not be detained without an adequate means of regularly communicating with their parents.
- You should ensure that where the child does not already have the necessary equipment with them to do so (and their parent is not able to provide the necessary equipment) the child is provided with the use of equipment by the department to participate in remote education if that is occurring at the school they are attending. Within the confines of the quarantine you should obtain reasonable assistance for the child in setting up that computer equipment for use in remote education.
- You should allow the child's parents to bring them lawful and safe items for recreation, study, amusement, sleep or exercise for their use during their detention. This should be allowed to occur at any time within business hours, and as many times as desired, during the detention.
- The rights to liberty (s 21) and freedom of movement (s 12), and the right to humane treatment when deprived of liberty (s 22). As the Solo Child Detention Notices deprive children of liberty and restrict their movement, it is important that measures are put in place to ensure that the accommodation and conditions in which children are detained meet certain minimum standards (such as enabling parents to provide detained children with food, necessary medical care, and other necessities of living). It is also important that children are not detained for longer than is reasonably necessary.
- Freedom of religion (s 14) and cultural rights (s 19). Solo Child Detention Notices may temporarily affect the ability of people who are detained to exercise their religious or cultural rights or perform cultural duties; however, they do not prevent detained persons from holding a religious belief, nor do they restrict engaging in their cultural or religious practices in other ways (for example, through private prayer, online tools or engaging in religious or cultural practices with other persons with whom they are co-isolated). Requests by children for additional items or means to exercise their religious or cultural practices will need to be considered and accommodated if reasonably practicable in all the circumstances.
- The rights to recognition and equality before the law, and to enjoy human rights without discrimination (s 8). These rights will be relevant where the conditions of detention have a disproportionate impact on detained children who have a protected attribute (such as race or disability). Special measures may need to be taken in order to address the particular needs and vulnerabilities of, for example Aboriginal persons, or persons with a disability (including physical and mental conditions or disorders).
- The rights to **privacy, family and home** (s 13), **freedom of peaceful assembly and association** (s 16) and the **protection of families** (s 17). Solo Child Detention Notices are likely to temporarily

restrict the rights of persons to develop and maintain social relations, to freely assemble and associate, and will prohibit physical family unification for those with family members in Victoria. Children's rights may be particularly affected, to the extent that a Solo Child Detention Notice results in the interference with a child's care and the broader family environment. It is important, therefore, to ensure children subject to Solo Child Detention Notices are not restricted from non-physical forms of communication with relatives and friends (such as by telephone or video call). Requests for additional items or services to facilitate such communication (e.g. internet access) will need to be considered and accommodated if reasonably practicable in all the circumstances.

Whether, following 'proper consideration', your decisions are compatible with each these human rights, will depend on whether they are reasonable and proportionate in all the circumstances (including whether you assessed any reasonably available alternatives).

### **General welfare considerations**

All persons who are deprived of liberty must be treated with humanity and respect, and decisions made in respect of their welfare must take account of their circumstances and the particular impact that being detained will have on them. Mandatory isolation may, for some people, cause greater hardship than for others – when performing welfare visits you will need to be alert to whether that is the case for any particular person.

In particular, anxieties over the outbreak of 2019-nCoV in conjunction with being isolated may result in the emergence or exacerbation of mental health conditions amongst persons who are subject to Detention Notices.

If you have any concerns about the mental health of a detained person, you should immediately request an assessment of mental health be conducted and ensure appropriate support is facilitated. Hotel rooms are not normally used or designed for detention, so you should be aware that a person who is detained in a hotel room could have greater opportunity to harm themselves than would be the case in a normal place of detention.

### **Additional welfare considerations for children**

Children differ from adults in their physical and psychological development, and in their emotional and educational needs. For these reasons, children who are subject to Solo Child Detention Notices may require different treatment or special measures.

In performing functions and making decisions with respect to a detained person who is a child, the best interests of the child should be a primary consideration. Children should be given the opportunity to conduct some form of physical exercise through daily indoor and outdoor recreational activities. They should also be provided with the ability to engage in age-appropriate activities tailored to their needs.

Each child's needs must be assessed on a case-by-case basis. Requests for items or services to meet the needs of individual children will need to be considered and accommodated if reasonably practicable in all the circumstances.

Where available, primary school age children should be allocated rooms that have an outside area where it is safe for active physical play to occur (not a balcony) and consideration should be given to allowing small children access to any larger outdoor areas that are available within the hotel, where possible within relevant transmission guidelines. Although each child's needs must be assessed daily and individually, it can be assumed that it will have a negative effect on a child's mental health to be kept in the same room or rooms for two weeks without access to an adequate outdoor area in which to play.

## **Balancing competing interests**

However, the best interests of children and the rights of anyone who is subject to a Solo Child Detention Notice will need to be balanced against other demonstrably justifiable ends; for example, lawful, reasonable and proportionate measures taken to reduce the further spread of 2019-nCoV.

It is your role to undertake this balance in your welfare checks, based on the information and advice that you have from the department and on the information provided to you by the children that you are assessing.

DRAFT

# Appendix 5 Direction and Detention Notice – Solo Children

## DIRECTION AND DETENTION NOTICE SOLO CHILDREN

*Public Health and Wellbeing Act 2008 (Vic)*  
Section 200

### Reason for this Notice

You have arrived in Victoria from overseas, on or after midnight on 28 March 2020.

A state of emergency has been declared under section 198 of the *Public Health and Wellbeing Act 2008 (Vic)* (the **Act**), because of the serious risk to public health posed by COVID-19.

In particular, there is a serious risk to public health as a result of people travelling to Victoria from overseas. People who have been overseas are at the highest risk of infection and are one of the biggest contributors to the spread of COVID-19 throughout Victoria.

You will be detained at the hotel specified in clause 2 below, in the room specified in clause 2 below, for a period of 14 days, because that is reasonably necessary for the purpose of eliminating or reducing a serious risk to public health, in accordance with section 200(1)(a) of the Act.

Having regard to the medical advice, 14 days is the period reasonably required to ensure that you have not contracted COVID-19 as a result of your overseas travel.

You must comply with the directions below because they are reasonably necessary to protect public health, in accordance with section 200(1)(d) of the Act.

The Chief Health Officer will be notified that you have been detained. The Chief Health Officer must advise the Minister for Health of your detention.

*Note: These steps are required by sections 200(7) and (9) of the Act.*

### Place and time of detention

You will be detained at:

**Hotel:** \_\_\_\_\_ (to be completed at place of arrival)

**Room No:** \_\_\_\_\_ (to be completed on arrival at hotel)

You will be detained until: \_\_\_\_\_ on \_\_\_\_ of \_\_\_\_\_ 2020.

### Directions — transport to hotel

You must **proceed immediately to the vehicle** that has been provided to take you to the hotel, in accordance with any instructions given to you.

Once you arrive at the hotel, **you must proceed immediately to the room** you have been allocated above in accordance with any instructions given to you.

### Conditions of your detention

**You must not leave the room in any circumstances**, unless:

you have been granted permission to do so:

for the purposes of attending a medical facility to receive medical care; or  
 where it is reasonably necessary for your physical or mental health; or  
 on compassionate grounds; or

there is an emergency situation.

**You must not permit any other person to enter your room**, unless the person is authorised to be there for a specific purpose (for example, providing food or for medical reasons).

Except for authorised people, the only other people allowed in your room are people who are being detained in the same room as you.

You are permitted to communicate with people who are not staying with you in your room, either by phone or other electronic means.

*Note: An authorised officer must facilitate any reasonable request for communication made by you, in accordance with section 200(5) of the Act.*

(18) If you are under 18 years of age your parent or guardian is permitted to stay with you, but only if they agree to submit to the same conditions of detention for the period that you are detained.

### Review of your detention

Your detention will be reviewed at least once every 24 hours for the period that you are in detention, in order to determine whether your detention continues to be reasonably necessary to eliminate or reduce a serious risk to public health.

*Note: This review is required by section 200(6) of the Act.*

### Special conditions because you are a solo child

Because your parent or guardian is not with you in detention the following additional protections apply to you:

We will check on your welfare throughout the day and overnight.

We will ensure you get adequate food, either from your parents or elsewhere.

We will make sure you can communicate with your parents regularly.

We will try to facilitate remote education where it is being provided by your school.

We will communicate with your parents once a day.

**Offence and penalty**

It is an offence under section 203 of the Act if you refuse or fail to comply with the directions and requirements set out in this Notice, unless you have a reasonable excuse for refusing or failing to comply.

The current penalty for an individual is \$19,826.40.

\_\_\_\_\_  
**Name of Authorised Officer:** \_\_\_\_\_

As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.

DRAFT

## Appendix 6 Other issues

### Welfare and health service provision

- DHHS Welfare team to conduct a welfare check (as specified below) each day.
- DHHS welfare officers conducting welfare checks phone and email [covid-19.vicpol@dhhs.vic.gov.au](mailto:covid-19.vicpol@dhhs.vic.gov.au) and AO individually to alert AO of medical and welfare issue.
- Residents will be provided with a resident satisfaction survey to complete each week.
- Residents can seek review by the nurse 24 hours a day if required.
- 24 hour on-call medical support will be available for on call subject to demand. This will initially be provided by a Field Emergency Medical Officer, and subsequently through a locum general practice service.
- Medical care is organised by Deputy State Health Coordinator. Deliverables include:
  - Primary care assessments;
  - Prescription provision;
  - 24 hour access to a general practitioner;
  - 24 hour access to nursing assessment.
- It is advisable that where possible, individuals who are in detention are linked to receive telehealth care from their normal general practice provider.

### Safety / mental health

If there are concerns about the safety or mental health of passengers, the process is as follows:

- The nurse will review via phone (or in person if required with appropriate PPE).
- If escalation is required, the nurse will contact the Anxiety Recovery Centre Victoria for psychosocial support.
- Mental health triage at RMH/the Alfred can be contacted as a back-up.
- If the person is acutely unwell or at serious risk, urgent ambulance should be arranged by calling 000.
- Daily welfare check phone calls should be implemented thereafter if not already implemented.

### Family violence (FV)

If there are concerns about family violence / the safety of women and children, the process is as follows:

- Case worker is called to review via phone initially or in person if required (with appropriate PPE).
- A separate room may need to be organised to facilitate the review away from the other family members.
- If deemed necessary, separate rooms should be organised to separate the family members.
- Case worker to review again as required.

### Alcohol and other drugs

If there are concerns about alcohol or other substance abuse or withdrawal:

- Consider nurse/medical review.
- Provide numbers for support services (listed below).
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.

**PLEASE BRING THIS NOTICE WITH YOU.  
THIS NOTICE IS NEEDED TO EXIT THE HOTEL**

## Appendix 7: End of Detention Notice

### END OF DETENTION NOTICE

Public Health and Wellbeing Act 2008 (Vic)

Section 200

**Subject to the conditions below, this Notice is evidence that this detainee has completed their period of detention under a *Direction and Detention Notice* issued to reduce or eliminate the serious public health risk posed by COVID-19.**

#### Detention Notice

You have arrived in Victoria from overseas, on or after midnight on 28 March 2020 and have been placed in detention, pursuant to a *Direction and Detention Notice* that you were provided on your arrival in Victoria (**Notice**).

#### Details of Detention Notice

**Name of Detainee:** <<FIRST NAME>> <<LAST NAME>>

**Date of Detainment and Detention Notice:** <<DETENTION START DATE>>

**Place of Detention:** <<HOTEL>> <<ROOM>>

#### End of Detention Notice

In accordance with section 200(6) of the *Public Health and Wellbeing Act 2008*, I have reviewed your continued detention.

On review of the Notice, I have made the following findings:

you will have served the required detention period by <<DETENTION END DATE>>; and

you have not started exhibiting any symptoms of COVID-19.

In consideration of the above circumstances, I have decided that your continued detention is not reasonably necessary to eliminate or reduce a serious risk to public health.

I advise that your detention pursuant to section 200(1)(a) of the *Public Health and Wellbeing Act 2008* (Vic) and the Notice will end on <<DETENTION END DATE>> at <<EXIT END TIME>> after you have been discharged by an Authorised Officer and have commenced transportation to your ordinary residence.

Although you are no longer to be detained pursuant to the Notice, you are required to comply with all directions currently in force in Victoria. This includes the Stay at Home Directions (No 3) (**Direction**), as amended from time to time. Pursuant to the Direction, if you live in Victoria you are required to travel directly to the premises where you ordinarily reside, and remain there unless you are leaving for one of the reasons listed in the Direction.

If you are a resident of another state arrangements will be made for you to return home. While you remain in the State of Victoria, you are required to comply with all Directions in operation in Victoria. Once you have returned home, you are required to comply with the Directions and/or Orders in place in your home jurisdiction, including any directions that may require you to isolate for a further 14 day period.

In the event that you start to experience symptoms of COVID-19, it is important that you self-isolate and, if necessary, contact your General Practitioner or local Public Health Unit.

## End of Detention Instructions

Your detention **does not end** until the time stated in paragraph 3(4) of this notice. Until that time, at which you will be discharged from detention, you must continue to abide by the requirements of your detention, as contained in the Notice.

**You must not leave your hotel room until you have been collected by Security** at which time you are permitted to travel to the hotel lobby to meet an Authorised Officer who will **sight your identification** and discharge you from detention. **This is estimated to be within thirty minutes of your exit time.**

When leaving detention you **must** adhere to the following safeguards:

if provided to you, you **must** wear personal protective equipment;

you **must** refrain, as far as possible, from touching communal surfaces, such as handrails, elevator buttons and door handles;

you **must** where possible, engage in social distancing, maintaining a distance of 1.5 metres from other people; and

upon leaving your hotel room, you **must** go straight to the foyer for discharge and then immediately after travel to your transportation and travel directly to your ordinary residence.

These steps are to ensure your protection, and reduce the risk of you becoming infected with COVID-19 by any persons detained in the hotel, or in the community, who may have COVID-19.

Until your detention has concluded, you must follow instructions from Authorised Officer/s and any other conditions set out.

## 2 Offence and penalty

- (1) It is an offence under section 203 of the Act if you refuse or fail to comply with the directions set out in this notice, unless you have a reasonable excuse for refusing or failing to comply.
- (2) The current penalty for an individual is \$19,826.40.

\_\_\_\_\_  
Signature of Authorised Officer

Name of Authorised Officer: \_\_\_\_\_

*As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.*

**PLEASE BRING THIS NOTICE WITH YOU.  
THIS NOTICE IS NEEDED TO EXIT THE HOTEL**

## Appendix 8: End of Detention Notice (confirmed case or respiratory illness symptoms)

*Public Health and Wellbeing Act 2008 (Vic)*

### Section 200

An Authorised Officer has decided to end your Direction and Detention Notice. This decision has been made following the mandatory review of your Direction and Detention Notice because you *[have returned a positive test for COVID-19] or [have started displaying symptoms of respiratory illness]*.

#### 1. Detention Notice

You have arrived in Victoria from overseas, on or after midnight on 28 March 2020 or on or after midnight on 13 April 2020 and have been placed in detention, pursuant to a Direction and Detention Notice that you were provided on your arrival in Victoria (**Notice**).

#### 2. Details of End of Detention Notice

**Name of Detainee:** \_\_\_\_\_

**Date Notice Made:** \_\_\_\_\_

**Date Notice Expires:** \_\_\_\_\_

**Place of Detention:** \_\_\_\_\_

**Medical Facility:** \_\_\_\_\_

*(if medical care is required)*

**COVID-19 Status or respiratory illness symptoms** [tick applicable]:

COVID-19 confirmed: \_\_\_\_\_  coughing

*[insert date of test]*

fever or temperature in excess of 37.5 degrees  sore throat

congestion, in either the nasal sinuses or lungs  body aches

runny nose  fatigue

#### 3. End of Detention Notice

In accordance with section 200(6) of the Public Health and Wellbeing Act 2008, I have reviewed your continued detention.

On review of the Notice, I have noticed that you *[have been diagnosed with COVID-19] or [have exhibited the symptoms of respiratory illness, as outlined above at paragraph 2(8) [delete as applicable]*.

In consideration of the above, I do not believe that continued detention is reasonably necessary to eliminate or reduce a serious risk to public health because:

- a) *[if applicable]* You have been confirmed to have COVID-19 and will be required to self-isolate in accordance with the Isolation (Diagnosis) Direction, in a premises that is suitable for you to reside in, or a medical facility, until such a time you are notified that you no longer need to self-isolate and a clearance from isolation (self-isolation) is given;
- b) *[if applicable]* You are showing symptoms of respiratory illness and will be required to self-isolate in accordance with the Stay at Home Direction currently in force in Victoria and will need travel directly to your ordinary residence once you leave detention, and remain there unless you are permitted to leave for a reason specified in the Stay at Home Direction; and
- c) You are ordinarily a resident in Victoria.

Compliance with Directions made by the Deputy Chief Health Officer is required to reduce or eliminate the serious risk to public health posed by COVID-19. It is essential that you *[self-isolate in accordance with the Isolation (Diagnosis) Direction until such time as you are notified that you no longer need to self-isolate and a clearance from self-isolation is given]* OR *[return to your ordinary residence and remain there unless you are permitted to leave for a reason specified in the Stay at Home Direction. Please monitor your symptoms and seek appropriate medical care if required]*. *[delete as applicable]*.

The Notice is ended subject to the directions below under paragraph 4. Non-compliance with these directions is an offence.

#### 4. Conditions

- You will be transited from the hotel where you have been detained to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]* by an Authorised Officer. You may / will *[delete as appropriate]* be supervised during transit.
- While you are transiting to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]*, you must refrain from touching communal surfaces, as far as possible, such as door knobs, handrails, lift buttons etc.
- When you are transiting to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]*, you must, **at all times**, wear appropriate protective equipment to prevent the spread of COVID-19, if directed by the Authorised Officer.
- You must practice social distancing, and as far as possible, maintain a distance of 1.5 metres from all other people, including any Authorised Officer escorting you.
- When you are transiting to your ordinary residence / Premises for Isolation pursuant to Isolation (Diagnosis) Direction / medical facility *[delete as appropriate]*, you must, **at all times**, comply with any direction given to you by any Authorised Officer escorting you.

#### 5. Offence and penalty

It is an offence under section 203 of the Act if you refuse or fail to comply with the directions and requirements set out in this notice and/or the Isolation (Diagnosis) Direction *[if applicable]*, unless you have a reasonable excuse for refusing or failing to comply.

The current penalty for an individual is \$19,826.40.

**PLEASE BRING THIS NOTICE WITH YOU.  
THIS NOTICE IS NEEDED TO EXIT THE HOTEL**

\_\_\_\_\_ **Signature of Authorised Officer**

**Name of Authorised Officer:** \_\_\_\_\_

*As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.*

DRAFT

## Appendix 9: Guidance Note

**How to conclude a person's detention under a *Direction and Detainment Notice* if they have served the required period of detention, become a confirmed case of COVID-19 or have symptoms of respiratory illness**

### **What do you have to do before you issue an End of Detention Notice?**

- if the person has served 14 days of detention you must decide how to administer the completion of that person's detention arrangements:
  - selecting a time for the person to attend a foyer after the 14 day period has concluded - it is recommended that this occur in small groups of people who are practicing appropriate social distancing and with sufficient time between groups to avoid crowds. This will ensure Authorised Officers can safely discharge each detainee
  - collecting a person from their hotel room after the 14 day period has concluded – this approach should be carefully administered to ensure Authorised Officers can safely discharge and escort each person to their transport
- if a person's detention is concluding because they have a confirmed case of COVID-19 or symptoms of respiratory illness they must be discharged when it is safe to do so – e.g. when other detained people are in their rooms, under full supervision etc.
- complete all sections of the Notice, including clearly documenting the reasons for the end of detention and the details recorded on the Direction and Detainment Notice
- update all the registers and relevant records about the person's detention arrangements
- ensure the reference number is completed.

### **When should you issue an End of Detention Notice?**

- It is preferable that an End of Detention Notice be issued the day before a person's detention is set to conclude – this will give the person adequate time to prepare (e.g. to pack their belongings) and ensure the orderly discharge of large groups of people.
- A notice may be provided earlier but it creates a risk that a person may develop COVID-19 symptoms before the day the detention period must end.

### **What do you have to do when you issue an End of Detention Notice?**

When you issue an End of Detention Notice you must:

- explain the reason why detention has ceased and is no longer necessary to eliminate or reduce a serious risk to public health
- advise that person of the arrangements being made for their discharge from detention (e.g. at an allocated time at the foyer; when they are escorted from their room etc)
- notify they person that although they are no longer subject to detention when they are discharged and leave the premises of their detention, they are still subject to the directions which are in force in Victoria, including
  - if they are ordinarily resident in Victoria, they are required to return immediately to their ordinary residence, where they must remain, in accordance with the Stay at Home Directions (No 2)
  - if they have a confirmed case of COVID-19, they must isolate at home in accordance with the Isolation (Diagnosis) Direction

if the person is ordinarily resident outside of Victoria, notify the person of their travel arrangements and that they are to immediately travel to the airport to leave the State

# Appendix 10: Release Process 'Running Sheet'

## ***Evening prior to release***

- Exit Notices and associated materials prepared and dropped to hotel  
[Separate process to be developed on preparation of materials]
- Early hours releases transport booked (DJPR)
- Early hours releases documentation actioned by AO evening prior, including signing of exit checklist  
If issues or lack of exit time, contact: \_\_\_\_\_
- Notices for all other exiting detainees placed under doors (by Security)

## ***Day of release***

- Security door knocks early departures and they can leave
- Security door knocks exiting detainees at agreed time and brings people to exit location

## ***Release process***

- AO to sight ID and notice (notice clearly states both items must be available at release. All parties incl infants should have a notice)
- Confirmation of ID check noted on exit sheet
- If any issues, a blank End of Detention Notice can be filled out and signed by the AO
- AO to inform detainee of release (highlight conditions etc)
- Detainee signs exit sheet
- Welfare staff provide cab charge, facilitate transport etc

## Appendix 11 Register of permissions granted under 4(1) of the *Direction and Detention Notice*

Authorised officer: \_\_\_\_\_

| Ref No. | Date | Name of detained person | Reason | Time-Out | Time-In |
|---------|------|-------------------------|--------|----------|---------|
|         |      |                         |        |          |         |
|         |      |                         |        |          |         |

**Attachments:** Draft Mandatory Quarantine Health and Welfare Plan - 18 April 2020.docx (2.38 MB)

---

Dear Pam and Chris / Deputy State Controller – Operation Soteria

A number of people in various roles, especially my colleagues Claire Harris and others, have worked through today to get this draft plan ready for use.

There are only a small number of residual issues, which are listed now as comments in the margin, that are beyond my role to resolve. As you know, Public Health Command is very keen to provide the response with the best advice in the space of healthcare and welfare, and I commend this plan to you.

I recommend this plan is endorsed as an interim plan, the comments are addressed through decision of the DHHS Commander / State Health Coordinator or deputy (as I understand it the leads for the actual provision of medical care specifically and the roles – through Cameron/Jenny that commissioned general practitioners) and then the interagency Soteria group could be provided the plan by Deputy State Controller Health – Operation Soteria for awareness and any comments and endorsement.

Can you / Chris take it from here?

Kind regards

Finn

Dr Finn Romanes  
 Public Health Commander  
 Novel Coronavirus Public Health Emergency

## Introduction

Mandatory quarantine for all people arriving from overseas into Victoria was introduced on 28 March 2020.

### Purpose

This plan outlines the policy for welfare and, medical, nursing and mental healthcare to individuals detained in mandatory quarantine.

### Scope

This plan will outline healthcare and welfare arrangements for people in mandatory quarantine as part of Operation Soteria.

This should be read in conjunction with the *COVID-19 Policy and Procedure – Mandatory Quarantine (Direction and Detention Notice)* and the *Operation Soteria – Operational Plan*.

### Audience

This document is intended for use by DHHS staff, all departments and organisations involved in Operation Soteria and the governing bodies described below.

### Governance and oversight

#### Operation Soteria

A diagram indicating the governance of strategy / policy and operation of the mandatory quarantine program is described in **Appendix 1**.

#### Roles and responsibilities

The Public Health Commander (through the Deputy Public Health Commander / delegate) will take responsibility for approving this plan.

The State Controller Health (through the Deputy State Controller Health) operating through the Emergency Operations Centre (EOC) has operational accountability.

The DHHS Commander – Operation Soteria is responsible for:

- provision of welfare to individuals in mandatory quarantine (delegated to a Director Health Protection and Emergency Management);
- ensuring the safety and wellbeing of individuals in mandatory quarantine and DHHS staff;
- ensuring a safe detention environment at all times.

The Deputy State Health Coordinator is responsible for:

- provision of healthcare to individuals in mandatory quarantine.

#### Co-ordination of medical care – Requirement for a DHHS Medical Lead

Due to the large number of individuals in mandatory quarantine, the high risk environment and length of time in detention, and the potentially complex needs of this cohort, a DHHS Medical Lead should be appointed to oversee medical care, including care through general practitioners and any nursing – including mental health nursing – care provided. The DHHS Medical Lead should have a healthcare background and have experience managing complex programmes for vulnerable populations. The DHHS

Medical Lead should oversee the staffing of the various sites, reassess medical workforce needs, provide advice to staff, and ensure the minimum standards of care are being met.

The DHHS Medical Lead should identify any risks or issues and refer these to the Compliance Lead and State Control Centre Emergency Operations Centre for urgent action. They should be a senior point of contact in relation to medical and nursing care for the Compliance Lead, the State Emergency Controller / DHHS Commander, and the Public Health Commander and Deputy Public Health Commander for Physical Distancing.

## Standards for healthcare and welfare provision

### Meeting the needs of people in detention

The health and welfare of persons in detention is the highest priority and the main purpose of this plan. Mandatory detention removes some safeguards for health and welfare (such as free access to medical care of choice) and requires the highest standard of medical care at all times. This is in addition to the elevated risk of COVID-19 infection in returned travellers.

All reasonable requests should be facilitated where possible, to ensure that all people in detention are as comfortable as possible during their mandatory quarantine period.

### Physical examination and telemedicine

People in quarantine are entitled to receive the highest standard of medical assessment and care, including a physical examination if indicated. It is not appropriate to defer or delay physical examination because a person is in mandatory quarantine. All requests for and findings from physical examinations should be documented in the medical record, as described above. If a healthcare provider refuses to see a patient that they have been requested to see, the reason should be recorded in the notes.

Sufficient and appropriate PPE should be provided. If this is not available, it should be flagged immediately to the team leader/site manager to arrange for urgent stock to be delivered from another site. It may be possible to contact a nearby quarantine hotel and arrange for urgent PPE stock to be brought over to that hotel. If appropriate PPE is worn and used correctly, there should be no additional risk to the health care provider, or the patient (quarantined individual).

Any request for medical review should be carefully considered before determining whether telemedicine or physical review is most appropriate in that scenario. Phone consults or telemedicine should not be used as a substitute for direct clinical review if it is clinically indicated. If healthcare providers are concerned for their own safety, the case should be escalated to the DHHS Team Leader.

### Clinical handover

All clinical interactions must be documented, and important/ongoing issues handed over to the team covering the next shift. Nurses should hand over to the nurses on the next shift, and also the team leader so they are aware of the outstanding issues. GPs who review patients (over the phone or in person) must handover the outcome of the assessment and ongoing management plan to the nurses, and to the GPs on the next shift (or the clinical lead) if relevant. GPs contracted by Medi7 also have a Clinical Lead who is a Medi7 doctor acting as the coordinating point for these doctors. It would be advisable for a daily morning meeting to occur between the team leader, nursing cohort, medical officer and AO for every hotel. During this meeting, current issues that require escalation may be flagged to the team leader and escalated as appropriate. Documentation of the morning meeting and allocation of special tasks should be recorded in the DHHS notes.

## Triage and waiting times

Requests for medical care must be actioned within a specific time frame, in keeping with the acuity of the issue and the availability of services. Where staffing allows, the doctor may see patients before the nurse, particularly if the request is deemed urgent.

- For emergency/life-threatening issues, the patient, family member, doctor, nurse, DHHS personnel or hotel staff should call 000 immediately
- For urgent physical health issues that do not require 000, the quarantined individual must be reviewed within 30 minutes by the hotel nurse (by contacting the hotel nurse direct line) who should review the patient in person and alert the on-call doctor to arrange urgent review if required. The GP should attend as soon as possible and within one hour.
- For urgent mental health issues, the patient should be reviewed by the nurse or doctor-on-call within one hour. Where a quarantined individual may pose a risk of harm to themselves or others, a full risk assessment must be conducted by the doctor-on-call and escalation as per current policy – see safety and mental health section.
- For non-urgent issues (require assessment and management), the quarantined individual must be reviewed by a nurse (within four hours) first, then the on-call doctor must be contacted to arrange review depending on the acuity of the issue but within a 12 hour period.
- For all other issues, review by the nurse should be within eight hours and the on-call doctor (if required) within 24 hours.
- For prescriptions of regular medications, these should be arranged within a 24-hour turnaround period.
- For urgent prescriptions required same day, these should be arranged within 8 hours.

**Commented [FR(1):** The Deputy State Health Coordinator should use this policy to build these expectations in, and communicate them to the medical providers. The DSHC presumably holds the contracts. If not met, escalate to Deputy State Controller and decide whether to choose a new provider (but obtain medical records on detainees first from Best Practice).

| Acuity of issue  | Time frame for response   |
|--|---|
| Emergency: serious health concern / life-threatening issue | Immediate – call 000 ASAP   |
| Urgent physical health concerns                            | Nurse review as soon as practicable (within 30 minutes)<br>GP review within 1 hour                                |
| Urgent mental health issue                                 | Doctor or nurse review within 1 hour  |
| Non-urgent issue requiring review and management           | Nurse review within 4 hours<br>GP review (if required) within 12 hours  |
| Minor health issue, non-urgent                             | Phone review as soon as practicable<br>Nurse assessment within 8 hours<br>GP review (if required) within 24 hours |

## Information and data management

There should be a minimum number of secure databases used for the storage and handling of confidential data on people in detention. This is to prevent fragmentation of records management and to reduce the risk of critical information not being available to DHHS, health or welfare staff providing for the health and welfare needs of people in detention.

The following information management systems are authorised for use in this program:

- The Public Health Event Surveillance System (PHESS);
- The healthcare and wellbeing database for mandatory quarantine (Dynamic CRM Database);
- Best Practice general practice software;
- Paper records (until transitioned to systems above).

The State Controller Health, DHHS Commander - Operation Soteria (or delegate) and Public Health Commander (or delegate) should be able to access any record within these systems to enable oversight of the health and welfare of people in detention.

The Department of Jobs Precincts and Regions (DJPR) will provide a list of people arriving internationally that populates PHESS and the Dynamic CRM Database. In turn, medical information is then stored in PHESS and Best Practice. Welfare and Compliance information is stored in the Dynamic CRM Database. Within 24 hours of arrival, both the Dynamic CRM Database and PHESS will contain a complete list of people in detention. PHESS will be the complete record for all medical and compliance records for a person who was in detention in Victoria as part of this program.

An Intelligence Cell will be introduced into the EOC to oversee reporting arrangements.

## Medical records

### Requirement for accessible medical records

Each quarantined individual must have a medical record accessible to all health care providers who require access to it and who are providing care. This record should capture the person's significant medical history, current medications, allergies and any other significant components of the medical history, where these have been revealed by the person in detention or discussed as part of medical care provided to the person during detention. Each time health care is requested **and** provided it must be documented in this record.

### Confidentiality and access to medical records

Any medical record created or held by DHHS for a person in detention is confidential and must only be accessed by persons coordinating and providing care for the person. The records will belong to DHHS, and can be required to be provided at any time by the medical service contractor to DHHS for review, from the Best Practice software.

These records should be stored securely and should not be accessed by anyone not providing care for the person. Specifically, these medical records must only be accessed or viewed by an AHPRA-registered health practitioner employed by DHHS to provide services to people in detention, an authorised officer, or the Public Health Commander, State Controller Health, DHHS Commander – Operation Soteria or their named delegate. Other persons involved in Operation Soteria should not access a medical record for an individual unless authorised on a named basis by the Public Health Commander (or delegate) or the State Controller Health (or delegate).

Accurate and comprehensive medical record keeping is essential for the health and safety of all individuals in mandatory quarantine and will ensure continuity of care for healthcare providers in subsequent shifts. If medical notes are recorded on paper, these should be stored securely and uploaded to the information management system as soon as is practicable and within 72 hours at most. If a doctor completes an assessment they must provide a written record of this to the nursing staff, either on paper or via email, if an electronic medical record system is not available.

Any medical records documents that are potentially contaminated with COVID (SARS-CoV-2) should be safely placed in plastic pockets to reduce the risk of infection transmission.

## Follow-up of results

It is the responsibility of the doctor who orders any test (COVID-19 or otherwise) to follow up on the result and notify the patient in a timely manner. If they are not able to do so, they must handover this task to the next doctor on-call, inform the nurse, and record this in the medical record.

## Provision of healthcare

### Medical care

#### Access to regular general practitioners and specialists

A person in detention should be able to access care through their normal general practitioner and specialist through telehealth arrangements if they request it. If that is to occur, the person should indicate who their provider is and should provide the contact details of the general practitioner to the nursing lead / Team Leader for their time in detention, so that the general practitioner can act as an advocate for, and communicate with, the nursing team about the health of the person in detention.

If a detainee has been reviewed by their personal GP or has received a specialist consultation via telehealth whilst detained, a letter from the GP/specialist should be requested within four hours following the review and documentation of this consult, outcome and plan should be transcribed into the Best Practice medical record. The name of the external reviewing doctor, time and contact details must also be documented into the detainee's DHHS notes by the hotel general practitioner. There must be clear communication and documentation regarding who will follow up and review any plans made by external clinicians.

#### Provider of general practice services

General practitioners (GPs) are provided by Medi7 and Doctor Doctor. **[MORE DETAILS – point of contact, contact information, ABN]**

General practitioners (GPs) supplied by Medi7 and Doctor Doctor are providing 24-hour medical support to individuals in mandatory quarantine. GPs should be engaged at a ratio proportionate to the burden of healthcare problems across the hotels. The directors of the contracting companies should teleconference with the Deputy State Health Coordinator twice weekly to review workload and vary this ratio if necessary.

GPs attend in person from 8.00am to 6.00pm daily and revert to telehealth arrangements at night.

GPs are contactable via the nurses at each location. From 6pm on a weeknight, the nurse may contact the on-call GP. The on-call GP can provide telehealth services as required or attend the relevant hotel. Over weekends and on public holidays, a group of 8-10 deputising GPs is accessible to the on-site GPs should further assistance be required.

Medi7 is currently implementing a Best Practice medical record system for record-keeping. This will be uploaded to the DHHS Dynamic CRM Database.

#### Clinical lead for general practice services

Medi7 has now appointed a clinical lead to oversee and coordinate the doctors working across all hotels participating in mandatory quarantine each day. The number of doctors per cluster of hotels is reviewed each morning before determining where each doctor is allocated. The Medi7 GPs can report issues to the clinical lead and seek advice and additional support. The Medi7 clinical lead should update and report concerns to the Deputy State Health Coordinator.

**Commented [FR(2):** Deputy State Health Coordinator (or role that organised medical services) should include this information, including where the contracts re held)

## Pathology and pharmacy services

### Pharmacy arrangements

Specific pharmacies in proximity to each hotel should be engaged to allow for prompt procurement of necessary medications and equipment for quarantined individuals. The address, contact details, and operational hours of the pharmacy for each hotel should be distributed to all staff working in that hotel and should be easily accessible. Each hotel should know which pharmacy can be used for urgent scripts out of hours, if their usual pharmacy cannot provide this service.

These pharmacies will accept prescriptions emailed by the resident's usual GP or made by the on-site GP and will have delivery arrangements in place to the relevant hotel.

These pharmacies have a billing arrangement in place with the department.

Should the existing complement of pharmacies prove incapable of meeting demand, extra pharmacies will be sought through engagement with the Pharmacy Guild.

See Appendix 8 - Hospital and pharmacy contacts for each hotel

### Prescriptions

Both prescribed and over-the-counter (OTC) medications can be ordered from the pharmacies described above. A record should be kept of all medications dispensed to quarantined individuals.

### Prescribing benzodiazepines

When prescribing benzodiazepines for anxiety in mandatory detention, GPs should exercise a high degree of caution. Care should be taken to ensure that benzodiazepines are not prescribed to individuals who are consuming alcohol, or who have other contraindications to these medications. These medications should only be required after careful history taking and assessment, to individuals who are regularly prescribed them. If they are required to be prescribed, no more than four (5mg) tablets should be prescribed at any time. Repeat prescriptions for benzodiazepines should not be given unless there is clear justification.

All new medication prescriptions for benzodiazepines, opioids, anxiolytics and antipsychotics must be discussed with the medical clinical lead by the prescribing general practitioner. A risk assessment should be performed by the prescribing general practitioner and medication changes should be documented and followed up by the prescribing doctor or handed over to the shift doctor next on call. General practitioners will take full responsibility and indemnity for all new prescriptions or medication changes.

### Pathology arrangements

#### Swabs

Each site should have a twice-daily pathology courier pickup, transporting swabs taken from that site to VIDRL.

Currently, the delivery of swabs to each hotel and the arrangement of couriers is being undertaken by

**REDACTED**

The marking requirements for each swab in order to ensure appropriate delivery of results and prioritisation of testing are as follows:

- The pathology request slip must be clearly marked as a hotel quarantine swab – this should include the clinical details section or at the top of the form (e.g. "Swab for a person in mandatory quarantine in hotel Crown Metropol, room 1234");
- There must be three identifiers on every swab and pathology request (name, DOB, address);

- The address must be listed as the hotel where the person is being quarantined, not their usual home address;
- A phone number must be provided for every patient being swabbed;
- The name and phone number of the testing clinician **and** the responsible authorised officer for the hotel should be included.

#### **Provision of swab information to public health**

Within each hotel there should be a spreadsheet, case list or other record of all quarantined individuals who have had COVID-19 testing carried out. This must record the following details as a minimum dataset for each swab taken:

- Testing doctor (and time)
- Name of quarantined individual tested (full name)
- Date of birth
- Usual address
- Contact number
- Email address
- Hotel address and room number
- Date of arrival
- Date of expiry of 14 days of detention

All COVID-19 swabs taken should be documented in this spreadsheet, even if the person has already had swabs taken while in quarantine.

#### **Following up results**

It is the responsibility of the medical practitioner who ordered the test to follow-up the result of the test and ensure arrangements are in place to advise the patient of the result, whether negative or positive. If the result is positive, the requesting medical practitioner must notify the department on 1300 651 160.

#### **Negative swab results**

Quarantined individuals who are tested for COVID-19 may receive negative test results. This may lead to confusion and distress for the individual, as they may believe that they can now leave mandatory quarantine. In the event of a negative result, the nurse or doctor must explain to the person the implications of the result and reaffirm the public health need for the person to remain in mandatory quarantine until they reach 14 days from the start of their mandatory quarantine.

#### **Other pathology**

Other pathology requests (such as routine blood tests) should be deferred if possible until after the quarantine period. If other tests are required (as per the treating clinician – on-site doctor or person's own GP), this should be coordinated by the team leader in consultation with the GP/nurse. Equipment for taking bloods should be available at (or available to be transported to) the hotel. These specimens should be labelled as per the procedure for labelling COVID-19 swabs (same requirement for identifiers). The preferred provider for these types of pathology specimens is Melbourne Pathology.

## **Nursing care**

### **Minimum nursing requirement**

Nurses (including mental health nurses) are provided by Your Nursing Agency (YNA).

Nurses should be onsite at each hotel across the full 24 hour period. The required nursing complement should be continually reviewed and adapted according to need. This should be based on the number of

individuals in quarantine at that site, the current workload and burden of healthcare and mental health issues expected and reported at that site, and the skillset and experiences of the nurses rostered at that site.

There should be one emergency department (ED) trained nurse available 24 hours, two general registered nurses during the day, one general registered nurse on overnight, and one mental health nurse on during the day. Where nurses report that their workload is not safe and that additional nursing support is required, staffing should be reviewed and adapted as necessary.

There should be a nurse coordinator or nurse team leader each day at each site, who is rostered on a longer shift (e.g. 12 hours). This is to ensure the other nurses are adequately managed and supported, to ensure continuity of care and handover of outstanding tasks / concerns. In general, longer nursing shifts are preferable for this reason.

## Mental health care

### Mental health nurses

Mental health registered or enrolled nurses should be rostered to each hotel. The number and coverage should be increased at hotels where a growing mental health caseload is identified.

### Contacting a nurse at each site

A department-supplied mobile phone should be provided to all nurses at each site. Residents should be able to contact the nurse either directly by phone, or via the hotel concierge. The nurse phone numbers should be accessible on the hotel roster (accessible on Sharepoint). Where the nurse deems a quarantined person to have significant needs, significant requirement for medical care, or to be at risk of mental health issues, they may give the quarantined individual their mobile number so that they can contact them directly if needed. Nurses may instigate daily, twice daily, or more frequent phone-calls to check up on the individual. This is in addition to any required welfare phone call. This provides an additional safety net for the health and welfare of quarantined individuals. If a person who normally frequently calls the nurse stops calling, the nurse for that individual needs to contact the individual to check on their health and welfare.

### Summary of available mental health services

Mental health services are available to people in mandatory quarantine through the following sources:

1. Calling Lifeline or Beyond Blue;
2. Nurse or mental health nurse on site for initial assessment;
3. Doctor on-call for non-urgent or urgent review;
4. NorthWestern Mental Health triage service (phone 1300 TRIAGE);
5. Referral to CART (Complex Assessment and Referral Team) [Method for calling / contact];
6. Calling 000 for emergency care;
7. Quarantined individuals can also contact their usual mental health provider or be assisted to contact that provider. This includes a psychologist, counsellor, psychiatrist or other provider. Care can then be provided via telehealth.

### Phone support services

Individuals in mandatory quarantine can contact Beyond Blue (1300 22 4636) and Lifeline (13 11 14) whilst in detention but must also be reviewed by the on-call doctor and a risk assessment performed if there are mental health concerns. The department's Mental Health and Drugs Branch is exploring further proactive mental health resources with Beyond Blue. [Update]

Commented [FR(3):REDACTED] should provide numbers / method for contact

Commented [FR(4):REDACTED]

## Nurses and doctors

Nurses and doctors can review persons with mental health concerns upon request from the individual or from other sources for example if a concern is flagged by the welfare check, the authorised officer, security or by another resident. Mental state examination and risk assessment should be performed by the general practitioner allocated to the hotel.

The mental health nurse may assist with this process but the outcome of the risk assessment must be reviewed by the hotel general practitioner unless the detainee has received urgent CATT assessment or has required a transfer to a mental health unit or hospital. Psychiatric input regarding additions or changes to existing antipsychotic and anxiolytic medications may be required and should be sought by the hotel general practitioner as indicated.

Refer to the Nursing section above for further information on mental health nursing presence in the hotels.

## NorthWestern Mental Health triage service

Melbourne Health's NorthWestern Mental Health triage service has been engaged from 28 March 2020 to provide specialist mental health support through direct or secondary consultation for persons in quarantine. Nurses and residents can contact **1300 TRIAGE (1300 874 243)** for specialist mental health support. The person making the initial referral should request the specialist priority line.

## Complex Assessment and Referral Team

CART is a new service set up by DHHS which can provide advice and support for mental health issues, drug and alcohol problems, family violence and other concerns. This service is currently staffed by two clinicians, one working 8am-2pm, and the other 2pm-8pm. If a full assessment is required CART does not currently have the capacity to complete this, and if more than phone support/advice is required, they will have to refer back to the nurse to arrange for assessment and further management from another source (e.g. NorthWestern Mental Health triage).

## Mental health emergency

If there is concern about a mental health emergency in a quarantined individual (i.e. acute suicidal ideation, thoughts of self-harm, or psychosis), and there is a delay in contacting the psychiatric triage team (**1300 TRIAGE**), the quarantined individual should be reviewed by the general practitioner as a matter of urgency and have a risk assessment completed within an hour.

The general practitioner should then assess the quarantined individual to determine if transfer to hospital via ambulance is required for urgent psychiatric assessment or if psychiatric advice can be obtained over the phone. If the quarantined individual is deemed as needing urgent psychiatric review and is not willing to be transferred for assessment, the doctor on call will need to decide if enacting provisions within the *Mental Health Act 2014* is required.

As for other medical emergencies, the authorised officer, reception or other parties do not need to be contacted before 000 is called. First responders should not be denied access to people in mandatory quarantine who make a 000 call.

## Who can alert the welfare team to mental health concerns relating to a quarantined person?

A quarantined person, authorised officer, nurse or doctor, security, Vic Police, family members, or anyone else who has a concern about the mental health or wellbeing of a quarantined person can raise this concern to the welfare team. All concerns should be escalated as necessary and documented/recorded in the database.

## Escalating medical, nursing or mental health concerns

See section on Escalation for situations requiring escalation.

See Appendix 3- Clinical escalation/referral pathway

## Emergency services

In the case of an emergency, a nurse, doctor or DHHS staff member can call 000. As soon as is practicable the person should inform the operator that the call is from a mandatory quarantine hotel and the person may be at increased risk of infection with COVID-19, so that appropriate precautions can be taken. The current hotels in operation are in the catchment of three major hospitals:

- The Alfred;
- Royal Melbourne Hospital;
- Royal Children's Hospital.

As per other medical emergencies, the Authorised Officer, reception or other parties do not need to be contacted before 000 is called. First responders must not be denied access to people in mandatory quarantine who make a 000 call.

## Transport to/from hospital

### Transfer to hospital for people with suspected or confirmed COVID-19

- Adult passengers requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity
- Children should be transferred to the Royal Children's Hospital accompanied by a parent or guardian
- If the hospital transfer is non-urgent, the nurse, doctor or AO may assist in arranging the transfer.
- If the hospital transfer is urgent, call 000 to request ambulance and inform them that the passenger is a suspected (or confirmed) case of COVID-19.
- Contact the Admitting Officer at RCH/RMH/The Alfred and inform the hospital of patient and details.
- Staff should don full PPE (droplet and contact precautions) and the passenger must wear a single-use surgical mask if tolerated.
- All relevant staff including AO must be notified prior to the transfer (but this should not delay the provision of urgent medical assistance or the request for an ambulance if needed).
- AO must view appropriate authorisation.
- All residents who are: in high risk groups, unwell, breathless or hypoxic (O2 sats <95%) should be considered for hospital transfer.

### Unplanned transfers to hospital

Unplanned transfers occur via a phone call to Ambulance (AV) via 000 from the nurse, doctor, other staff member or quarantined person. The nurse or doctor then notifies an Authorised Officer of the transport. The patient is then treated and transported by AV or Non-Emergency Patient Transport (NEPT) to hospital.

### Planned transfers to hospital

Planned transfers occur via clinical staff at each hotel notifying the Authorised Officer of the transport and arranging transport via the most appropriate transport provider (e.g. AV, NEPT, Clinic Transport Service, etc). The transport then occurs to the relevant location.

## Summary of hospital transfer

The following is a general overview of the transfer of a patient to hospital involving nurses, doctors, Authorised Officers (AOs), Ambulance Victoria (AV) and hospitals.

1. Nurse/doctor makes assessment that patient requires hospital care.
2. The AO grants permission for the individual to temporarily leave mandatory quarantine. Leave should be recorded on the business system or register.
3. All relevant staff including the AO must be notified prior to the transfer (however this should not delay the transfer if it is urgent/an emergency).
4. Patient is transferred to the appropriate hospital. Patients requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
5. If the hospital transfer is urgent call 000 to request an ambulance and inform them that the passenger is in mandatory quarantine. Let them know if the person is a suspected (or confirmed) case of COVID-19.
6. Contact the Emergency Department Admitting Officer at RCH/RMH/the Alfred to inform the hospital of patient and details.
7. Staff should don full PPE and the passenger must wear a single-use surgical mask if tolerated.
8. All residents who are in high risk groups, unwell, breathless or hypoxic (O<sub>2</sub> sats <95%) should be considered for hospital transfer.
9. Assessment and diagnosis are made by the treating team at the hospital. A plan is made for either admission to the hospital or discharge back to the hotel (possibly for more appropriate medical care to be arranged at the hotel).
10. Prior to any movement of the patient out of the ED, a new plan or detention approval must be sought for either return to the hotel or admission to a different location in consultation with the compliance team (receiving hospital and compliance team).
11. Hospitals will need to contact the AO at the relevant hotel, then the AO team lead will advise Lead Executive Compliance to obtain any necessary approvals.

See Appendix 7- Ambulance transfer flowcharts

## Discharge from hospital

Discharge from hospital should be at the behest of the treating team. Refer to the current 'Guidelines for health services and general practitioners (see <https://www.dhhs.vic.gov.au/health-services-and-general-practitioners-coronavirus-disease-covid-19>).'

Transfers from hospital back to the hotel are arranged by the hospital in liaison with the DHHS Team Leader.

## Anaphylaxis

Where individuals in mandatory quarantine have severe allergies and a history of anaphylaxis, this must be recorded and specifically flagged during the welfare survey completed on the way to or at the hotel at the beginning of the stay. All individuals who require medications including antihistamines, corticosteroids and EpiPens should have an adequate supply of these. If they require an additional prescription for these this should be facilitated by the healthcare providers at the hotel and the nominated pharmacy as a matter of urgency.

If a person reports that they are having an anaphylactic reaction, 000 should be called immediately. This does not need to be escalated to an AO (or any other member of staff, medical or non-medical), an ambulance should be called immediately by whoever is first aware of the situation. The health of the quarantined individual and the provision of urgent healthcare is the priority in any medical emergency. The Authorised Officer can be informed as soon as is practicable thereafter.

**Note: persons may call 000 themselves in the event of an emergency, they do not need to do this via an AO, a nurse or reception in an emergency.**

DRAFT

## Provision of welfare

### Airport screening process

At the airport, DHHS nurses and Department of Agriculture, Water and the Environment (DAWE) biosecurity officers will screen all passengers arriving from overseas for symptoms of COVID-19. Nurses will perform a temperature check on each passenger.

### Management of an unwell person at the airport

Any passengers who screen positive on this health check will trigger the DAWE biosecurity officer to contact the Human Biosecurity Officer (HBO) on-call for the department via 1300 651 160. After discussion with the HBO, if it is determined that the person meets the criteria for a suspected case of COVID-19, the following actions should take place:

- The HBO should organise an ambulance transfer to the Royal Melbourne Hospital (or Royal Children's Hospital) for testing and assessment.
- The AO at the airport should log the person as requiring mandatory quarantine at a specified hotel and then should follow-up with the hospital to update on whether the person has been found to be negative, so a transfer by (patient transfer/ambulance/maxi taxi etc.) can be organised to bring the person to the assigned hotel.
- If the person is unwell and requires admission to hospital, the Compliance Lead should be informed.
- If the person is well enough to be discharged they should return to the hotel through an arrangement by the AO.
- If they are a confirmed case they should be placed on a COVID-19 floor. If they are not, they can be placed in a general part of the hotel.

### Transfer of uncooperative individuals

It is recommended that a separate mode of transport to the hotel is provided for a person who is uncooperative/non-compliant. Ensure appropriate safety measures are taken (e.g. child locks on doors, a safety briefing for drivers, etc.).

If a person refuses testing for COVID-19 at a hospital and they are well enough to return to the hotel, they should be transported back to the hotel and treated as if they are COVID-19 positive (i.e. they must be situated on the COVID floor of the hotel and the necessary precautions taken). Every effort should be made to encourage them to get tested before this happens. However, they cannot be forcibly tested.

If a person refuses testing and treatment at a hospital and is too unwell to be released from hospital, a Human Biosecurity Control Order (HBCO) may need to be considered.

### Assessment at the hotel

All quarantined individuals will be given a survey to complete on the way to or at the hotel. This will include questions about past medical history, mental health history, allergies, medications, next of kin/emergency contact, dietary requirements, and other important health and welfare needs. A doctor and nurse will be available on site to urgently review anyone who reports illness or an urgent medical need on arrival at the hotel. Nurses will review the surveys and contact all individuals who are identified as having significant health needs, as soon as practicable. After initial phone contact is made, further assessment/management can be organised as needed.

## Initial information on options for accommodation

### Policy on separation of people in travelling parties to promote effective quarantine

There are a number of options for people – such a couple or family – for rooms to promote effective quarantine. Because a person needs to commence a further 14 days of quarantine when a person within a party or group is identified as positive for COVID-19, there should be an option to separate people – if they consent – at various points in the quarantine journey.

#### Option 1 – Parties stay together

A couple or family stay together and share a suite or room. If a person becomes positive, an extension of quarantine will be required on a tailored basis for the other persons.

#### Option 2 – Parties separate from the outset

A couple or family are separated from the outset. If a person becomes positive, the other parties do not need to recommence 14 days of quarantine.

#### Option 3 – Parties are separated once one person becomes positive

A couple or family separate into different rooms (with no contact thereafter) after a person becomes positive for COVID-19. The non-infected persons then start a new 14 day quarantine period, which is served at home once they complete the mandatory 14 day period in the hotel.

#### Option 4 – Parties stay together after one person becomes positive

The parties stay together. At the end of the 14 day period, they both leave to home isolation, and the non-infected persons commence a further 14 day quarantine period, as long as they separate in the house to which they go.

### Communication of these options to people in mandatory quarantine

The DHHS Team Leader should communicate these options to people at booking, with the default option being that parties stay together unless they indicate a preference to separate from the outset.

## Assessment during detention

Medical care should be available 24 hours a day to individuals in mandatory quarantine.

The need for medical care can be identified through the following channels:

- Via the daily welfare check (See Appendix 6- Welfare Survey)
- By the person contacting the concierge or nurse directly
- Nurse phone call to the individual
- The 1800 government services number (DJPR), the physical distancing hotline, the COVID hotline, or any other DHHS phone line
- Family members directly contacting the hotel/team/COVID quarantine inbox

Individuals in mandatory quarantine should be supported to contact their regular health care provider by phone or telemedicine if appropriate. In these instances, the healthcare provider should be provided with the contact details of the hotel nurse or GP so that the outcome of the assessment or management plan can be communicated with the medical team on site.

## Tiers of risk for people in mandatory quarantine for welfare checks

Individuals in mandatory quarantine will be triaged into three tiers of risk. The type of welfare check will depend on the tier the person falls into.

The following table is an initial framework for triaging the type and frequency of welfare check required:

**Table 1: Risk Characterisation for Welfare Checks**

| Risk Tier | Risk factors   | Welfare check type          |
|-----------|--|-----------------------------|
| Tier 1    | Residents with suspected or confirmed COVID-19<br>Families with children < 18 years<br>Passengers aged > 65 years<br>Aboriginal and Torres Strait Islander peoples<br>Residents with underlying comorbidities (e.g. respiratory or cardiac conditions)<br>Residents with a history of mental illness | Daily phone call            |
| Tier 2    | Those who indicate they require a phone call but do not have any other risk factors.<br>Residents who are by themselves.   | Phone call every second day |
| Tier 3    | Low risk – everyone else.  | Tailored contact            |

For phone calls (tier 1 and tier 2), translators must be available as needed. Language requirements should be recorded on arrival at the hotel and provisions made as required.

Individuals may be moved between risk tiers throughout their quarantine period as need dictates.

## Requirement for a welfare check

As part of the welfare check process, quarantined individuals should be provided with a satisfaction survey (available at **Appendix 6**) to complete each week. This satisfaction survey is more comprehensive than the regular daily welfare check. Any concerns raised on the survey should be escalated to the DHHS Team Leader for action.

Each individual in mandatory quarantine should receive a welfare check each day by a DHHS welfare officer (employee or contractor). A welfare check will allow people in detention to be assessed for medical and social issues. Concerns can be flagged and responded to. These issues include but are not limited to health, mental health, safety and family violence concerns. Referrals to the nurse, social supports, mental health and other services can be made as a result.

Welfare checks are made from the DHHS welfare call centre by a DHHS welfare officer – the script for these checks is in **Appendix 6**)

## Smoking

Smoking is not permitted within the hotel rooms. The following actions should occur:

- Nicotine Replacement Therapy should be promoted strongly for smokers;
- Smokers should be provided with the Quitline number to access telephone counselling - 13 78 48;
- People can also contact their regular general practitioner via telehealth for support;
- Smoking restrictions should remain in relation to the room;

- Only where absolutely necessary, and in exceptional circumstances, a person in mandatory quarantine could be granted permission to leave their room under specific circumstances where public health risk is managed:
  - The Authorised Officer is aware and grants permission;
  - They are accompanied by security, who are provided PPE to wear;
  - They are instructed to – and follow the instruction – not to touch surfaces en-route to the smoking area and coming back;
  - They return immediately to their hotel room.

### Fresh air and exercise

Individuals in quarantine should have access to fresh air where feasible.

- If the room has a balcony, ensure the residents can access it for fresh air.
- Advise residents to open windows/balconies where possible for fresh air and ventilation.
- If it is possible for residents to go outside to take some exercise for organised/supervised short periods of time, this should be facilitated where possible. Residents should ensure physical distancing is practised during this period. Only well residents from the same room should be able to go out to exercise at the same time.

Exercise is important for physical and mental health, particularly in the mandatory quarantine environment. Requests for exercise equipment / yoga mats should be facilitated where possible, but equipment should be thoroughly cleaned and disinfected after use. Resources for exercise routines and yoga/meditation should ideally be provided to individuals in mandatory quarantine upon request.

### Alcohol and drugs

Alcohol is permitted within hotels. Excessive alcohol consumption should be discouraged and should not be facilitated.

If there are concerns about alcohol or other substance abuse or withdrawal:

- Request nurse or medical review.
- Provide numbers for support services.
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.
- If there are concerns about acute alcohol withdrawal, confusion or mental state/mental illness, escalate for urgent medical review (consider calling 000).

**Note:** Alcohol should not be provided to persons who are under 18 years of age (including in the hotel room minibar).

### Nutrition and food safety (including allergies)

Individuals in quarantine should be provided with a well-balanced and plentiful diet, with options provided for those with specific dietary requirements.

- Ensure a well-balanced diet with options provided for those with specific dietary requirements.
- Ensure access to essentials within the room (e.g. snacks, tea and coffee) to limit the amount of interactions/contact required with hotel staff.
- Ensure access to additional food if required.
- Ensure that food allergies are recorded and communicated to the catering providers.

If there are substantial concerns that someone is not eating, this should be flagged with the medical team, and appropriate review/referral arranged (e.g. for mental health assessment).

### Food allergies

Individuals in mandatory quarantine should report all allergies in their initial health and welfare survey, and indicate if they are severe, have a history of anaphylaxis, or have been prescribed EpiPens. This must be filled out by every quarantined individual. If no allergies are reported, they should record "no known allergies". Dietary requirements should be carefully recorded and communicated to the catering providers. It is the responsibility of the welfare team to ensure that food safety arrangements are in place and that this information is communicated to the catering staff.

Some form of marking or sign on the door should be used to indicate a person in the room has a significant allergy as a safeguard.

### Food safety process

Food safety questionnaires (along with the welfare questionnaire) should be distributed to individuals at the airport. Individuals with specific dietary requirements (who are eligible for this process) should be contacted and advised of the process for self-organising suitable meals (through uber eats and by submitting a claim following their stay). Uber Eats Drivers should drop meals off at the hotel, and security staff should deliver the meals directly to the requestors' rooms. The Uber Eats Driver/Rider should not drop the delivery to the person's room directly.

Please refer to the following documents for further details:

- Process for people with food allergies (Appendix 9)
- Meal order information for people with allergies (Appendix 10)
- Food safety questionnaire (Appendix 11)

### Care packages

A public health risk assessment has been conducted that indicates that care packages, such as food or toys, can be delivered for provision to people in mandatory quarantine. The reason for quarantine is to prevent risk of COVID-19 transmission from people in detention to other parties and does not mean a person needs to be prevented from receiving packages.

The care package should be provided to the hotel reception or other party for conveyance to the person in mandatory quarantine and should not be directly handed to the person in quarantine by the person gifting the care package. Ensuring the package passes to the person in quarantine without misdirection or tampering is essential. There is no public health reason for inspection of any care package.

### Safety and family violence

If there are concerns about family violence / the safety of women and children the following must occur:

- Arrange for separate rooms for the person to be assessed and access phone support services (separate rooms may also be indicated for the remainder of the quarantine period)
- Refer to CART
- Refer to phone support services
- Engage case worker to contact person and make an assessment
- Ensure the affected person has access to contact Victoria Police to report family violence or other safety concerns, if they chose

### Social and communications

- All residents should have access to **free** wifi/internet.

- All residents should have access to entertainment such as television and streaming services (e.g. Netflix).
- All residents should have access to communications so that they can keep in regular contact with family and friends throughout the quarantine period.
- Toys and equipment should be provided for small children if possible.

### Requests for exemption from mandatory quarantine

The types of situations where an exemption from mandatory quarantine is generally granted include:

- Unaccompanied minors in transit to another state
- Unaccompanied minors where a parent or guardian does not agree to come into the hotel
- Foreign diplomats coming into the country
- ADF staff travelling for essential work
- People with a terminal illness
- People whose health and welfare cannot be safely accommodated in a hotel environment (eg mental health or require in-facility health treatment)
- People who are transiting directly to another country (and who do not need to travel domestically first)
- Air crew
- Maritime workers who have come off a boat and will be leaving by boat
- Maritime workers who have come off a plane and will be leaving by boat within the quarantine period

In the above circumstances the passenger will either a) be released from quarantine if they were already detained or b) will be required to complete quarantine in another location (at home or in another facility) and be subject to quarantine monitoring and penalties.

### Negative permission/exemption outcomes

When a person submits a request for release from detention (temporary or permanent) that is denied/declined, a CART team support worker should be present (on the phone) to provide support (if the person consents to this, and if CART are already working with the person).

- The CART team can support the person before and after the exemption discussion with the doctor which is a separate discussion, in anticipation of some emotional distress upon hearing the outcome.
- The CART worker can help the person gain insight into the public health risk, understand the information they are receiving, and provide insight into what they can and can't do whilst they remain a public health risk.
- This will also inform the doctor/nurse and CART team of further risk management and support required for the person going forth.

### Temporary leave from mandatory quarantine

Permission for temporary leave from mandatory quarantine in hotels may be granted in the following circumstances:

- Attendance at a funeral
- Medical treatment
- Seeing family members who are about to pass away
- Smoking breaks where people are suffering extreme anxiety and where it is safe to do so from a public health and infection control perspective- see 'Smoking' above
- Exercise breaks for those suffering extreme anxiety and where it is safe to do so

Where health and welfare issues exist in any of the above cases, particularly in the case of extreme anxiety, the on-site health staff will assess individual and assist in providing recommendations as to the most appropriate supports for the individual.

### Assessment in preparation for exit

All persons departing mandatory quarantine will be offered a health check with a nurse 24-48 hours prior to exiting. This health check is voluntary. This will consist of questions about symptoms of COVID-19 and a temperature screening.

If a person screens positive on the health check:

- They will not be detained longer than the 14 day mandatory quarantine period
- A swab will be sent and they will be informed that they need to self-isolate after exiting, until the result of the swab is known
- If they do not have appropriate accommodation to self-isolate after release, they will be assisted to find such accommodation

If a person screens negative on the health check, no further action will be taken.

## Infection control and hygiene

### COVID floors/hotels

Each hotel should have a COVID-19 positive floor or area (a "RED ZONE"). Any person who is a confirmed case should be relocated to this area of the hotel when the test result is known. Appropriate signage, PPE and other consumables should be available at the entrance to this area of the hotel. Where there are large numbers of confirmed cases arriving on a flight, a COVID hotel may be considered. Where the infrastructure allows, suspected cases may also be moved to an area of the hotel away from well individuals.

### Personal protective equipment

A supply of P2/N95 masks and gowns should be maintained, in addition to single-use face masks and gowns. PPE stocks should be checked regularly by the DHHS Team Leader/ manager, and urgently requested if needed. Regular stocktake should be undertaken to pre-empt additional orders.

PPE should be available at the hotel. Biohazard bags for waste disposal, and hand hygiene stations, should be available at the doffing section of the hotel.

PPE protocols should be available to all staff working in the hotels, so that there is clear instruction on what type of PPE to wear and in what circumstances, how to don and doff it, and how to dispose of it.

See Appendix 5- PPE advice for hotel-based healthcare workers

### Laundry

Staff may wear PPE when handling dirty laundry. Laundry should be washed on the highest possible setting and thoroughly dried before use. Staff should not overly handle the linen – it should be put straight into the washing machines. Staff should follow hand hygiene procedures after handling dirty linen.

## Cleaning

Though not directly medical care, all quarantined individuals have the right to a safe and comfortable room and environment. Quarantined individuals may not be able to upkeep their rooms for various reasons, which may affect their physical and mental health. If cleaning cannot be regularly provided, all efforts should be made to assist the quarantined individual with cleaning their room. In rare instances the quarantined individual may need to be moved out of the room, and staff don full PPE to provide a rapid cleaning of the room. This should only occur in rare instances where the quarantined individual is not capable of doing so themselves. Any persons for whom there is a concern about room hygiene and safety should be flagged to the team leader.

Please refer to the department document 'Cleaning and disinfecting to reduce COVID-19 transmission'.

Housekeeping services will not be provided routinely to residents. Fresh linen, towels and additional amenities can be left outside of rooms for residents to then collect. Biohazard bags can be left for residents to place dirty linen in and to leave outside their rooms for collection. Terminal cleaning is required on vacation of each room. Rooms that have been vacated will not be repurposed during the quarantine period.

## Room sharing

### Well persons

In instances where two or more well people who are not suspected or confirmed cases of COVID-19 wish to share a room in advance of check-in at the hotel, this can be facilitated. However, they should be informed that sharing a room may have implications for the amount of time they are required to quarantine (although not their mandatory detention period) should their roommate become a confirmed case.

If a request to share a room is made after an initial period in separate rooms, they should be informed that this may increase their risk of infection with COVID-19 if the other person is incubating the infection, and that COVID-19 infection may result in serious illness and death in some cases. They should also be informed, as above, that such an arrangement may have implications for the amount of time they are required to quarantine for if their roommate goes on to develop infection. If the persons still insist, then it must be documented in the Dynamic CRM Database that the risks have been discussed with them (e.g. by a nurse), before facilitating this request.

### COVID discordant couples

In instances where one person in a room share situation is identified as a confirmed case and the other person is asymptomatic or has a negative COVID-19 test, the confirmed case should self-isolate in a separate room away from the person who does not have COVID-19. The 14-day quarantine period (but not the mandatory detention period) for the COVID-negative person starts from their last contact with the confirmed case during the confirmed case's infectious period. This may mean that they need to self-quarantine for an additional number of days after the mandatory detention period ends, but they may do this in their own home or in alternate accommodation, not in detention. The self-isolation arrangements for the confirmed case are outlined in the section below ("Exit arrangements for confirmed COVID-19 cases").

# COVID-19 in people in mandatory quarantine

## Actions for confirmed cases of COVID-19 in people in mandatory detention

### Overall actions

The following actions should be taken:

- Residents with confirmed COVID-19 should be accommodated / cohorted in a separate section/floor of the hotel, away from the non-COVID-19 infected passengers → the **RED ZONE**.
- A designated COVID-19 hotel should be available when there are large numbers of cases coming off flights (e.g. high risk repatriation flights with a high burden of suspected or confirmed COVID-19).

### Personal protective equipment (PPE)

See Appendix 5- PPE advice for hotel-based healthcare workers

Staff who engage with monitoring or assisting persons in mandatory detention in person should:

1. Apply standard infection prevention and control precautions at all times:
  - a. maintain 1.5 metre distance
  - b. wash your hands or use anti-bacterial agents frequently
  - c. avoid touching your face.
2. Every situation requires a risk assessment that considers the context and client and actions required.
3. If you are not able to maintain a 1.5 metre distance and the person has symptoms (for example coughing) or is known to be a COVID-19 case use:
  - a. fluid-resistant surgical mask (replace when moist or wet)
  - b. eye protection
  - c. disposable gloves.
4. If you need to be in a confined space (<1.5 metre) with a known COVID-19 case for more than 15 minutes, wear a single use facemask, eye protection and gloves.

### Current infectious cases

- In the situation that an arriving passenger is a current infectious case of COVID-19, they will still be handed the detention notice and will be placed in mandatory quarantine.
- They will be given a single use face mask to wear and will be kept separate from the other passengers.
- At the hotel, they will be asked to provide confirmation of their diagnosis. If there is any doubt surrounding the certainty of the diagnosis of COVID-19, they may be tested again.

### Recovered cases

- In the situation that an individual states that they are a confirmed case of COVID-19 and have recovered from the infection, they will still be handed the detention notice and placed in mandatory quarantine.

- The onus on the individual to provide the evidence that they have a confirmed case of COVID-19 and the required amount of time has passed such that they are no longer considered infectious.
- The department will decide on a case-by-case basis whether evidence from other sources (from testing done overseas) can be considered sufficient proof to inform clinical and public health decision-making.
- If they meet the criteria for release from isolation (see below) and the testing and medical reports provided are considered sufficient by the department, they may be considered for release from detention.
- They will still be handed the detention notice until this can be verified and the request has been approved.

Note – there are no automatic exemptions for persons who are recovered cases. These requests need to be assessed on a case-by-case situation.

## Release from isolation

### Criteria for release from isolation

Confirmed cases of COVID-19 will be considered for release from mandatory quarantine, once they meet the department's criteria for release from isolation of a confirmed case:

- the person has been afebrile for the previous 72 hours, and
- at least **ten days** have elapsed after the onset of the acute illness, and
- there has been a noted improvement in symptoms, and
- a risk assessment has been conducted by the department and deemed no further criteria are needed

Clearance testing is not required for release from isolation, either in the home or in mandatory quarantine.

### Process for release from isolation

As per the DHHS guidelines for health services and general practitioners (see <https://www.dhhs.vic.gov.au/health-services-and-general-practitioners-coronavirus-disease-covid-19>), the department will determine when a confirmed case no longer requires to be isolated in mandatory quarantine, hospital or in their own home.

- Every confirmed case that is diagnosed in Victoria is notified to the department, and assigned a case and contact officer (CCO), regardless of whether they are diagnosed in detention or outside of detention. Every confirmed case receives daily contact from the case and contact team.
- The CCO will advise when it is appropriate for consideration for release from isolation, and will issue a clearance certificate (via email) to [COVID.quarantine@dhhs.vic.gov.au](mailto:COVID.quarantine@dhhs.vic.gov.au) for the case when they meet the criteria for release from isolation.

Nurses looking after confirmed cases in detention should temperature check and review symptoms of confirmed cases daily. The date of acute illness onset should be clearly documented in their records.

If a confirmed case is due for release from mandatory quarantine but does not yet meet the department's criteria for release from isolation, they will not be detained longer than the 14-day quarantine period. They will be released from detention at the agreed time, but will be subject to the Isolation (Diagnosis) Direction and should be assisted to self-isolate at home or in another suitable premises in Victoria until they meet the required criteria. A premises is considered suitable if it has a facility/room where the person can be isolated so as not to cause undue a risk for another householder (i.e. not a hostel or dormitory accommodation). They will be given a single-use face mask to wear when checking-out from the hotel and in transit to their next destination. They will be provided with a 'confirmed case' information sheet.

## Exit planning for individuals with confirmed COVID-19

### Non-emergency ambulance transport

When a confirmed case of COVID-19 who is considered still infectious but is stable is assessed as appropriate for transition to isolation in their home, Ambulance Victoria will be requested by the DHHS Team Leader for mandatory quarantine to provide non-emergency patient transport for that person to a destination in Victoria that is the assessed appropriate home isolation location.

If there are multiple persons to be transitioned to home isolation on the same day, subject to compliance-related logistics being able to be handled and any privacy considerations being met, it is permissible for two or more potentially infectious confirmed cases of COVID-19 to be transported together in one NEPT, i.e. to cohort confirmed cases

### Exit arrangements

The following table documents the exit management plans for quarantined individuals in different scenarios.

| Scenario   | Exit plan   |
|--|---|
| Well person who has served 14 days of quarantine   | <ul style="list-style-type: none"> <li>Can leave – gets end of detention notice (universal version).</li> </ul>   |
| Confirmed case of COVID-19 who has met criteria for release from isolation (i.e. is declared no longer infectious)                                   | <ul style="list-style-type: none"> <li>Can leave – must not be prevented from leaving if the AO is aware they are cleared and the person demands to leave – they are non-infectious and therefore not a public health risk.</li> <li>Gets clearance from isolation letter from PHC (as per Isolation (Diagnosis) Direction).</li> </ul>   |
| Confirmed case of COVID-19 who is still potentially infectious and has been in detention less than 14 days   | <ul style="list-style-type: none"> <li>Must stay in detention.</li> </ul>   |
| Confirmed case of COVID-19 who is still potentially infectious but has reached the end of their 14 day detention period                              | <ul style="list-style-type: none"> <li>Can leave detention but is now subject to the Isolation (Diagnosis) Direction.</li> <li>Safe travel should be arranged by the authorised officer at the hotel via the Operations Soteria EOC to place of home isolation in Victoria (mask, stay separate, go straight to home; but preferred travel by non-emergency patient transport with PPE'd ambulance officers)</li> <li>Not permitted to travel interstate or to fly domestically but no detention order is needed to prevent that (in keeping with all other confirmed cases)</li> <li>If no place to isolate, DHHS should keep person in hotel voluntarily to reduce risk until cleared, or until safe home isolation environment identified</li> </ul> |
| Well close contact of a confirmed case of COVID-19 (i.e. roommate at hotel), where the roommate has reached the end of their 14 day detention period | <ul style="list-style-type: none"> <li>Case and Contact Sector to do assessment, assign a new 14 day period (from date of last contact with infectious case) and issue a requirement to quarantine until that 14 days ends – factsheet, lodge new date in PHESS, reverting person to effective close contact status</li> </ul>  |

|  |  |
|--|--|
|  | <ul style="list-style-type: none"> <li>• No detention order required, and no legal order preventing flying, but must be advised by case and contact management sector not to fly and that they need to quarantine</li> <li>• If lives interstate, the authorised officer at the hotel can arrange via the Operations Soteria EOC a hotel if a person would otherwise be homeless.</li> </ul> |
| Symptomatic suspected case of COVID-19 who has reached the end of their 14 day detention period. | <ul style="list-style-type: none"> <li>• Allowed to leave detention safely (mask, separate; ideally NEPT transport to home isolation).</li> <li>• EOC should follow-up result to convey result (as DHHS oversaw this testing so is obliged to follow-through).</li> </ul>  |

DRAFT

## Exit arrangements for suspected cases

- Any suspected case of COVID-19 who is in mandatory quarantine who has reached 14 days from the start of their mandatory quarantine period (midnight) may leave and should be assisted to safely isolate in a safe environment until COVID-19 is excluded.
- Any suspected case of COVID-19 who is in mandatory quarantine who has NOT reached 14 days from the start of their mandatory quarantine period (midnight) needs to remain in mandatory quarantine.

## Reporting / escalating concerns

### Principles

- Decisions about medical care should be left to the nurses and doctors and should not be determined by any other staff.
- In any emergency situation, the priority is to call 000 before notifying any other managing or governing figure.
- If there is any doubt over whether an issue or concern should be escalated to senior management, escalate the concern.

### Clinical escalation

This is described in **Appendix 3- Clinical escalation/referral pathway.**

### Escalation for mental health concerns

#### Chain of escalation for mental health concerns and issues

The following table indicates the chain of escalation for concerns about the mental health of people in mandatory quarantine.

| Situation   | Responded to by  | Escalated to                              | Reported to  |
|---|--|---|--|
| Non-urgent mental health concern                              | Nurse or GP<br>Regular healthcare provider by telemedicine   | Mental health nurse<br>Psychiatric triage | Medical lead<br>General practitioner                           |
| Repeated mental health concerns / acute mental health concern | Mental health nurse or GP, urgent review<br>Psychiatric triage urgent review<br>Daily physical welfare review thereafter | Ongoing mental health nurse management    | Welfare lead<br>Medical lead<br>Compliance lead                |
| Risk of self-harm / serious mental health concerns            | Immediately phone 000 → Emergency Department<br>Call GP/nurse to attend urgently   | Emergency inpatient tertiary care         | Welfare lead<br>Team leader<br>Medical lead<br>Compliance lead |

|  |  |  |                                |
|--|--|--|--------------------------------|
|  |  |  | Deputy Public Health Commander |
|--|--|--|--------------------------------|

### Specific events to escalate

The following mental health-related events or situations should lead to an escalation to the Deputy Commander - Welfare at EOC who will also notify the Deputy Public Health Commander:

- A person identified as high risk for mental health concerns due to a past history, medication or recent bereavement;
- Detainees with suicide or homicide risk or recent psychosis;
- Any instances where physical or chemical restraint have been required.

### Escalation for medical reasons

An escalation flowchart is at **Appendix 3**.

### Nurse or doctor to escalate

In the following circumstances, the nurse / general practitioner should call the DHHS Team Leader:

- There is any practical issue arising from the medical consultation that needs the assistance of DHHS;
- A patient needs to access an alternative medical or welfare service such as mental health nursing, a medical specialist or acute hospital care;
- A patient needs to be admitted to hospital in an emergency;
- A patient has suffered any form of life-threatening injury or health event;
- A patient has died.

### DHHS Team Leader to escalate

The following concerns or events must be escalated by the DHHS Team Leader to the Deputy Commander - Welfare at EOC within one hour during business hours, or Operation Soteria Deputy Commander Reception after hours, who will also notify the Deputy Public Health Commander within two hours:

- A person identified as high risk for mental health concerns due to a past history, medication or recent bereavement;
- Detainees with suicide or homicide risk or recent psychosis;
- Any instances where physical or chemical restraint have been required;
- A serious act of non-compliance;
- An acute medical deterioration;
- Any hospital admission or emergency transfer to hospital;
- A serious risk to the health and safety of a person in mandatory quarantine (or a staff member);
- Serious illness/harm/injury (including assault) to a person in mandatory quarantine;
- A severe allergic reaction (anaphylaxis);
- A death.
- An unauthorised absence from mandatory detention (a missing person)
- A fire or other emergency in a hotel;
- A potential outbreak of COVID-19 or another infectious disease

See also Appendix 4- **Chain of command re detainee with physical/mental health issue**

## Daily health and welfare report to Public Health Commander

A daily health and welfare report should be provided to the Deputy Public Health Commander for Physical Distancing by the Deputy Commander Welfare. This is to ensure oversight and accountability for the mandatory quarantine process. This report should include but is not limited to the following:

- Total number of people in mandatory detention
- Total number of confirmed COVID-19 cases (cumulative and new)
- Total number requesting exemptions to leave mandatory quarantine (temporary and permanent)
- The number of persons in mandatory detention receiving:
  - A nurse review
  - A mental health assessment
  - A GP review
  - Referral to hospital
  - A 000 call
- The number of persons awaiting:
  - A mental health assessment
  - A GP review
- The number of persons in the following groups:
  - Significant psychiatric history - mild/moderate/severe mental health issues (as per the risk stratification)
  - Serious/life-threatening medical conditions (e.g. anaphylaxis, stage 4 cancer)
  - Age < 16 years or > 70 years
  - Pregnant women
- The number of calls from the hotels to:
  - 000
  - VicPol
  - Other DHHS phone lines
- The number of risk incidents logged in the database.
- Other major concerns flagged.

## Audit

### Healthcare audit

Medical care provided by doctors and nurses contracted by DHHS will be audited regularly. This should be reported to the EOC Commander and Deputy Public Health Commander. The audit process may consist of, but is not limited to, the following:

- Assessing waiting times for delivery of care;
- Record-keeping and review of medical records;
- Medical care satisfaction surveys;
- Number of repeat requests for medical care/escalation;
- Number of risks reported;
- Feedback from authorised officers and other organisations involved/staff.

### Welfare audit

Audit of welfare procedures should be performed by the Welfare Lead at the EOC on a regular basis. The audit process may consist of:

- Review of weekly satisfaction surveys;
- Feedback from staff;
- Audit of welfare check calls (review of a sample of recorded calls).

Appendix 5- PPE advice for hotel-based healthcare workers

PPE advice for hotel-based healthcare worker (HCW) for contact with COVID-19 quarantine clients

Adapted from: Infection Prevention Australia

Note: P2 or N95 masks are only recommended for use when aerosol generating procedures are being undertaken or will occur. In all other instances don a surgical face mask for direct client contact.

Recommended HCW PPE use according to type of activity and client COVID-19 symptomology

| Setting  | Target personnel or patients or clients | Activity   | Type of PPE or procedure   |
|--|---|--|--|
| Hotel quarantine floor<br><br>Not entering the client/s room or having direct contact with client/s. | Health care worker                      | Telephone or online triage to check for recent change in condition or development of symptoms. No direct client contact. | No PPE   |
|  | Health care worker                      | Any visit  | Maintain physical distance of at least 1.5 meters. When physical distance is not feasible and yet no patient contact, use surgical face mask and eye protection. |

| Setting   | Target personnel or patients or clients   | Activity  | Type of PPE or procedure  |
|---|---|---|---|
| <b>Perform hand hygiene before and after every client contact</b>   | Patients <u>with symptoms</u> suggestive of COVID-19 (e.g. cough, fever, shortness of breath) | Doorway indirect contact by HCW   | <u>Surgical face mask</u><br>Eye protection<br>Gown<br>Gloves<br>Request client/s to wear surgical face mask if tolerated and remind client to perform hand and respiratory hygiene   |
|   | Patients/clients <u>without symptoms</u> suggestive of COVID-19                               | Doorway indirect contact by HCW (e.g. taking electronic temperature)                              | <u>Surgical face mask</u><br>Eye protection<br>Perform hand hygiene and have the patient/client perform hand hygiene and wear a <u>surgical face mask</u>   |
| <b>Client/s room</b><br><b>Entering the client/s room</b>   | Patients <u>with symptoms</u> suggestive of COVID-19 (e.g. cough, fever, shortness of breath) | Providing direct care or any close contact in the <u>absence</u> of aerosol generating procedures | Ask client/s to wear a surgical face mask if tolerated<br><u>Surgical face mask</u><br>Gown<br>Gloves<br>Eye protection (goggles or face shield)  |
| Examples of aerosol generating procedures include:<br>Collecting nasopharyngeal swabs<br>Cardiopulmonary resuscitation<br>Nebulisation of medication<br>Intubation<br>Suctioning airways<br><br><b>Perform hand hygiene before and after every client contact</b> | Patients/clients <u>without symptoms</u> suggestive of COVID-19                               | Providing direct care or any close contact in the <u>absence</u> of aerosol generating procedures | Ask client/s to wear a surgical face mask if tolerated<br><u>Surgical face mask</u><br>Gown<br>Gloves<br>Eye protection (goggles or face shield)  |
|   | Any client - confirmed or unconfirmed COVID-19 case   | Providing direct care to in the <u>presence</u> of aerosol generating procedures                  | <u>Respirator N95/P2 standard</u><br>Gown<br>Gloves<br>Eye protection<br>Maintain physical distance of at least 1.5 meters.<br>Ask client/s to wear a <u>surgical face mask</u> if tolerated<br>Immediately move the client to an separate room or separate area away from others; if this is not feasible, ensure spatial distance of at least 1.5 meters from other household/room members.<br>Perform hand hygiene and have the patient perform hand hygiene |

**Isolation** is used to separate ill persons who have an infectious disease from those who are healthy (e.g. tuberculosis and confirmed COVID-19 cases).

**Quarantine** is used to separate and restrict the movement of well persons who may have been exposed to an infectious disease to see if they become ill (e.g. returned travelers, cruise line crew and passengers).

**Compliance & Welfare Management System (applies to Welfare Survey below)**

Release Notes: 17/04/2020

The following is a summary of key changes included this release:

|   | Area           | Change   | Application               |
|---|----------------|--|---------------------------|
| 1 | Welfare Survey | Change made to wording and flow of existing health question: <ul style="list-style-type: none"> <li>“Have you been seen by a nurse today?”<br/>– default: NO, if the answer is yes, then it pops up a box: “reason why”</li> <li>“Have you been seen by a nurse on another day?”<br/>– default: NO, if the answer is yes, then it pops up a box: “reason why”</li> </ul>                           | Welfare Management System |
| 2 | Welfare Survey | Change made to an existing health question: <ul style="list-style-type: none"> <li>“Are you a lone occupant in your hotel room?”</li> </ul> <p>Sibling and Other (eg. Friend) are now selectable options.</p>  | Welfare Management System |
| 3 | Welfare Survey | Change made to an existing health question: <ul style="list-style-type: none"> <li>“Have you or your fellow occupants had any signs or symptoms of COVID-19, including fever, cough, shortness of breath, chills, body aches, sore throat, headache, runny nose, muscle pain or diarrhoea?”</li> </ul> <p>A text field has been added to notes, in addition to the current selectable options.</p> | Welfare Management System |
| 4 | Welfare Survey | Change made to an existing final question: <ul style="list-style-type: none"> <li>Existing questions “Do you have any other needs that we may be able to help you with?”, “Do you have any other concerns” have been merged to one question.</li> </ul> <p>“Do you have any other needs or concerns that we may be able to help you with?”</p>   | Welfare Management System |
| 5 | Welfare Survey | Change made to wording of existing health questions: <ul style="list-style-type: none"> <li>“Do you, or anyone in your group (including children) have any immediate health concerns?”</li> <li>“What sort of things that help you to live well every day before COVID-19? For example, do you exercise every day, do you eat at the same time every day?”</li> </ul>                              | Welfare Management System |
| 6 | Welfare Survey | Change made to wording of an existing wellbeing question: <ul style="list-style-type: none"> <li>“What kind of things have you been doing to occupy yourself while you’re in quarantine, e.g. yoga, reading books, playing games, playing with toys?”</li> </ul>   | Welfare Management System |

### Script

Good morning / afternoon, I'm XXX. Can I confirm who I'm speaking with?

|  |
|--|
|  |
|  |

I am working with the Department of Health and Human Services to support people in quarantine following their arrival in Australia, and I'm giving you a call to check on your welfare. We know that this may be a stressful time for you, and our aim is to make sure that you are as comfortable as you can be during this quarantine period.

I am a Victorian Public Servant and any information that you provide to me is subject to privacy legislation.

We will be checking in with you and the people you have been travelling with every 24 hours to make sure that you are ok and to find out if you have any health, safety or wellbeing concerns that we can address.

There are 23 questions in total, and it should take only a few minutes to go through these with you.

When you answer, we would like to know about you as well as any other occupants in your room.

If you have needs that require additional support, we will connect you with another team who can provide this support.

### Introductory questions

1. Are you still in Room XXX at the hotel? Circle YES / NO

|  |
|--|
|  |
|  |

2. Are you a lone occupant in your hotel room? Yes/No if No:

5. Who are your fellow occupants, including your partner or spouse, children or fellow travellers?

| Name | Relationship | Age (children/dependents) |
|------|--------------|---------------------------|
|      |              |                           |
|      |              |                           |

3. Have you or your fellow occupants had to leave your room for any reason? If so, what was the reason? YES /NO

|  |
|--|
|  |
|--|

|  |
|--|
|  |
|  |
|  |

**Health questions**

4. Have you had contact with a medical staff nurse whilst in quarantine? If yes, can you please provide details and is it being monitored?

|  |
|--|
|  |
|  |

5. Have you or your fellow occupants had any signs or symptoms of COVID-19, including fever, cough, shortness of breath, chills, body aches, sore throat, headache, runny nose, muscle pain or diarrhoea)?

|  |
|--|
|  |
|  |

6. Do you or anyone you are with have any medical conditions that require immediate support? (ie smokers requiring nicotine patches)

|  |
|--|
|  |
|  |

7. Do you, or anyone in your group (including children) have any immediate health or safety concerns?

|  |
|--|
|  |
|  |

8. Do you have any chronic health issues that require management?

|  |
|--|
|  |
|  |
|  |

9. Do you or anyone you are with have enough prescribed medication to last until the end of the quarantine period?

|  |
|--|
|  |
|  |

10. Are you keeping up regular handwashing?

|  |
|--|
|  |
|  |

11. What sort of things help you to live well every day? For example, do you exercise every day, do you eat at the same time every day?

|  |
|--|
|  |
|  |
|  |

**Safety questions**

12. How is everything going with your family or the people you are sharing a room with?

|  |
|--|
|  |
|  |
|  |

13. Is there anything that is making you feel unsafe?

|  |
|--|
|  |
|  |
|  |

14. Are there any concerns that you anticipate in relation to your own or other occupant's safety that might become an issue in the coming days?

|  |
|--|
|  |
|  |
|  |

*If the person answers yes to either question 10 or the one above, you could say:*

1. You have identified safety concerns -would you like me to establish a safe word if you require additional support regarding your safety?

If yes...

2. The word I am providing is <xxx> (different word for each individual). You can use that word in a conversation with me and I will know that you need immediate support/distance from other occupants in the room or may be feeling a high level of distress.

*Where family violence, abuse or acute mental health is identified as an issue refer to specific guidance / escalate for specialist support.*

#### **Wellbeing questions**

15. How are you and any children or other people that you are with coping at the moment?

|  |
|--|
|  |
|  |

16. Do you have any immediate concerns for any children / dependents who are with you?

|  |
|--|
|  |
|  |

17. Do you have any additional support needs that are not currently being met, including any access or mobility support requirements?

|  |
|--|
|  |
|  |

18. Have you been able to make and maintain contact with your family and friends?

|  |
|--|
|  |
|  |

19. What kind of things have you been doing to occupy yourself while you're in isolation, e.g. yoga, reading books, playing games, playing with toys?

|  |
|--|
|  |
|  |

20. Have you been able to plan for any care responsibilities that you have in Australia? Can these arrangements be maintained until the end of the quarantine period?

|  |
|--|
|  |
|  |

**Final**

21. What has the hotel's responsiveness been like? Have you had any trouble getting food, having laundry done, room servicing etc.?

|  |
|--|
|  |
|  |

22. Do you have any other needs that we may be able to help you with?

|  |
|--|
|  |
|  |

23. Do you have any other concerns?

|  |
|--|
|  |
|  |

**End of survey**

Thank you for your time today. We will contact you again tomorrow.

**Office use only**

8. Referral details

|                           |  |

DRAFT

## Transfer Medically Unwell Individuals Under CoVid19 Isolation to RCH/Alfred Hospitals

Nurse identifies patient requiring transfer to hospital.  
Patient has developed ANY CoVid19 symptom  
(Fever, Sore Throat, Cough, Fatigue, Shortness of Breath)  
and has become medically unwell or  
developed any other problem that may require hospitalisation

If non-urgent contact DHHS  
If URGENT to directly contact the Admitting Officer at  
**REDACTED**  
Inform hospital of patient and details  
000 Ambulance request warning of potential CoVid19 case

Ambulance Transfer to RCH/Alfred  
Staff PPE: Gown, Gloves, P2/N95 mask, eye protection  
Patient PPE: Surgical Mask

Patient Transfer from Ambulance to Hospital  
Transfer Requirements:  
- All relevant staff must be notified prior to transfer  
- Patient transferred on trolley or bed  
- Clear transfer pathway of patients, visitors, staff

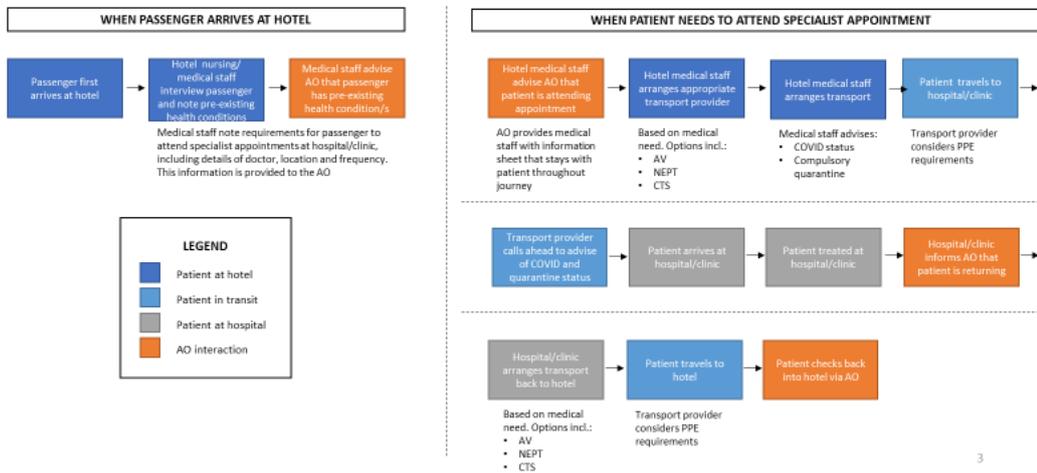

PPE  
**Staff:** Gown, Gloves, P2/N95 mask, eye protection  
**Patient:** surgical mask

Arrival at Hospital designated CoVid19 AV Reception area

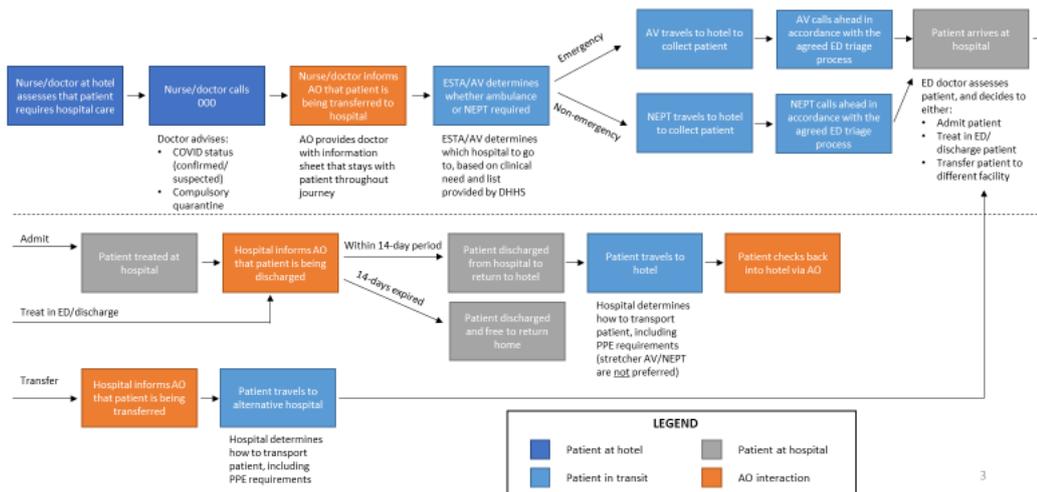

Patient managed under routine AIRBORNE & CONTACT  
transmission based precautions in a negative pressure room

Routine AIRBORNE & CONTACT transmission based precautions  
include: **PPE:** Gown Gloves, P2/N95 mask, eye protection  
(when entering isolation room or transporting patient)  
**Patient:** Surgical mask – if leaving isolation room

## Process to transfer passengers to hospital (planned)

## Process to transfer passengers to hospital (unplanned)

DRAFT

## Appendix 9- Process for people with food allergies

COVID-19 – Hotel isolation:

Process for people with food allergies

Upon arrival at Melbourne Airport, passengers will be provided with two questionnaires that must be completed and handed in to DHHS staff at the hotel on arrival. These questionnaires are:

- Welfare questionnaire
- Food safety questionnaire

For airport staff

Please ensure that arriving passengers are provided with both forms and are instructed to complete one form for every passenger prior to arrival at their hotel.

For hotel staff

Passengers arriving at the hotel will be in possession of two completed questionnaires and these should be handed in to DHHS Team Leader at the hotel on arrival:

- a welfare questionnaire
- a food safety questionnaire

The DHHS Team Leader will liaise with the hotel and request 3 copies of each questionnaire for distribution to the following:

- o The ED Nurse at the hotel
- o The hotel
- o The Authorised Officer at the hotel
- o The original should be kept by the DHHS Concierge Team Leader

Food Safety Questionnaire - IMPORTANT

DHHS Team Leaders should check all Food Safety questionnaire forms and identify those where a person has answered 'Yes' to Question 1 or 4. In these cases the individual should be contacted and advised that we cannot guarantee the dietary needs can be met by the hotel and therefore the department asks that the guest

purchase food consistent with their dietary needs using the Uber Eats online service. The DHHS Team Leader will also advise the hotel Duty Manager regarding the arrangement so they can coordinate this with the hotel kitchen.

Individuals are permitted to purchase meals up to the value of:

- \$20 per meal for breakfast
- \$25 per meal for lunch
- \$40 per meal for dinner.

Guests who are advised to purchase meals through Uber Eats must be advised to purchase meals using their own funds but retain receipts for all purchases to enable reimbursement by the Victorian Government. They should be provided with the reimbursement form at Attachment A and advised to return this form to the Department of Health and Human Services within 60 days of the end of their isolation period at the hotel. Only people who answer 'Yes' to Question 1 or 4 on the Food Safety questionnaire are permitted to purchase food in this way, and have it paid for by the department.

Under individual arrangements at hotels, other individuals may be permitted to purchase meals through an outside service if the hotel kitchen is unable to fulfil their specific dietary needs. In these cases however, the guest will not be reimbursed for the cost of the meal.

The Department of Justice, Precincts and Regions has put in place arrangements across all hotels to permit Uber Eats drivers to deliver food to the hotel and for security staff to assist in the delivery of meals to rooms.

Reconciliation of reimbursement forms will be made against the Food Safety questionnaire when receipts are received to ensure only those eligible for reimbursement will be reimbursed.

#### Questions

Why not pay direct to a DHHS set-up account?

- There is a risk that the account details will be released beyond those authorised to use it and significant purchases will be made using the department's account. There is no way to control purchases once this account number gets out and if the purchasing becomes excessive the only control would be to shut the account down.

Why not have the Concierge Team Leader make the purchases on behalf of people?

- There is no way of knowing the volume of people who may need to book through Uber Eats and therefore the logistical demands on Team Leaders may simply be too large to effectively manage.

- Concierge Team Leaders may be held unfairly responsible for any errors that may be made in purchases. Responsibility for correct purchasing should remain with the individual consumer.

Bank Account details (for reimbursement purposes):

BSB Number:

Account Number:

Banking Institution:

Account Name:

Please ensure you attach original receipts for all purchases included on this form as reimbursement cannot be provided without receipts. The completed form with attached receipts must be sent to the following address within 60 days of the conclusion of your stay in the hotel:

Emergency Management Branch

Department of Health and Human Services

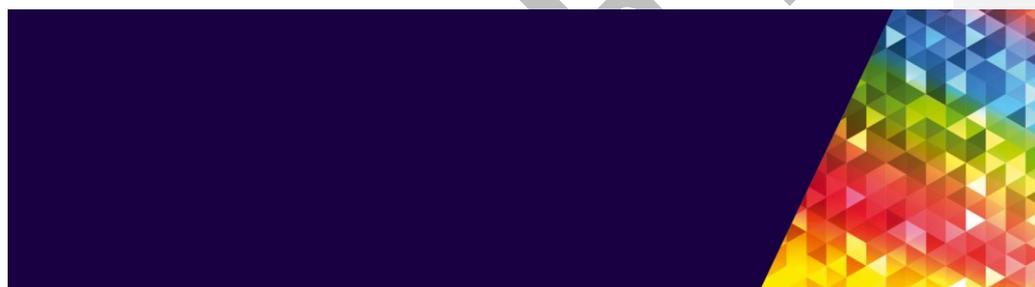

Level 16, 50 Lonsdale Street

Melbourne, 3000

## Appendix 10- Meal order information for people with food allergies

### COVID-19 – Hotel isolation:

#### Meal order information for people with food allergies

Thank you for completing the Food Safety questionnaire form and advising the department of your food allergy.

The hotel and government cannot guarantee that your dietary needs can be met by the hotel. Those with food allergies will need to purchase food consistent with their dietary needs using the UberEats online service, as suitable hotel catering will not be available.

This information sheet will provide you with information about how to order meals through UberEats, the amounts reimbursable for meals and the process for reimbursement. **Please note that you will be responsible for purchasing meals that meet your dietary requirement and the hotel and government accept no liability if the meals do not meet those requirements.**

The DHHS Team Leader will advise the hotel Duty Manager regarding this arrangement so they and the hotel kitchen are aware you will be sourcing your own meals.

To make an order through UberEats, download the application on the Apple store (for iPhone) or Google Play store (for Android). Create your account and place your order as appropriate. Issues with the app can be supported through UberEats customer support line - 1300 091 272.

Guests are permitted to purchase meals up to the value of:

- \$20 per meal for breakfast
- \$25 per meal for lunch
- \$40 per meal for dinner.

Guests who will be purchasing meals through Uber Eats must purchase meals using their own funds but **retain receipts** for all purchases to enable reimbursement by the Victorian Government. A reimbursement form is attached at Attachment A. You should return this form and all original receipts to the Department of Health and Human Services within 60 days of the end of your isolation period at the hotel.

Please note only those individuals who have declared a food allergy at the beginning of their stay and have been approved to use this process will be permitted to purchase food through UberEats and have it reimbursed by the department.

The Department of Jobs, Precincts and Regions has put in place arrangements across all hotels to permit UberEats drivers to deliver food to the hotel. Security staff will receive meals from UberEats drivers and deliver directly to your room.

Thank you for your understanding. If you have any questions about this process, please direct to the DHHS Team Leader located at your hotel.

DRAFT

## Appendix 11- Food Safety Questionnaire

### Food Safety Questionnaire

To be provided to DHHS Team Leader at hotel once completed

This form needs to be completed for each individual staying at a hotel under quarantine in Victoria (i.e. children staying with parents should have their own form). Completed forms should be provided to DHHS staff member.

Name: \_\_\_\_\_ Room number: \_\_\_\_\_

Contact number ph: \_\_\_\_\_

Q1. Do you have anaphylaxis?

- Yes (please indicate)  
 Single allergen  
 Multiple allergens  
 No, go to Q4

Q2 Do you have an EpiPen (in date) with you?  Yes  No

Q3. Is your anaphylaxis caused by food?  Yes (please specify)  no (please specify below)

- sulphites  
 cereals containing gluten (wheat, rye, barley, oats, spelt & their hybridised strains)  
 crustacea  
 egg  
 fish  
 milk  
 peanuts  
 soybeans  
 sesame seeds  
 lupin  
 tree nuts (please indicate)  almonds  
 brazil nuts  
 cashews  
 chestnuts  
 hazelnuts  
 macadamia nuts  
 pecans  
 pine nuts  
 pistachios  
 shea nuts  
 walnuts  
 Other food/cause (please specify): \_\_\_\_\_

Q4. Have you ever experienced a reaction after eating food and needed to take medication, like Ventolin or antihistamines?

- Yes (please specify food/s): \_\_\_\_\_  No

**If you answered yes to any of the above these details, hotel catering may not be able to meet your requirements and we will provide further information.**

Q5. Do you have a medically prescribed modified diet (please specify diet required)?

- No  
 Coeliac disease \_\_\_\_\_  
 Crohn's disease \_\_\_\_\_  
 Diabetic \_\_\_\_\_  
 Other condition (please specify): \_\_\_\_\_

Q6. Do you have a medically diagnosed food intolerance?

- No  
 Lactose  
 Fructose  
 Other food (please specify): \_\_\_\_\_

Q7. Do you have a non-diagnosed food intolerance? (e.g. never good after eating onions)

- No  
 Food/s (please specify): \_\_\_\_\_

Q8. Do you have any dietary preferences?

- No  
 vegetarian  
 vegan  
 gluten free by preference  
 low fodmap diet  
 halal  
 kosher  
 other (please specify): \_\_\_\_\_

Please note this information may be provided to the hotel, catering services, on-site nurses and Authorised Officers.

Jacinda/AB, Melissa, RED and Public Health execs,

Please see the feedback from central agencies on the 3 CCC submissions you and you teams have contributed to. I've included the lot for visibility, but only some will relate to the elements you are interested in.

I have forwarded on to the relevant authors/EOs in your teams where I understand they are best placed to try to respond by early next week.

Jacinda, Melissa, RED, some of the central agency comments go to critical assumptions about staffing costs, which as I flagged on Friday I suggest are important for you to be taken through to validate or agree variations. I have spelt out some key assumptions I think need particular agreement (below in YELLOW). I asked Melissa's office to try to find a time. I personally think the more, the merrier for this so everyone is on the same page – so please forward the invite to anyone else you would like to come.

Nick

(Virtual) CCC drafting team,

Please see central agency feedback and some requests and suggestions from me on how we respond. There's something here for everyone!

Timing is not locked in – noting centrals suggesting HP funding bid come after May Health EM spend update and that quarantine options come with DJPR update on accom spend.

We are expecting MO feedback on Monday and would like to pull together best next draft of all three addressing these comments and any from MO on Monday. Lead authors are:

- \* John S for Quarantine
- \* Michael/REDACTED for HP /PH bid
- \* REDACTED for VCDC

Tanya/Mat, it's not place to task you with anything, but there's some info requested which I think your best placed to get.

Can you please let them know if addressing the comments will not be possible Monday so they can be clear in next draft for Melissa/Jacinda.

I will separately email Melissa/Jacinda cc HP exec with a copy of this and reiterating my suggestion that there's meeting on Monday (or asap next before the next draft moves up the line).

Nick

Hi Nick, Melissa and team

Thank you for sending through the draft submissions for our review and for the meeting today.

Please see consolidated questions/comments below from DTF and DPC. It is a long list but hopefully helps with the framing of the submissions and clarifying the relationship between them. Happy to continue discussions and talk through anything that is unclear.

thanks

REDACTED

**General questions/comments**

**Timing**

- \* DPC/DTF note a report back to CCC is expected in May outlining the COVID health expenditure to date. We think it would be beneficial for this submission to come first to enable consideration of any potential underspends that could be redirected to new initiatives. REDACTED: will you be coordinating this? JOHN S: can you please check with CabParl/Sec office if this is scheduled?
- \* We consider the submissions should prioritise funding that is needed prior to the October budget process. It would be helpful if the submissions could more clearly articulate the rationale for why the longer term components (i.e. the Public Health Public Trust bid and related system enhancements) should be considered now, including any dependencies/ links with the immediate COVID response. REDACTED for drafting as discussed
- \* We note there are likely to be a number of COVID-related inquiries in the next year or so (VAGO, CCYP, OPA, Ombudsman etc). Are there some longer term decisions that may benefit from waiting until those inquiries have been undertaken? REDACTED Suggest we add line after HP bid elements eg pandemic preparedness, that this will help the department to demonstrate it is already creating capacity to learn from this pandemic to be able to anticipate and scale more effectively in future, in anticipation of reviews by oversight bodies of the government response.

**Alignment between submissions and components of submissions**

- \* If there is an appetite for CCC to consider the Centre for Public Health submission, we recommend highlighting alignment/ linkages between initiatives and across submissions. For example:
  - \* initiatives in the public health protection system submission would likely fall under the proposed responsibilities and functions of a Centre for Public Health. How will functions and initiatives be coordinated/ transferred? JOHN S/REDA: suggest Cab sub should clarify this proposal is about fostering collaboration across the sector partners, alignment in effort and better targeted research not departmental regulatory/operational preparedness as set out in HP proposal. Any actual overlaps you can see?
  - \* What are the differences in roles and functions between the proposed emergency preparedness team and the work of the central health protection function as

proposed in the public health protection system submission? **JOHN S: As above**

- \* We understand DHHS is considering a separate proposal for a centre for disease control. How will a CPH complement and align with a centre for disease control?  
**JOHN S/REDA: I'm not across this. Can you please follow up.**
- \* If a separate submission is brought to CCC on quarantine arrangement considerations, suggest the submissions should reference the linkages (e.g. permanent facility referenced in the health protection sub). **REDACT: as discussed please outline relationship in HP bid sub ie hotel not suitable for non compliant/complex clients.**

### Submission specific questions/comments

**Sustainable Quarantine Arrangements – JOHN S - AND FYI ANNALISE VD: Please consider – there are some policy and modelling questions which we may or may not be able to answer at this stage – suggest either clarify in sub or prepare notes for centrals if we aren't yet in a position and confirming that these can be done pending direction from CCC on preferred direction for this program**

- \* As discussed, if possible it would be helpful if this submission could include/ be combined with the report back from DJPR on actual accommodation costs to date including unused purchased rooms
- \* The interim model seems likely to be the most contentious. It would be useful to understand how risks would be managed (including diplomatic risks that come from rating countries of origin).
- \* More information on the proposed timeframe or marker of when the transition between phases should occur would be helpful for decision making.
- \* Would DHHS consider advocating for special eased considerations for international students in line with the new quarantine rules for returning citizens
- \* What is the projected demand for hotel rooms and other services under each model – (for quarantine, perhaps, a low/high scenario based on latest projections of people still abroad)?
- \* Could DHHS please provide a full breakdown of estimated costs underpinning each model?

**Note also, JOHN S: I understand there may be information on a Commonwealth contribution to these costs you are following up with Nat Cab team and Finance.**

### **Strengthening Victoria's Health Protection**

- \* Could DHHS please provide updated costings for all components **REDACTED** as discussed – I have also proposed that you offer briefing to Jacinda/Melissa with Pub Health leads on Monday
- \* The Laboratory Costs and Contact Tracing components were not included in the original \$120 million agreed in principle by CCC for preconditions. Could you please provide further information on these costs? We understand contact tracing has largely been undertaken using private hospital staff under the terms of our contracts with them, how do these costs reconcile to this approach? **REDACT: MAT are you best placed to coordinate?**
- \* To our general point above, is it necessary to seek the whole budget submission now (particularly given there are components that don't commence until 2021-22)? **REDACT: as discussed suggest link decision now on future HP elements (eg regional teams, pandemic preparedness) to providing the ability to workforce plan and seek to retain the best, specially trained capability rather than losing this sunk cost.**
- \* Do any other jurisdictions (in Australia) have a quarantine facility as proposed? How many patients are quarantined annually (pre-COVID-19)? Given the timeframes we are talking about it seems unlikely that these will be required for COVID patients. Why is utilising existing hospitals for this purpose not appropriate? **REDACT: you may need to check with HP. Have cc'ed ANGIE**
- \* Commonwealth funding/offsets appears low – will these be updated? **REDACTE** can you please confirm
- \* Victoria's population is much more concentrated in one location than QLD or NSW – how has this been factored in when requesting a more regional presence? **REDACT: suggest clarify that the 4 regional teams would cover the DHHS divisions which spans metro and regional communities and as with other emergency management functions act as surge capacity for other. MAYBE also check if there's any info on comparable NSW per population ratio at regional level (but only if we have it in previous bid)**

- \* Can DHHS provide an estimation on how long staff are likely to be redirected to this work:
  - \* Could DHHS also identify how this interacts with funding approved through other CCC submissions provided for duties such as contact tracing, outbreak control squads, testing units and community public health interventions and support?

MELISSA/JACINDA/REDA – I think this is a key conversation for us to have at the briefing on costing assumptions, including sub point below. Key assumptions in the bid elements are:

- \* when do we assume backfilling is required for BAU RHPEM (1 July).
  - \* when do we start new expanded functions (eg regional from 1 Jan 2020 ie while outbreak teams and increased general contact tracing capacity still in place, I assume).
  - \* how many non RHPEM DHHS staff do we expect to be able to keep or put into the surge Pub Health effort and for how long. I think currently the assumption is 1/3 of total FTE for 20-21 will be DHHS staff funded by other cost centres/outputs. SCOTT/ROB can you please confirm as part of briefing.
- \* Could DHHS give a breakdown of the disease notifications backlog and how many new notifications have been received during quarantine? Given most restaurants are currently closed and have been since early March, food safety concerns should have decreased as well as new influenza cases. JOHN S/REDACT are you best placed to draft a sentence on this eg at least indicating the types of notifications that have still be coming in, even of some types have reduced.

**Victorian Centre for Public Health – REDACT** please consider: suggest clarify responsibilities and discuss with Melissa and HP EOs

- \* How does this align with Government policy through the base review which sought to minimise external bodies and retain expertise within departments?
- \* What are the governance structures proposed for this body? Why would a new body be established rather than holding capability within DHHS?
- \* What interaction would this have with VicHealth, given that there may be an overlap of proposed responsibilities? How does the department propose to ensure that Government does not encounter the same difficulties with this body's priorities as it has with VicHealth?
- \* What advantages are there to beginning to scope this now, when the COVID-19 pandemic is still underway and there may still be further lessons to learn from the experience?
- \* Given the significant investment proposed in the Strengthening Victoria's Health Protection submission, what does the department propose DHHS will retain responsibility for and what will transition out to the new agency?
- \* How does the facility fund crisis scale surge capacity for ICU, clinical and diagnostic services? Does the facility, including the ICU capacity, lay dormant when there is no pandemic or need for isolation for infectious/contaminated patients?

Our MO confirmed to Melissa that they believe the Minister is supportive of the subs progressing but wanted to review them in detail over the weekend. So don't have Ok for you to share with your offices yet.

Works out well though for us to make edits as discussed today, address any further questions you have and finalise 20-21 response costing - hopefully by Monday.

So please send through any questions you have.

REDACTED and REDACTED

Please find attached the full set of 3 CCC submissions we're developing for COVID public health response

There have been different discussions around these over recent weeks – but I am concerned that our possible window is closing – and we have commenced recruitment to ensure we can continue the COVID accommodation and compliance functions beyond 30 June for example

You'll note below that I've discussed and now provided these drafts to Min Mikakos' office – although they too have discussed them prior

I'd appreciate any comment and direction you can provide on the subs and on the CCC agenda setting – cob Thursday this week would be very helpful – to John and I

Regards,

Melissa

**Subject:** CIC - CCC submission - COVID-19 Strengthening Victoria's health protection\_110520 FOR MO COMMENT.docx

REDACTED

As discussed on Friday – please find attached our three draft CC subs for early comments

1. Vic Centre for Public Health – is in response to the Minister's request to REDACTED for a sub on an

Australian CDC – I discussed the scoping of this one briefly with Jacob

2. 2. Sustainable quarantine arrangements – this one is to start the discussion around future shape of mandatory COVID quarantine given its inherent risk trade-off and its resourcing needs that will be difficult to maintain once restrictions ease and impact on other parts of government needing to reinstitute their functions (from which we have taken resources)
3. 3. Strengthening health protection – is an addition to the January budget submission that adds the functions/activities that it is now clear we are missing, and seeks funding beyond current TAs for the COVID public health ‘pre-conditions’ outbreak response etc, and may need to add funding for COVID quarantine and emergency relief accommodation (currently funded by TA with DJPR)

All have been discussed by the department’s board, the CDC one has been shared with DJPR due to a related submission they are drafting and we will share drafts with central agencies in an informal coordination comment round this week while we finalise the scope and costings of drafts – but we do not yet have scheduled CCC times.

Appreciate any comments on drafts and any insight into CCC agenda this week

Regards

Melissa

Submission to: Crisis Council of Cabinet

Submission Title: Maintaining the COVID-19 Response for 2020-21

Submission Type: Matter for Decision

Portfolio/s: Health

Mission/s: Health Emergency

**SUBMISSION PROPOSAL**

**Recommendation(s):**

That Crisis Council of Cabinet (CCC):

1. Approve funding of \$181.75 million in 2020-21 to maintain critical COVID-19 public health response activities from 1 July 2020, as outlined in the Submission to the CCC 'Funding to Commence Establishing the Public Health Preconditions (Sub No: CCC060)' of 7 May 2020. This includes providing job security to VPS staff who have been with the COVID-19 Public Health Command since March 2020 and community assurance that there is adequate oversight of the pandemic response in 2020-21. This net funding is in addition to an assumed Commonwealth contribution of \$167.08 million under the COVID-19 National Partnership Agreement; and
2. Agree that as part of the 2020-21 State Budget process, a Submission be brought forward which outlines critical shortfalls across Victoria's Public Health Services which have been exposed during the COVID-19 response; and the associated investment required to modernise core public health services, the pandemic response and regulatory functions over the medium to long term for the new normal.

**Objectives:**

- To seek agreement from the CCC for the investment needed to:
  - continue the delivery of preconditions to ease restrictions for COVID-19 pandemic for a further 12 months, as outlined in CCC Submission 'Funding to Commence Establishing the Public Health Preconditions' of 7 May 2020; and
  - to highlight critical funding and service capacity shortfalls across Health Protection Services which will seek funding through the 2020-21 State Budget process.

**Key Issues:**

1. Stage 3 restrictions on social and economic activity and the State-wide preparedness and response effort of the health system has avoided thousands of COVID-19 related deaths and our healthcare system being overwhelmed.
2. Victoria has now commenced a range of initiatives to provide the preconditions for easing restrictions. This includes increased community testing and surveillance for COVID-19, scaling up contact tracing capacity and quarantine operations.
3. The State's health protection function, expanded through a Public Health Command, has played a key role in investigations, planning and responding to COVID-19, and has guided Victorians, health practitioners and hospitals throughout the pandemic.
4. Critical response activities, like contact tracing, have highlighted the lack of baseline public health safeguarding capacity and meant the Department of Health and Human Services (DHHS) needed to urgently surge using less specialist experience from outside the department such as recent university graduates and generalist labour hire.
5. While the COVID-19 response has demonstrated the nation leading capability of our core health protection leaders and staff, the base level of our capacity and future supply of specialist epidemiologists and communicable diseases experts remains an unacceptable risk to the whole community.
6. Further, environmental health compliance staff, who respond to food risks such as Salmonellosis, have been redeployed to provide hotel quarantine and directions compliance support for Victoria Police, leaving environmental risks unmonitored for the foreseeable future, unless additional resources are funded.
7. Led by the Chief Health Officer, health protection aims to keep Victorians healthy and safe by reducing avoidable harm from communicable disease, food, water, radiation and other environmental hazards. It plays a key role in the response to, and recovery from, emergencies like the recent bushfires and COVID-19 pandemic, and increasingly common environmental health concerns from climate change, such as reduced water quality, and superbugs.
8. The effectiveness of Victoria's baseline health protection services is severely compromised due to increasing risks and complexity of the COVID-19 response, coupled with a lack of investment in the supply of specialist staff to monitor and respond to disease risks, new technologies, regional operations, research and preparedness.
9. We need to plan for the active management of COVID-19, and potential health protection surge activity from a 'second wave', until a vaccine has been developed and distributed to Australians – assumed to be within the next two financial years. We also risk losing the clinical staff, epidemiologists and other specialists that have been seconded and specially trained in health protection safeguarding if we cannot offer longer term contracts and career opportunities.
10. Given this, we need to both secure the Public Health Command to continue the surge in 2020-21 and adequately resource our continuing core health protection services, giving them the ability to manage non-COVID 19 risks and take additional steps to be better ready for future public health emergencies.
11. Funding requested for 2020-21 will provide job security for 12 months to retain the highest performing specialists that have been recruited for the response. These specialists would then be available to transition into roles in an expanded health

<#>A key operational issue is our centralised health protection functionsystem and metro-based specialists – compared to the (...)

**Formatted:** Font: (Default) +Body (Calibri), 12 pt**Deleted:** as part of**Deleted:** ly**Deleted:** as a matter of urgency**Deleted:** This mix of one year and longer term f**Deleted:** also provide longer term opportunities**Deleted:** to**Deleted:** developed through

protection workforce, across both metro and regional Victoria, that is better able to protect Victorians. A further funding submission will be developed to outline a longer term, sustainable investment path and proportionate uplift in Health Protection Services that is required to manage public health risks to Victorians (Recommendation 2).

12. This is consistent with the Health Emergency Mission which states that as part of the stand down and recovery phase a priority will be to 'sustain and strengthen public health, diagnostic research and routine testing capability.'

*Continuation of preconditions for easing COVID-19 restrictions throughout 2020-21*

13. The Submission 'COVID-19: Health preconditions for easing of restrictions on the Victorian community and economy' of 20 April 2020 addressed the scale of managing the virus' transmission through testing, contact tracing, and response to outbreaks, such as that recently seen in a meat processing facility and fast food outlets in Melbourne's North and North West suburbs.

14. As part of the follow-up CCC Submission 'Funding to Commence Establishing the Public Health Preconditions' of 7 May 2020, funding was sought to 30 June 2020, noting that a follow up Submission was being prepared in late May 2020 that would seek a longer-term approach to managing preconditions and sustainable public health investment.

15. This Submission seeks \$181.75 million (Recommendation 1) to continue COVID-19 preconditions by sustaining the existing Public Health Command functions, such as State-wide testing – including 12 months of Testing Blitz, GP 'hubs' and mobile testing, contact tracing resources, community public health interventions and support.

16. There are various arrangements currently in place to support the Public Health response to COVID-19 including seconded staff from other departments, health services and agencies, local government and reassigned DHHS staff.

17. Staff recruited to work on the COVID-19 response that have been trained and upskilled in public health have started being recalled from the Public Health Command to other areas of the healthcare system due to a lack of job certainty and security beyond 30 June 2020. This Submission seeks to provide a further 12 months of surety for fixed term COVID-19 response staff, and career opportunities to transition to expanded public health service roles over the longer term.

18. State costs attributed to COVID-19 will be offset by 50 per cent under a new National Partnership Agreement (NPA) with the Commonwealth and jurisdictions. The NPA is effective from 2019-20 and will continue to offset half of eligible COVID-19 costs for 2020-21.

*Restarting services stopped or reduced due to redirection of resources to COVID-19*

19. Around 93 of 175 health protection staff are temporarily reassigned to work on the COVID-19 response: in the public health team and in hotel quarantine and other compliance teams. Of the 93 reassigned staff, very few have been backfilled because other suitable candidates are also being prioritised for the COVID-19 response.

20. Due to the sheer effort required for COVID-19, this means there has been only a minimal response for all other public health risks during this time. The backlog in other disease notifications – now thousands of unprocessed notifications – is an observable

**Deleted:**

**Deleted:** This including the transition of fixed term specialist workforce into long-term roles across the Department's metro and regional public health units.

**Deleted:** ¶ There is opportunity to support sustainable opportunities for high performing and capable staff that are currently supporting front-line response efforts within the Public Health Command. This Submission seeks to open longer term opportunities to these staff as part of an expanded public health service system for Victoria.

indicator of the incidents not responded to, but many public health risks cannot be known without health protection staff's monitoring, investigation and inspection.

21. Urgent incidents since late January 2020 include: a multi-jurisdictional outbreak of Salmonellosis affecting 1050 people nationally, recent increase in Legionellosis across Melbourne, an outbreak of Hepatitis A amongst homeless people and those who inject drugs; and several imported cases of Typhoid and Paratyphoid. In addition, with the progressive re-opening of fast food and takeaway based businesses in response to easing of restrictions, the health protection services will see this work increase.

22. Despite some risks such as influenza reducing for now, continuing a minimalist response on all non-COVID 19 public health issues is not an option and exposes the Victorian community and health services to an unacceptable level of risk, on top of the current COVID-19 emergency.

23. As such, total investment sought for 2020-21 includes approximately \$14.23 million in funding for backfill to allow critical non-COVID-19 health protection services that have been suspended or reduced to return to pre-COVID-19 service levels. This would be enabled by either health protection staff with specialist skills who have been working on the COVID-19 response to return to their substantive roles or finding suitable resources to backfill their roles over the next 12 months, or mostly likely a mix of both.

24. This Submission seeks funding for 2020-21 continuation of preconditions, but it is likely that further funding will be required into 2021-22, as a vaccine is unlikely to be developed and fully distributed to the population for 24 months.

#### Emergency Preparedness Functions

25. A new centrally based, in-house public health 'emergency preparedness' team, is required to establish emergency response capabilities. This team would lead disaster preparedness pre-events, systemically developing processes to mitigate the causes of a risk or event, monitor, model and evaluate responses during event and incorporate lessons from events into future pandemic and other public health emergency planning. This initiative will provide immediate capacity to learn from this pandemic, and to be able to anticipate and scale more effectively in future. It will also be able to collect and catalogue evidence and insights to inform internal and external reviews and audits which examine the Government's response. Initial funding for 2020-21 has been sought to establish this function, with further funding to be sought as part of a future follow up Submission for Public Health in 2020-21.

#### Continuation of the Testing Blitz initiative

26. The testing blitz announced by the Government in the past month has already exceeded the target of 100,000 tests. The drive through and pop-up testing facilities need to remain in the short to medium term, particularly given the need to identify and suppress community transmission as restrictions are eased. The testing Blitz has been successful in providing the necessary data and evidence in how the virus is spreading in Victoria.

27. The Testing Blitz will continue to be carried out through a combination of drive-through and walk-up clinics, complementing the four mobile screening clinics to visit homes and workplaces, particularly in our regional areas.

*Development of a business case for a secure quarantine facility for Victoria:*

29. Under the Public Health and Wellbeing Act 2008, the Chief Health Officer may issue Public Health Orders to detain individuals with communicable diseases such as HIV and Tuberculosis (TB) with behaviours that mean they present a significant risk to public health. Despite recurrent need, a readily available facility to securely isolate people under orders has not been available to the Chief Health Officer since 2007, when facilities were re-gazetted.

**Moved up [1]:** <#>Services stopped or reduced due to protection resources to COVID-19¶  
 Critical health protection services, such as monitoring of safe drinking water, tracking and regulating exposure to radioactive material, testing environmental sources for harmful organisms (such as legionnaires disease in air-conditioning cooling towers) and responding to communicable disease notifications have been suspended or reduced, as more than half (93) of health protection staff, including the Chief Health Officer and his deputies, have been redirected to the COVID-19 response.¶  
 While this has been necessary, it has left the State exposed to significant risks such as outbreaks of communicable diseases; undetected water catchment contamination due to bushfires, blue-green algae or chemical spills; and inadvertent radiation exposures due to mishandling of radioactive materials. ¶  
 Urgent incidents since late January 2020 include: a multi-jurisdictional outbreak of Salmonellosis affecting 1050 people nationally, recent increase in Legionellosis across Melbourne, an outbreak of Hepatitis A amongst homeless people and those who inject drugs; and several imported cases of Typhoid and Paratyphoid. ¶  
 Continuing a minimalist response on all non-COVID 19 public health issues over the next two years is not an option and exposes the Victorian community and health services to an unacceptable level of risk, on top of the current Pandemic emergency.¶  
 ¶

30. Current quarantine options include using security guards at public hospitals, serviced apartments, rental properties, and in the case of COVID-19 – hotels, all of which are inadequate for containing individuals with communicable diseases whose behaviours or circumstances mean they manage their conditions and cannot be treated effectively and so present a risk to others. These risks include transmission of blood borne viruses such as HIV and infectious hepatitis through behaviours such as sharing of needles and syringes and knowingly spreading disease; and transmission of airborne diseases such as tuberculosis through non-compliance with prescribed treatment regimes.

**Investment overview**¶  
 <#>This Submission seeks new funding across three main priority areas that have not been addressed in previous Submissions to CCC or earlier ERC decisions and Treasurer’s Advances, including Health Protection initiatives announced under the ‘Extra Funding Boost for Health System COVID-19 Response’ package; or the TA for ‘COVID-19 Emergency Accommodation Program’, ¶  
 <#>The CCC Submissions on preconditions: ‘COVID-19: Health preconditions for easing of restrictions on the Victorian community and economy’ of 20 April, and ‘Funding to Commence Establishing the Public Health Preconditions’ of 7 May 2020, flagged that a

31. Further, the long-term isolation in hospital wards or hotel accommodation may contravene human rights and regulations, while negatively impacting on the individual.

32. While the number of such cases varies, at any one time across the State, there can be upwards of three individuals detained under Public Health Orders due to non-compliance with treatment orders and intentional spreading of communicable disease. Without an adequate quarantine facility in Victoria, individuals will need to be placed in inadequate settings, for the individuals and the staff seeking to treat them or keep them safe. The facility will also provide for any non-compliant COVID-19 positive individuals even after current quarantine arrangements cease.

**Moved up [2]:** <#>This Submission seeks new funding across areas that have not been addressed in previous Submissions to CCC or earlier ERC decisions and Treasurer’s Advances, including

33. Funding to scope a six-bed quarantine facility is sought to inform the development of a business case for a future Budget Submission.

**Deleted:** ¶  
 <#>Services stopped or reduced due to redirection of health protection resources to COVID-19¶

*Addressing public health risks caused by weaknesses in Victoria’s health protection system and preparing for the ‘new normal’.*

**Formatted:** Highlight

34. Even before the recent bushfires and COVID-19 emergency, Victoria’s health protection services were struggling to meet demand—at the beginning of the emergency the full team included only 11 FTE of public health physicians.

**Moved up [4]:** <#>State costs attributed to COVID-19 will be under a new National Partnership Agreement (NPA) with the

**Formatted:** Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.31 cm + Tab after: 0.95 cm + Indent at: 0.95 cm

35. As described, there is clear evidence that the State’s comparable level of resourcing puts Victorians at greater risk. Highly specialised health protection services, such as regulation of hazards and threats such as drinking water and radiation, are unable to keep up with growth in demand and complexity. As a result, there are now many public health risks that we are not addressing but should be. This means that many adverse events are going unnoticed until they reach a severe state, resulting in significant avoidable costs to individuals, health services, government and industry.

 <#>The Victorian health protection workforce lags other jurisdictions eg. Victoria has one communicable disease

36. The health protection system in Victoria is centralised, with a single team of frontline professional workers in the central office and a small contingent of environmental

**Formatted:** Font: (Default) +Body (Calibri), 12 pt

health officers across the four operational divisions. In contrast New South Wales has 15 public health units and Queensland has 13 public health units spread across their states. In those states they have demonstrated that they have regional capacity to respond to regional outbreaks – in Victoria we do not.

37. There is also no capacity at present to staff both regional and State level responses to any public health emergency. Regional and local engagement and empowerment are crucial to the success of the core functions of health protection services. To build effective local engagement and response when managing health threats, the Chief Health Officer needs to establish local intelligence networks and develop locally relevant solutions to ensure safety, resilience and trust of communities.

38. In addition to addressing the weaknesses in Victoria’s centralised and relatively modest health protection services, the recent bushfires and the need to create COVID-19 outbreak squads have highlighted the imperative to establish regional health protection teams which would at least bring Victoria closer to – but not on par with – other jurisdictions.

**Next steps**

39. A comprehensive investment strategy will be developed as part of the 2020-21 Budget process which incorporates lessons from COVID-19 and the complexity of public health service need across the State (Recommendation 2).

**Risks:**

1. Preconditions for easing restrictions are unfunded beyond 30 June 2020, creating uncertainty and/or disruption for the pandemic response, when continuity of care and effort is critical and essential to managing the transmission of COVID-19.
2. Current cost pressures across the health portfolio mean that reprioritising further funding for health protection is not sustainable and will likely result in the cessation of vital health programs and services at a time of great need.

**Support/Criticism:**

1. This Submission has been informed, and is fully supported, by the Chief Health Officer.
2. DTF and DPC have been consulted and have indicated support for the Submission and the approach – including deferring consideration of initiatives not requiring immediate funding until the October State Budget process.
3. The Victorian community is likely to be supportive of sustaining the State’s COVID-19 response and strengthening health protection services, particularly given their lived experience of COVID-19 and desire that the health, social and economic impact of future public health emergencies, including pandemics, on them and their families and friends is minimised.

**Deleted:** <#>¶  
 <#>For example, between 2017 and 2019 both Victoria and New South Wales experienced an outbreak of Hepatitis A. The NSW outbreak consisted of 47 notifications in a single population sub-group and lasted six months. In contrast, Victoria’s response was delayed and slow and the disease spread beyond the sub-group to more complex groups—prisoners and now homeless people and those who inject drugs. The result was an outbreak that has lasted over 2.5 years, with 257 notifications and avoidable hospitalisa...

 Attachments: DRAFT - Environmental scan.pptx (2.39 MB); FINAL - Pub Health & RHPem Resourcing Project scope May 20.pptx (1.33 MB)

**KD – Tent booked for Wed 27 May - 9.30 – 10.15am**

Dear Meena, Brett, Annaliese, Angie, Andrea and Pam

Thank you to you and your teams for contributing to the initial environmental scan for the Public Health, Enforcement and Compliance and Emergency Operations Command functions over the last week or so.

### Project Scope

As you know this is the first product for a resourcing project that Melissa Skilbeck and Jacinda de Witts have agreed to be joint sponsors for. As set out in the attached project scope endorsed by the sponsors, the project will develop the design for the continuation of a dedicated COVID-19 public health response, including emergency accommodation and quarantine, alongside the re-establishment of business as usual RHPem functions.

### Feedback on draft environmental scan

The first stage of the project is the delivery of the environmental scan that seeks to understand structures in place across Public Health Command, Enforcement and Compliance and Emergency Operations, identify critical roles within these structures and provide some preliminary analysis on workforce supply and demand pressures.

The first draft of the scan is attached **for your review and comment by 9am Monday, 25 May – is it accurate and complete**. Please feel free to test your sections with relevant leaders in your teams but I'd ask you not to share widely, as this is still a draft.

### Reference group

Under the project scope, you or your nominee are invited to join a reference group to provide endorsement for products to be presented to the project sponsors, discuss key issues and recommend any solutions. For example, the initial scan identifies that there are corporate support functions across the structures that have been stood up and asks the question whether some of these should be managed more consistently (eg using same rostering system).

Mindful of your precious time, the project sponsors support a *virtual reference group* based largely out of session work with you with targeted meetings only as needed by the project team to progress the work. We are testing sending you a product at end of day Thurs for feedback by Monday. If this works, we would use a similar rhythm for future papers.

That said, given that part of the project is to get everyone on the same page about what we expect will involve competing priorities and challenges, I propose to hold a kick off meeting of the reference group. We are aiming for early next week depending on schedules. The focus is

proposed to be: any general questions you have on the project scope; key interdependencies you want the project team to be aware of; and your feedback on the proposed key issues and next steps on slide 11. We will send you an agenda ahead of the meeting.

You will see that the proposed next steps require continued work with you and Corporate Services partners. We have met with Marg and Gordon in particular and agreed to coordinate how we support the next steps with your logistics leads. Be assured, as set out in the project scope there are urgent sourcing and funding bid next steps already happening in parallel. I am also checking with Euan regarding a Health Coordinator representative/input regarding clinical workforce matters.

I will ask my office to speak to yours to see what might work best for a meeting time. Assuming not all of you will be able to attend a particular time, you are welcome to consider a suitable executive nominee/rostered alternate.

Feel free to call me or **REDACTED** who is Project Director for this work if you have any questions in the meantime.

Cheers

**Nick Chiam**  
Deputy Secretary

# COVID-19 Public Health Emergency Response

ENVIRONMENTAL SCAN – DRAFT

Prepared by Organisational Transformation - for discussion

19 May 2020

Project Director: REDACTED

Project team: REDACTED

**PROTECTED**

# Contents

## Section 1

Introduction, summary covering:

1. Scope
2. Key themes identified through environmental scan
3. Workforce overview, supply and demand and critical roles
4. Priority, sequencing and next steps

## Section 2, 3 and 4

For each of the three functions in scope, the following format is followed:

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and resourcing issues to resolve
6. Capability considerations

# Section 1

## Introduction

1. Scope
2. Key themes identified through environmental scan
3. Workforce overview, supply and demand and critical roles
4. Priority, sequencing and next steps

# Environmental scan: Scope and summary text

## *Overview and purpose of this pack*

- In April 2020, the Australian National Cabinet indicated intention to pursue necessary public health action to minimise the impact of COVID-19. The Victorian Department of Health and Human Services is the lead for this COVID-19 health emergency response.
- An environmental scan has explored the structural and workforce arrangements in place across three of the department's core emergency response functions, namely, Public Health Command, Operations Soteria and Enforcement and Compliance. It the underpinning analysis for a *public health resourcing plan* sponsored by the Dep Secs, RHPEM and Public Health Emergency Coordination and Operations.
- This report is broken up into specific sections for each of these core functions, including current 'as is' structures, design considerations and threshold sustainability issues to work through. The introductory section collates these issues into themes and proposes an establishment of a reference group to work through these matters.

## *Project scope*

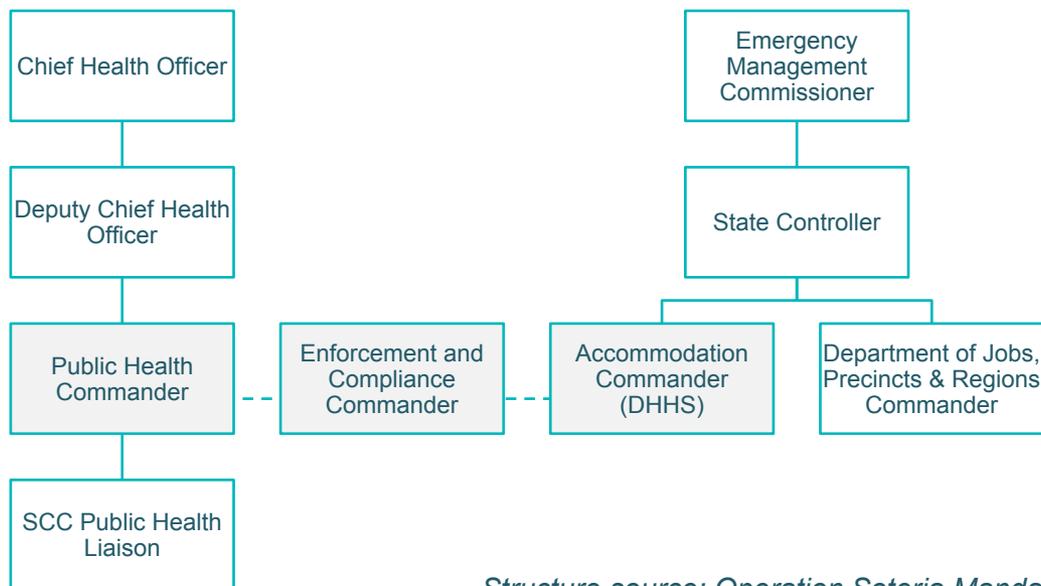

1. To design for the continuation of a dedicated COVID-19 public health response, including emergency accommodation and quarantine, alongside the reestablishment of business as usual RHPEM functions.
2. To identify critical roles and key staff who need to return to business as usual roles (within or outside DHHS) and work with corporate partners to ensure workforce planning (i.e. plan for supply and address immediate workforce gaps).

In planning how to transition to a "COVID-19 normal world", consideration must be given to the existing Clause 10 proposal and relevant funding submissions put to CCC in May 2020.

# Operation Soteria high level governance structure

Three specific functions from within this governance structure are covered in this *environmental scan*, including:

1. Enforcement and Compliance
2. Emergency Operations
3. Public health command

Structure source: Operation Soteria Mandatory Quarantine for all Victorian Arrivals Plan

# Key findings by theme

|                              |   |
|------------------------------|---|
| Design / structures          | Structural design is evolving across all three structures, making it difficult for corporate and logistics to support business needs, including an inability to formalise roles and structures, report, monitor, and source workforce.  |
| Operational policy           | Policy and operational demands are evolving, presenting challenge for operational policy development, consistency and implementation. Planning will need to consider operational resourcing, particularly for “second wave scenario”.   |
| Governance                   | Some structures, operating models, reporting lines and some functional relationships/accountabilities amongst senior leads are unclear; and matrix arrangements in operational areas may be better managed through clear hierarchy  |
| Business support duplication | Several functions across the three structures are providing program support that could be consolidated or at the least, managed consistently using the same systems and processes (e.g. rostering, logistics, public channels).   |
| BAU impact                   | BAU functions that have temporarily deployed expertise to the COVID-19 response (e.g. RHPEM) are increasingly under pressure, including some corporate / communications functions that have been embedded in new structures.  |
| Workforce                    | An overarching workforce / pipeline plan is required to address supply and demand pressures that are emerging in BAU and external pipelines due to continued demand for similar capability across different functions, capabilities that do not exist en masse in the VPS, executive oversight and up to 24/7 rosters that require significant volume of staff. |
| Corporate sequencing         | There is important corporate sequencing to work through to support the response, including industrial matters (i.e. standing up new teams and alignment with the existing RHPEM clause 10 proposal), budget positions (the availability and/or success of budget submission).   |

**PROTECTED**

# Workforce

## Overview

- In the absence of formal reporting (e.g. many staff "report" to the BAU manager), and the high volume of agency hire and deliberate policies that encourage rotation and flexible sourcing, workforce numbers should be viewed as indicative and subject to fluctuation.
- The scan found that as at 15 May approximately 1000 staff are rotating through various teams and structures across emergency accommodation, enforcement and compliance and public health. The high volume of rostered positions and teams contributes to this number – the actual number of *positions* is considerably fewer (but not yet confirmed).
- Indicatively, almost 60% of all functions are staffed from within DHHS or the Victorian Government, with the remaining 40% coming in from external, namely, local government and various agency hire spanning health services.
- Overall, RHPEM accounts for almost 30% of workforce across these functions, with over 200 staff formally deployed to the response.
- In April, these functions were estimated to need to grow to 1,400+ FTE to sustain the emergency response in 20-21. It is expected that this analysis should provide a basis for the Commanders leading these functions to validate their growth needs.

| Function                              | Staff       |
|---------------------------------------|-------------|
| <b>Public Health Command</b>          | <b>494</b>  |
| Public Health Emerg. Op. Coordination | 70          |
| Case, Contact and Outbreak            | 188         |
| Intelligence                          | 134         |
| Pathology                             | 13          |
| Physical Distancing                   | 5           |
| Public Health Coordination            | 65          |
| Public Information                    | 19          |
| <b>Enforcement and Compliance</b>     | <b>175</b>  |
| Leadership and oversight              | 2           |
| Operations                            | 135         |
| Policy and exemption                  | 38          |
| <b>Emergency accommodation</b>        | <b>400</b>  |
| Leadership and oversight              | 10          |
| Welfare Cell                          | 90          |
| Airport, Hotels and Clinical          | 300         |
| <b>Total</b>                          | <b>1070</b> |

*All numbers are indicative and require further triangulation with corporate and programs.*

# Workforce

## Supply and demand challenges

- Until now, of the ~1000 staff rotating through roles, ~40% have been sourced within DHHS and its portfolio agencies, mainly RHPEM.
- A significant proportion – 42% – have been sourced externally, including health service and general agency hire, other VPS agencies and local councils.
- The high supply of external appointments, particularly those from local councils and other VPS agencies, is anticipated by a number of functional leads to shrink as restrictions begin to ease. External staff most at risk include, but are not limited to, **AOs and exemption case managers** from Enforcement and Compliance Command and **case contact and tracing officers** from Public Health Command.
- The uncertain nature of the public health event and dynamic policy and social settings and requirements will mean that these functions will not be able to managed in a "stable state" during the remainder of the COVID-19 response. A dedicated organisational design and workforce supply function may be required to support these functions may need to continue.

| Function                       | Staff |
|--------------------------------|-------|
| DHHS                           | 41%   |
| Children and Families          | 0%    |
| Corporate                      | 3%    |
| CSOD                           | 5%    |
| Health and Wellbeing           | 1%    |
| Housing and Infrastructure     | 0.2%  |
| RHPEM                          | 30%   |
| Strategy and Planning          | 1%    |
| Administrative Offices         | 1%    |
| External                       | 42%   |
| Casual Staff                   | 0%    |
| External (Councils and VicGov) | 14%   |
| External agency                | 28%   |
| VicGov                         | 17%   |
| Various (VicGov Mobility)      | 17%   |

*All numbers are indicative and require further triangulation with corporate and programs.*

# Workforce

## Critical roles

All roles are important in the COVID-19 response. This slide lists *critical* roles identified by functional leads as 'roles in the structure they cannot do without, or easily replace' if the employee became unwell, run down or unavailable. These critical roles can be categorised as 1) leadership (i.e. executives or managers overseeing key functions) and 2) technical (i.e. technical roles where capability is limited or not readily available. Several roles already have people appointed to them, but require rostering/twinning support.

*Note: All structures in this report outline critical roles in red and high level role descriptions are in the appendices.*

### 1. Enforcement and compliance

*Commander; Deputy Commander AO Operations; Senior Authorised Officers; Manager Policy and Protocols; Exemption Case Managers*

### 2. Emergency Operations

*Deputy Commander; Deputy Commander Hotels; Deputy Commander Ports of Entry; Deputy Commander Welfare; Clinical Governance Lead; Welfare Operations Manager; CART practitioners; Hotel Site Lead*

### 3. Public Health Command

*Chief Health officer; Deputy Chief Health Officer; Deputy Commander Strategy & Planning; Deputy Commander Intelligence; Manager Intelligence Operations; Manager Surveillance & Response; Manager Strategy, Systems & Reporting Intelligence; Deputy Commander, Pathology and Infection Prevention and Control; Manager, Pathology Operations; Manager, Infection Prevention and Control Operations; Deputy Commander Case, Contact and Outbreak Management; Operations Lead, CCOM; Strategy and Policy Lead, CCOM; Team Leader Triage and Notification; Deputy Public Health Commander Physical Distance; SMA CD, Deputy Commander, Public Information; Public Information Officer; Deputy Public Information Officer; Director, Outbreak; Executive Lead, COVID Directions; Lead, Risk and Escalations, COVID Directions*

# Ongoing impact on BAU

## Health protection branch

Based in RHPEM, the role of the Health Protection Branch is to protect and manage public health risk through regulating, monitoring, ensuring compliance, incident response and health promotion and education (e.g. communicable diseases, environmental health hazards (other than pollution and waste) and food and drinking water safety).

Usually, the branch consists of ~150 staff, although, the establishment of public health incident management and regulatory functions to respond to COVID-19 means the Communicable Diseases and Environmental components have been diverted and considerably depleted. A paper submitted to Board in May 2020 outlines the risk to RHPEM responses more broadly and this slide highlights specific issues for Health Protection.

As we enter a 'new normal', a strategic decision will need to be made on how best to mitigate these risks, including considerations for reintegration of the COVID-19 response into BAU health protection.

### BAU risk impact

Regulatory prevention activities estimated to be 50% less (e.g. inspections for radiology, cooling towers, other communicable diseases, educate and inform); reduced/slower auditing responses (e.g. food / water safety); routine follow ups (e.g. congenital syphilis investigations).

### BAU workforce impact

OHS issues relating to fatigue, stress and uncertainty as staff perform different roles to manage BAU activity; reduced innovation; inability to manage new and existing performance management or misconduct

### Legislative

Complexity emerging with dual Chief Health Officer legislative responsibilities (i.e. not all powers can be delegated to deputy or acting (e.g. use of emergency powers); financial and people delegations

### Governance

Core branch executive split across different priorities; some reporting arrangements are complex under current shadow function arrangements

# Key issues to be addressed and next steps

## Key issues to be addressed based on this scan

- The *"as is" structures* in this scan should provide the basis to validate costings for sustaining these functions and for corporate services to work through corporate issues e.g. reporting lines. At this stage, all numbers in this pack should be treated as indicative and subject to further review.
- The *design considerations* indicate several teams where new or changed roles and responsibilities or reporting lines are needed.
- The *workforce analysis* shows where RHPEM staff are located and combined with critical role analysis should support strategies to mitigate risk in the return to BAU.
- The *workforce analysis* highlights functions that are vulnerable to external workforce departures, including AOs and case and contact tracing that require alternate sourcing strategies.
- The *critical roles* identified indicate immediate recruitment priorities (some of which are underway).

|   | Next steps and actions   | Lead                                      |
|---|--|---|
| 1 | Validate 20-21 resource costings.  | RHPEM<br>Coord / PH<br>Op Coord / Finance |
| 2 | Agree with Corporate Services how to progress key elements of this work, including a coordinated approach to IR, role and structural design, workforce reporting and project management. | OT / P&C /<br>Customer Support            |
| 3 | Agree and implement design changes, including Pub Health Command expansion.  | OT / P&C /<br>Customer Support            |
| 4 | Critical role recruitment in May and June.   | P&C / OT                                  |
| 5 | Alternate sourcing strategies.   | OT / P&C                                  |
| 6 | MCC submission to secure VPS supply  | RHPEM Coord                               |
| 7 | CCC submission to secure funding.  | RHPEM Coord                               |
| 8 | Develop, implement BAU restoration plan for RHPEM,   | OT / P&C /<br>Customer Support            |

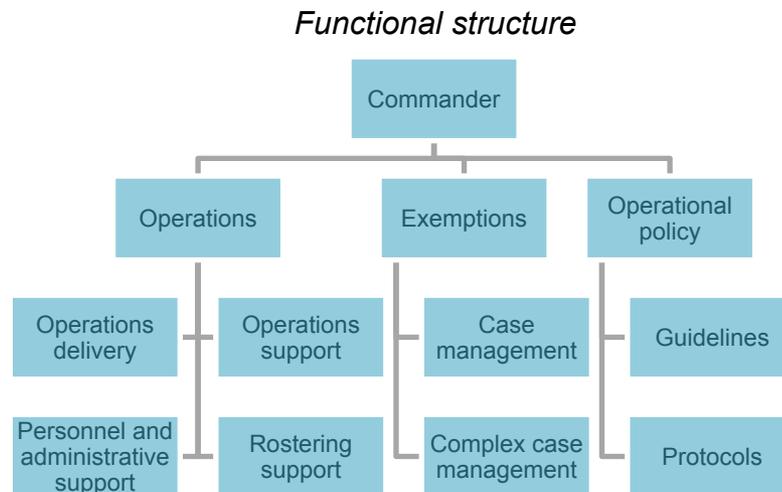

## Section 2

### Enforcement and Compliance

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and resourcing issues to resolve
6. Capability considerations

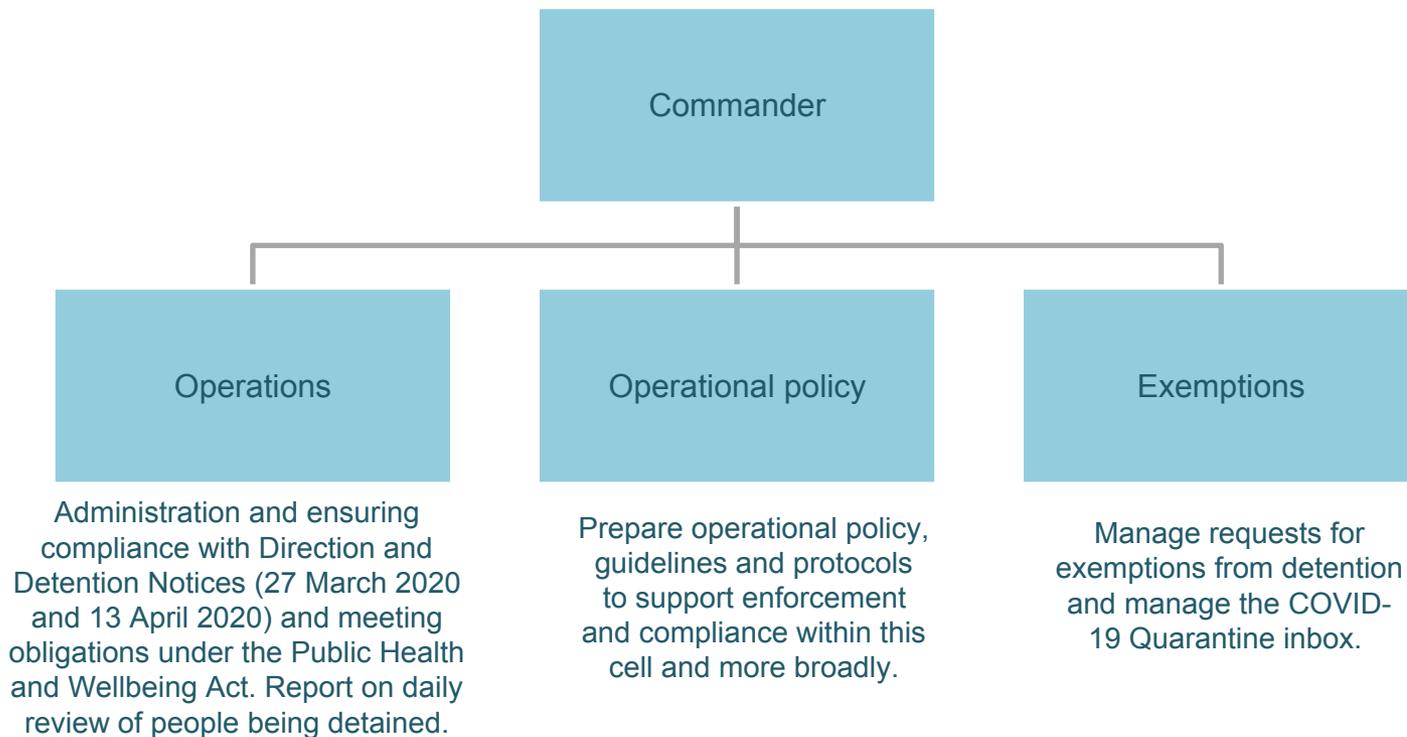

# Enforcement and Compliance: Background

- As of 16 April 2020, National Cabinet has indicated an intention to pursue necessary public health action to minimise the impact of COVID 19
- The policy is given effect through a direction and detention notice under the *Public Health and Wellbeing Act 2008*. The directions are displayed on the department's website and were made by the Deputy Chief Health Officer or Chief Health Officer.
- Beyond community wide directions, a mandatory quarantine (detention) approach was introduced by the Victorian Government, consistent with the Commonwealth Government through a policy that a detention order would be used for all people arriving from overseas into Victoria.
- A Compliance and Enforcement Command has been stood up to provide advice and input into complex compliance matters and to execute enforcement and compliance on behalf of Chief Health Officer and their delegate.

# Enforcement and Compliance

## High level functional structure

# Enforcement and Compliance

## Operating model components

- Skype is the predominant communication software being used to accommodate external stakeholders.
- The Compliance and Welfare Management System (CWMS) has three components – AOs use *Compliance Form*, Nurses use *Nurse Health Record* and Welfare staff use Welfare Management System. Smart form for exemptions rolled out W/C 20/5 to allow direct applications to CWMS and reduce email traffic.
- Policy and Protocols team do not have access to the software.
- Microsoft Teams is used and there are several channels.

### Technology

- Emails allow several external channels used for requests for exemptions (e.g. people who will be detained, the MO, other departments, DFAT, consulates, shipping companies etc.)
- DJPR provides data and information to AOs about detainees and those in quarantine through daily Situational Reports.
- While the CWMS provides data on detainees, there are issues with this (e.g. timeliness) and a team is being set up to address this.

### Channels

- Pre arrival: request to be exempt from quarantine
- Airport: quarantine exemptions; issue detention notice cards and capture a picture of card in CWMS, and update CWMS; escort persons in quarantine to transport
- Hotel: Update detention notice card with room details; update CWMS
- During Quarantine: manage process flows and update CWMS for matters relating to requests for early exits; daily compliance checks; welfare checks; room, hotel or hospital transfers and transportation; hotel exits; security escalation; request to be exempt from quarantine.

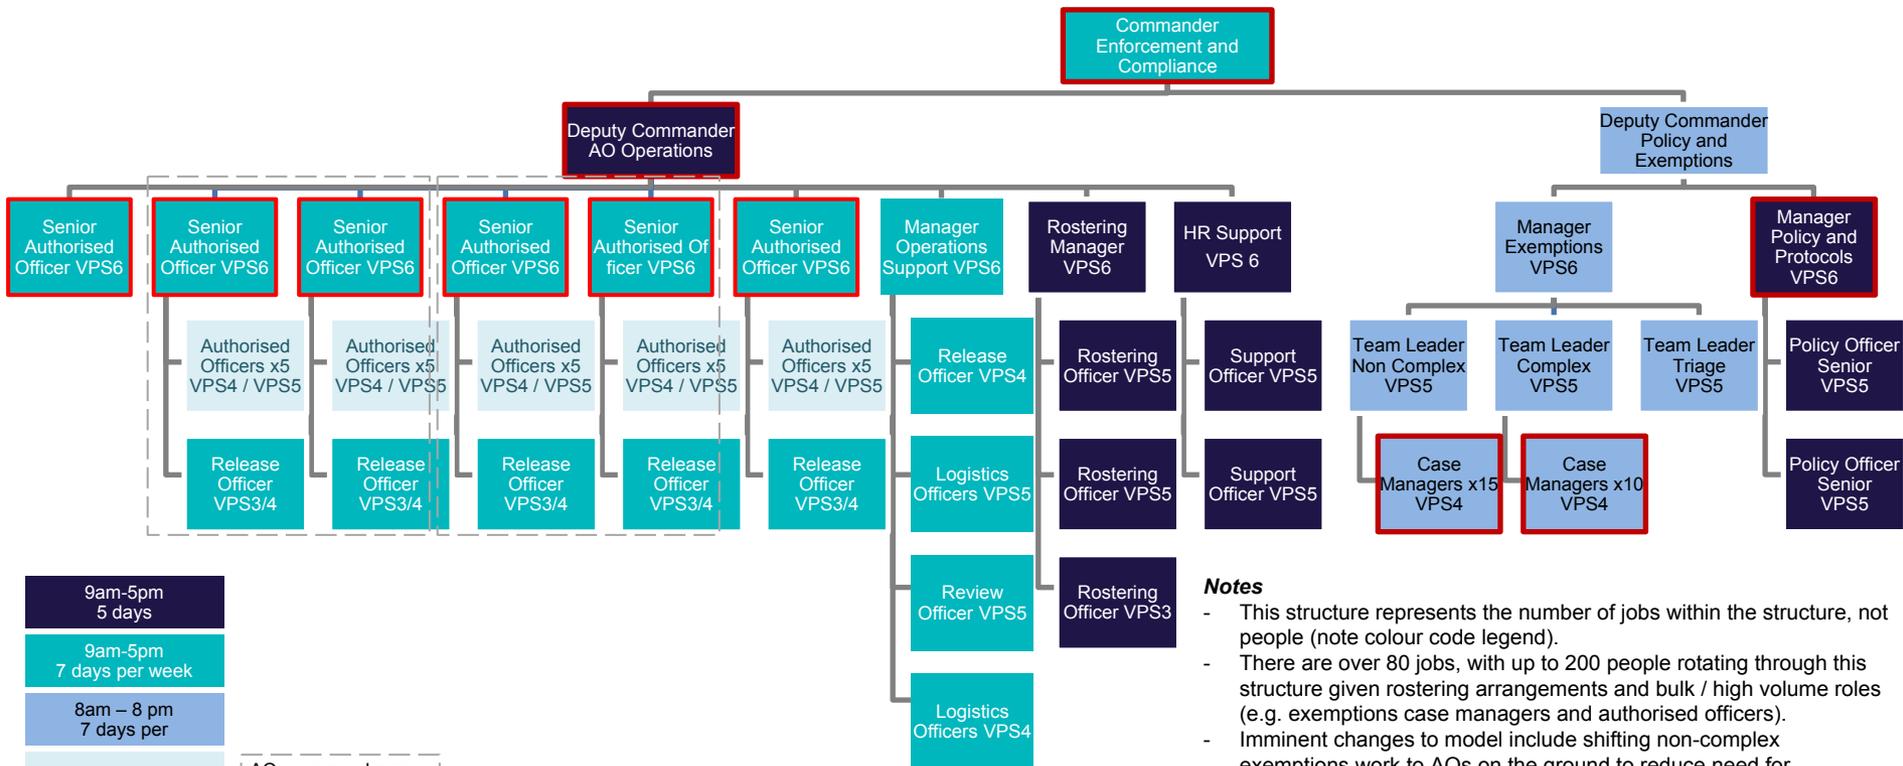

### Process

### Legislation

- Public Health and Wellbeing Act 2008 (PHWA)
- Sections 200(1) and 200(2) – (8) set out emergency powers and obligations
- Part 9 outlines general powers of Authorised Officers.
- s.183, s.188(2), s.193(1), s.203(1) set out infringements

# Enforcement and Compliance

## Detailed structure

|                            |
|----------------------------|
| 9am-5pm<br>5 days          |
| 9am-5pm<br>7 days per week |
| 8am – 8 pm<br>7 days per   |
| 27 / 7                     |

AOs managed across 8 hotels each

**PROTECTED**

- Notes**
- This structure represents the number of jobs within the structure, not people (note colour code legend).
  - There are over 80 jobs, with up to 200 people rotating through this structure given rostering arrangements and bulk / high volume roles (e.g. exemptions case managers and authorised officers).
  - Imminent changes to model include shifting non-complex exemptions work to AOs on the ground to reduce need for exemptions case managements; and rostering may move to EOC.

# Enforcement and Compliance

## Workforce considerations

### Profile and high level issues

Structure includes a combination of bulk roles (Authorised Officers), generalist (administrative and corporate support) and specialist roles (exemptions and release officers).

Several rosters and up to 24/7 operations require high volume of FTE and associated issues (i.e. turnover, training etc.).

Predominant source of operational staff is existing RHPEM staff (i.e. Human Services Regulator; Regulation and Reform; Health Protection) external (i.e. AOs from councils and government agencies) and other divisions (i.e. CSO; SCV).

Predominant source of program staff is existing agencies (i.e. case managers from Hays).

### Bulk versus individual roles

Executive roles overseeing operational and policy roles:

1. Commander (Meena / Murray)
2. Deputy Commander x2 (Anthony Kolmus Kolmus and **REDACTED** and Anna Peatt contract expiring)

Bulk roles performing both operational and operational policy roles:

1. AOs (team leaders, release officers, general support), sourced internally and externally
2. Exemption case managers sourced externally from Hays.

Generalist roles performing rostering, administration and corporate support:

1. Op policy roles from various sources
2. Rostering roles from Reg & Reform
3. HR and administrative support roles from RHPEM (Standards and Regs)

### Sourcing challenges

Commander and deputy commander roles are executives from RHPEM who are performing a dual role.

Case managers are not readily available and therefore sourced externally via Hays, noting there may be less need for them as non-complex exemption work moves to AOs on the ground.

AOs are sourced from various places and subject to fluctuating demand (e.g. people in hotels regularly changing).

Rostering approach duplicated across multiple functions.

Shadow corporate support functions established - should consider if these should be consolidated with others.

### Forecasted supply and demand

Internal EOs and AOs required to return to substantive positions in RHPEM, coupled with anticipated shortages of external availability (e.g. as local councils resume their own regulatory functions, AOs will need to return).

# Enforcement and Compliance

## Key features of the structure and design considerations

### Function features

- Three executives overseeing the function.
- Heavy operational structure with focus on legislation.
- Embedded administrative support (i.e. HR rostering support).
- High level of redeployment of staff (i.e. AOs) across other emergency response functions.

### Design considerations

1. The Deputy Commander AO Operations has a large span of control and may not require some direct reports (e.g. rostering team could report to Manager Operational Support).
2. Potential for rostering function / capacity to be fully absorbed/provided elsewhere for scale to reduce temporary rostering roles in structure.
3. Rostering Team Leader is currently VPS6 given complexities and could transition to a VPS5.
4. While policy capability exists and is readily available, there is a gap in capability availability for operational policy design and development (i.e. guidelines, protocols etc.).
5. Dedicated corporate or logistics support, either within or across other COVID-19 response functions, could reduce the need for embedded corporate support roles.
6. Require an enduring structure to retain staff, reduce re-training for and increase consistency of specialised regulatory decisions and responses.

# Enforcement and Compliance

## Key issues to resolve

### Focus

Several design, workforce supply and demand and transition issues need to be addressed.

### Issues to be worked through...

1. The tension between emergency management response and global public health crisis has created governance issues as they relate to the accountability for enforcement and compliance function (i.e. there is some confusion about reporting lines and relationships to other emergency functions such as public health command, emergency management or RHPEM).
2. No regulatory capability framework that articulates the skills required and emerging gaps (e.g. there is arguably a lack of available operational regulatory policy capability i.e. strong policy exists but not required moving forward).
3. Need for consistent and dedicated corporate support (beyond access to mobility pool) to assist source/recruit, onboard and roster technical staff to eliminate shadow functions and focus on core business.
4. High volume of staff sourced from Regulation and Reform branch in RHPEM.
5. Fluctuating nature of demand for AOs and associated sourcing and retention challenges (i.e. reliance on external supply that will dry up as restrictions are lifted, short term nature of contracts, turnover and training impacts).

# Enforcement and Compliance

## Regulatory capability considerations (IPAA framework, 2015)

### Make

- identification of a need to modify behaviours to achieve a policy goal that is best addressed by regulation
- the selection and application of the regulatory instrument(s), bearing in mind the compliance burden that is being imposed

### Operate

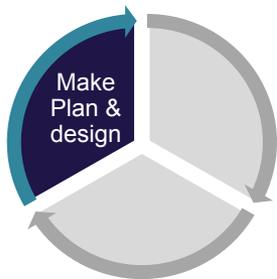

- information and education to raise awareness of the regulatory program and support regulated entities to comply with regulations
- the setting of standards
- application and/ or assessment processes
- stakeholder engagement in design and implementation
- monitoring of compliance
- enforcement of the law to address non-compliance

### Review

- evaluation of the regulatory program and its governance.
- following evaluation, implementation of any required changes to the regulatory framework or how it is administered
- periodic reassessment of whether the regulation is still appropriate to contemporary needs or if some alternative government intervention might be preferable

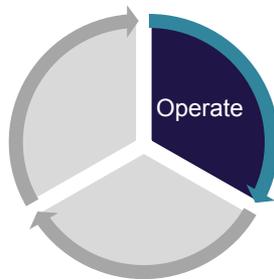

# Enforcement and Compliance

## Core capabilities for specific roles against IPAA regulatory framework

Roles: Lead Commander; deputy commanders; operational policy

- Identify the problem and options for an appropriate response
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

Roles: Team Leaders; Supervisors; Authorised Officers

- Process and operational policy design
- Managing Probity
- Making evidence based regulatory decisions
- Regulatory Information, intelligence and data management
- Resource planning
- Stakeholder management and education
- Complaints management
- Monitor compliance
- Responding to non-compliance
- Significant breaches and adverse events

Roles: Lead Commander; deputy commanders; operational policy

- Monitor and assess regulatory performance
- Adjust and improve ongoing regulatory performance
- Regulatory reform and review (with Public Health Command)

# Section 3

## Emergency Operations

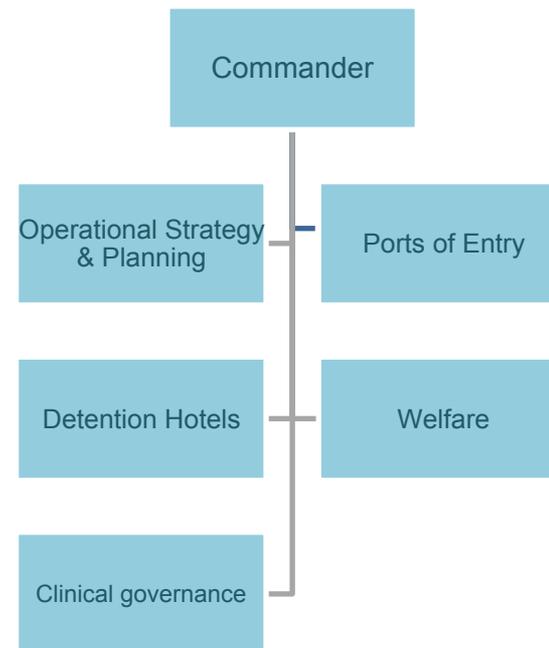

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and resourcing issues to resolve
6. Capability considerations

# Emergency operations

## Background

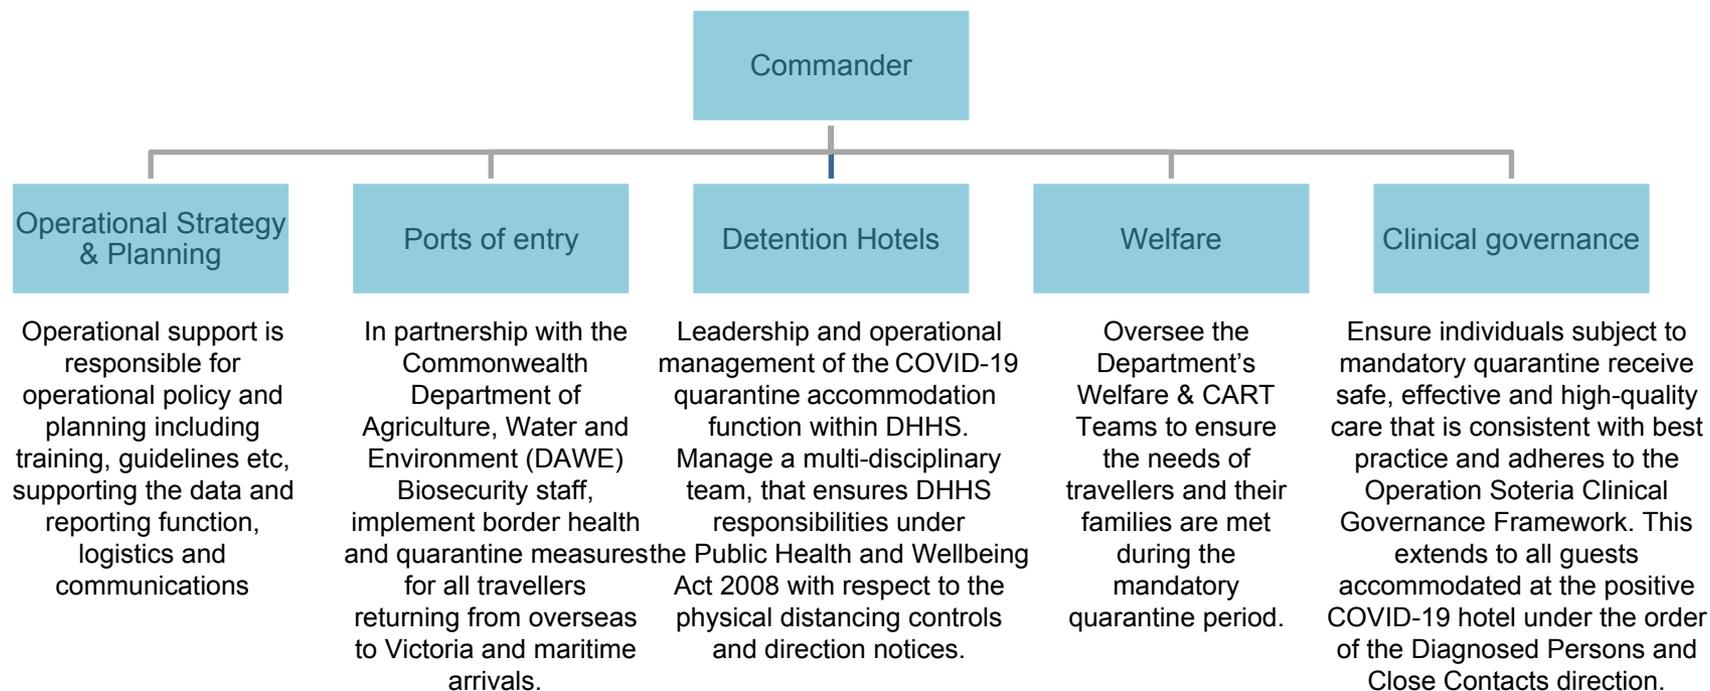

- Following the Australian National Cabinet direction that from 28 March 2020, all passengers returning from international destinations undergo 14 days enforced quarantine in hotels to curb the spread of COVID-19, Operation Soteria was established by the Victorian Government to achieve safe, authorised mandatory detention upon arrival into Victoria.
- The Emergency Operations Cell (EOC) led by the DHHS Commander COVID-19 Accommodation is responsible for:
  - Delivering secure quarantine accommodation to all overseas travellers and others assigned accommodation, in collaboration with DJPR, VicPol, DoT, DET, DPC, ABF, AFP
  - provision of welfare to individuals in mandatory quarantine (through the Deputy Commander Welfare);
  - ensuring the safety, health and wellbeing of individuals in mandatory quarantine and DHHS staff;
  - ensuring a safe detention environment at all times.
  - provision of healthcare to individuals in mandatory quarantine.
- An emergency accommodation structure has been stood up to support detention accommodation and ports of entry.

### *Functional structure*

# Emergency operations

## Functional structure and description

# Emergency operations

## Operating model components

- Teams is the predominant internal communication software being used to accommodate external stakeholders.
- Telephony and other conventional communication channels are used.
- The Compliance and Welfare Management System has three components – AOs use *Compliance Form*, Nurses use *Nurse Health Record* and Welfare staff use Welfare Management System.
- Data team to manage and oversee performance reporting data, data flows, audits and improvements

Technology

Channels

- Airport: Work with Biosecurity officer to ensure health check is performed; coordinate transport to hospital (as required); Issue airport arrival survey (to be filled in the bus
- Hotel at entry: Organise hotel check-in; collect airport arrival survey (and file); manage basic safety check.
- Hotel During Quarantine: daily health check (onsite nurse or via call); long welfare survey (within day 3); short welfare survey (day 9/10); referral to nurse or CART for escalation; complex assessment; development plan for complex cases); facilitate COVID-19 testing (Day 3 and 11); organise required medical services, e.g. medical practitioners, ambulance; respond to guest requirements and incidents
- Coordinate DJPR, VicPol, DoT, ABF, AFP to achieve program outcomes

Process

Legislation

- ABF (Border force) re plane arrivals
- AFP and DoT and Vic Pol re transport and security
  - DJPR re hotels, security and transport
  - CWMS for health and welfare reporting
    - Covid Directions email
    - Welfare Call Centre
- Covid Quarantine email

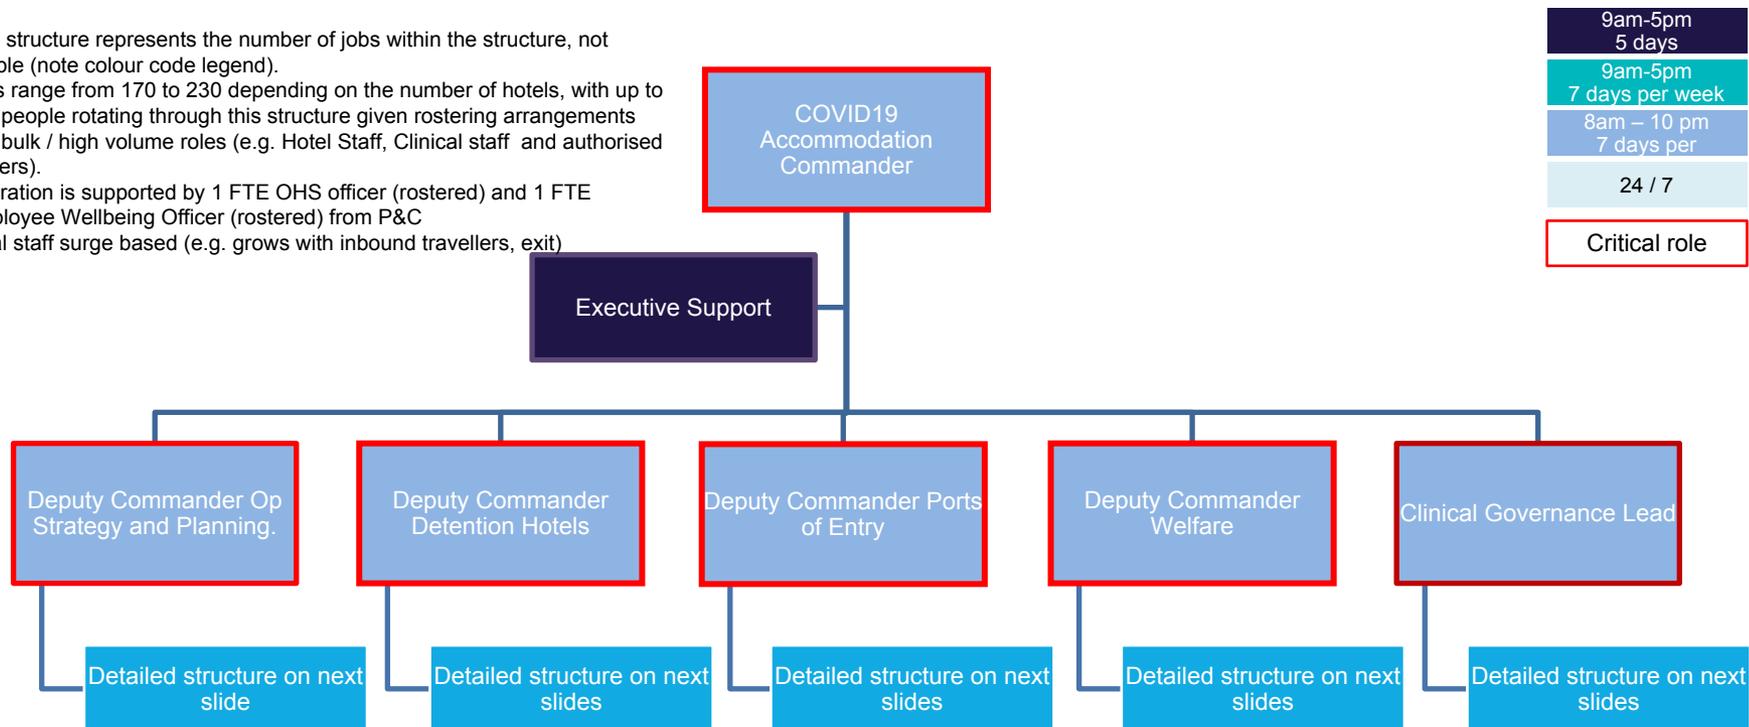

- Public Health and Wellbeing Act 2008 (PHWA)
  - Charter of Human Rights

# Emergency operations

## Overall structure

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- Jobs range from 170 to 230 depending on the number of hotels, with up to 400 people rotating through this structure given rostering arrangements and bulk / high volume roles (e.g. Hotel Staff, Clinical staff and authorised officers).
- Operation is supported by 1 FTE OHS officer (rostered) and 1 FTE Employee Wellbeing Officer (rostered) from P&C
- Total staff surge based (e.g. grows with inbound travellers, exit)

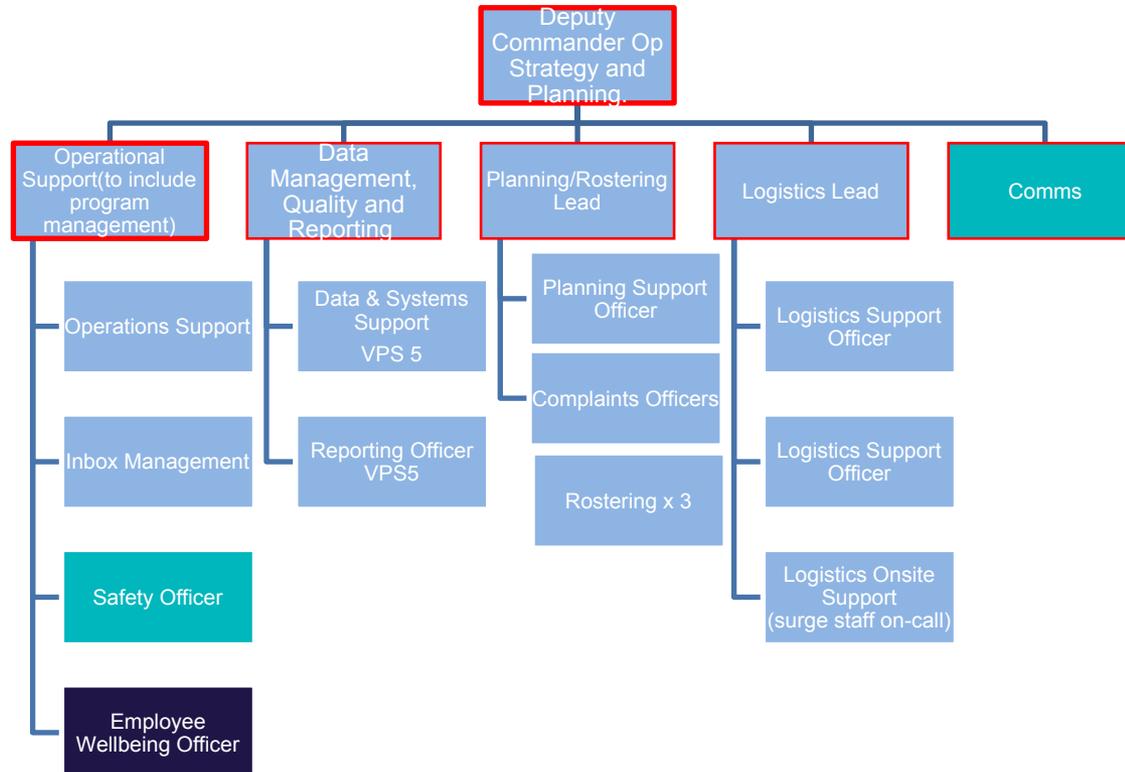

**PROTECTED**

# Emergency operations

## Operational Strategy and Planning detailed structure

### Notes

- Program management function currently in Welfare Cell will be transferred to this function.

|                            |

| Critical role              |

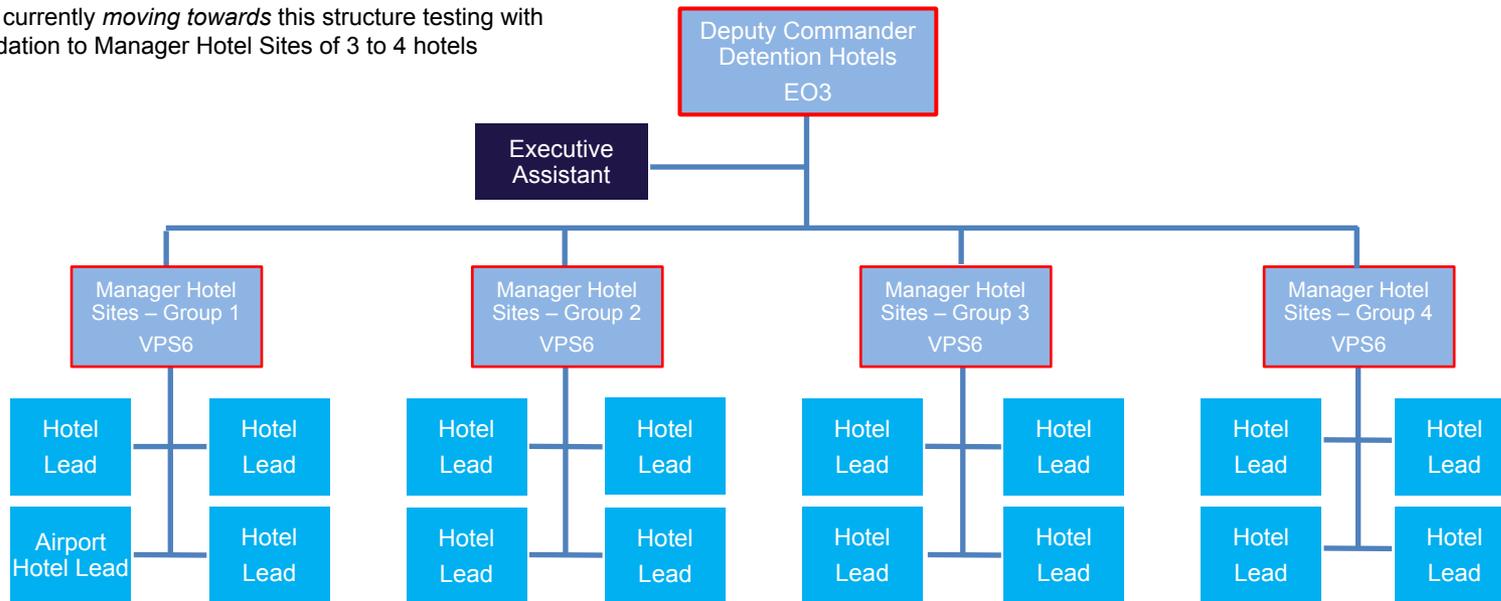

**PROTECTED**

# Emergency operations

## Example of detailed matrix structure at hotel sites

### Notes

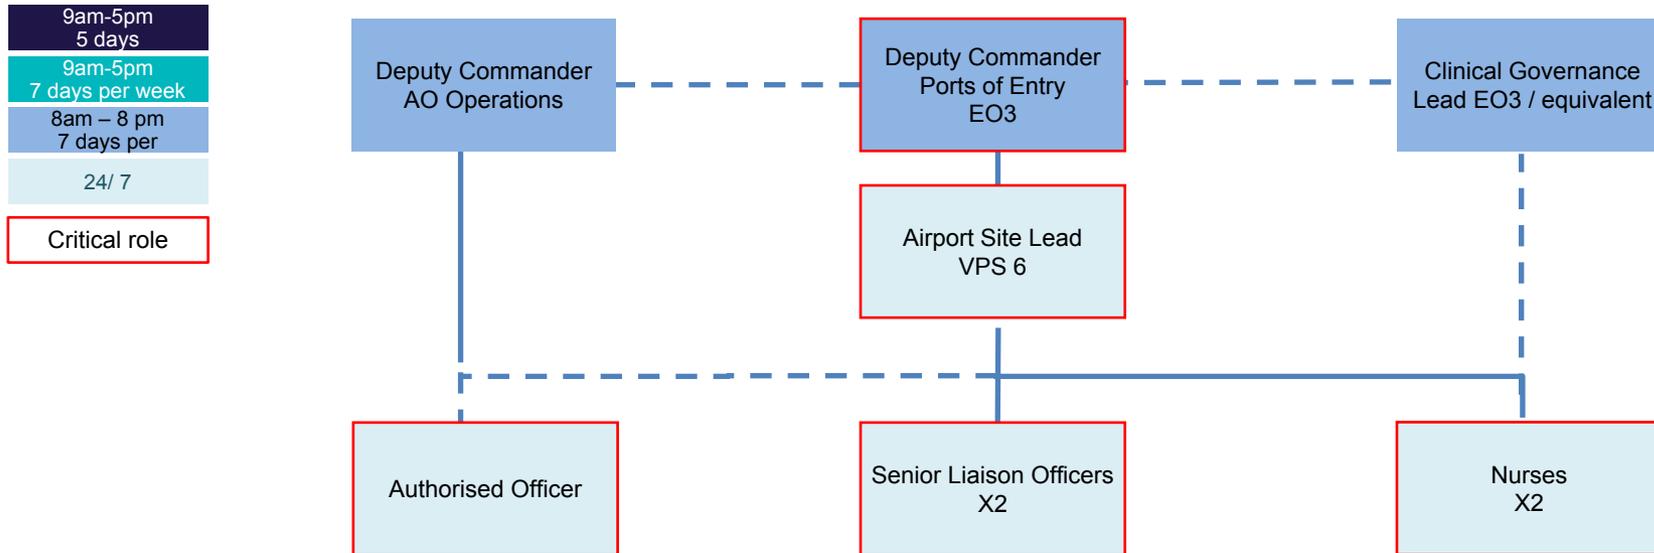

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- 10 – 16 Hotel sites (this surges or contracts as required) sit under the Dep Commander Hotels 10 roles per site range between 100 to 160 staff
- Hotel Site Lead manages matrix team and is point for day to day issues, and escalations.
- Representatives have clear roles, responsibilities and obligations under the Act or protocol.
- Exit Team Leader involves a roving role on lead up and on day of exit)
- The following is the average number of medical staff at a hotel site, noting this changes depending on the need:
  - 1 ED nurse per shift 7days a week
  - 2 general nurses
  - 1 Mental health nurse
  - 1 GP 8am to 6pm 7 days a week
  - 1 clinical lead (GP) telephone consultation
- Testing occurs at 3 to 4 hotels per day with a compliment 1 DHHS support officer per hotel and up to 12 testing team of 2 nurse and one personal care attendant .

**PROTECTED**

# Emergency operations

## Airport site detailed structure

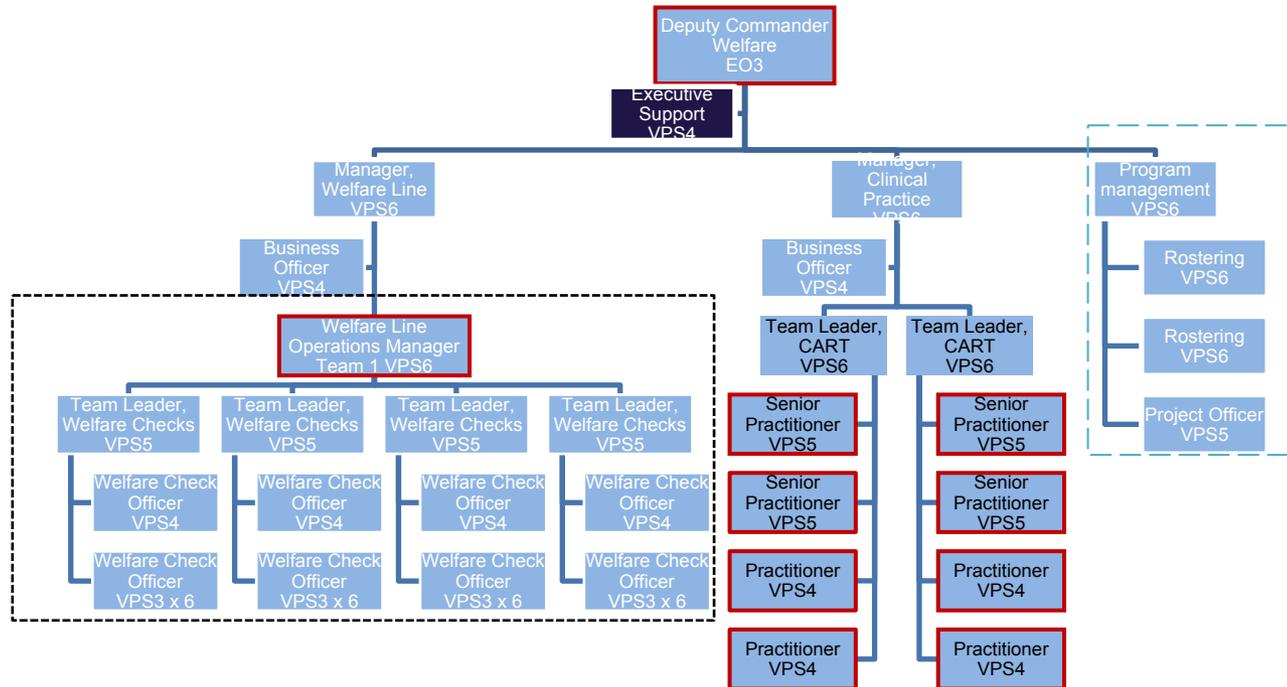

### Notes:

1. Moving towards this structure (i.e. Clinical Governance role is yet to be filled)
2. This structure surges demand including large flights, multiples flights arriving and transiting passengers. Same roles, increase people
3. Airport Site Lead manages matrix team of AOs, Medical Staff and DHHS staff on day to day issues ,escalates issues and provides support to on site team and reports to Deputy Commander Ports of Entry
4. Deputy Commander Ports of Entry manages day to day issues of the on site team including rostering in consultation with Deputy Commander AO Operations and Clinical Governance Lead
5. Deputy Commander AO Operations provides daily briefings to all AOs

# Emergency operations

## Welfare detailed structure

|   |
|---|
| 9am-5pm<br>5 days                         |
| 9am-5pm<br>7 days per week                |
| 8am – 8 pm<br>7 days per                  |
| 24 / 7                                    |
| <b>Critical role</b>                      |
| Team duplicated (i.e. two teams, not one) |
| Temporary team, expiring May 2020         |

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- Approximately 100 staff rotate through this structure.
- Program management team to be picked up by Deputy Commander Op Strategy and Planning.

## Workforce considerations

| Profile and high level issues  | Bulk v individual roles  | Sourcing challenges  | Forecasted supply and demand  |
|--|--|--|---|
| <p>Dynamic environment influences operational structures and models.</p> <p>Workforce includes a combination of bulk roles, generalist and specialist roles (clinical).</p> <p>There are different levels of rostered roles ranging from BAU to 24/7 operations that require high volume of FTE and associated issues (i.e. turnover, training etc.).</p> <p>Predominant source of Welfare Cell (i.e. phone line and CART function) are internal staff (i.e. mobility pool and critical skills register), but also external / volunteers (i.e. agency and causals). Airports are predominantly Operational Division and Hotels include internal (i.e. mobility pool) and VPS departments (e.g. DET and DJPR).</p> <p>Program management support staff are from CSOD, due to return in May.</p> | <p>Executives overseeing operational roles:</p> <ol style="list-style-type: none"> <li>1. Commander (Pam / Merrin)</li> <li>2. Deputy Commander x 3 (Michael MefflinEO3, Colleen Clark/Anita Morris, Sandy Austin/Melody Bush)</li> </ol> <p>Bulk roles performing operational roles:</p> <ol style="list-style-type: none"> <li>1. CART practitioners</li> <li>2. Welfare calls to hotels (outbound only)</li> <li>3. DHHS support at hotels (e.g. site lead)</li> </ol> <p>Generalist roles performing rostering, administration and corporate support:</p> <ol style="list-style-type: none"> <li>1. Program support, including rostering (from CSO)</li> </ol> <p>Specialist roles performing clinical support and complex assessments:</p> <ol style="list-style-type: none"> <li>1. Senior practitioners and clinical roles in both CART and site operations.</li> </ol> | <p>The EOC is staffed predominantly by Ops EM and Operations EM surge staff. All Ops EM Directors are working in EOC and covering their own BAU.</p> <p>Practitioners are at risk of depleting critical resources in OPP and CSO more broadly. Program support that is typically based in CSOD is in high demand, but at risk of depleting CSO functions.</p> <p>Rostering approach duplicated across multiple functions</p> | <p>Supporting rostering and consolidating program support functions important to reduce reliance on CSO functions in medium term.</p> |

# Emergency operations

## Key features and design considerations

### Function features

- There are several (TBC) executive positions overseeing the function, although, multiple executives rotate through given operational requirements.
- Regularly accommodate surge and contraction with very tight time frames.
- Work with integrated teams to support on the ground operations.
- Responsible for end to end welfare from airport to hotel, to ongoing social supports.

### Design considerations

1. Span of control for a medium term response needs to be considered in the structure (current structure represents an immediate emergency response need to rethink the structure and governance that considers the response will be longer but still time limited – therefore integrated response).
2. Clinical Governance role needs refinement (i.e. incorporate clear oversight and secondary consultation and escalation role for clinical staff).
3. Need for communications capacity to work closely with other emergency response functions (e.g. enforcement and compliance BAU) and assist inter-agency operations.
4. Dedicated corporate or logistics support, either within or across other COVID-19 response functions, could reduce the need for embedded corporate support roles. Alternatively, the rostering function could be supported by, or consolidated with Public Health Command).
5. Call centre and communications outbound and inbound need to be reconsidered (greater integration of broader info lines)
6. Data management and quality and reporting needs to be improved across the program

# Emergency operations

## Key tensions to resolve

| Focus  | Items to be worked through...  |
|--|--|
| <p>Several design, workforce supply and demand and transition issues need to be addressed.</p> <p>There is a particular focus on decision making processes and governance need to accommodate an interim, complex response</p> | <ul style="list-style-type: none"> <li>• Complexity working in a matrix model in an operational emergency response 'on the ground' (i.e. this is not an ideal model for an emergency); and developing an interim response that is a hybrid of emergency and BAU</li> <li>• High volume of staff sourced from BAU functions, including emergency management staff from all Operations Divisions and central, program management, clinical and practitioner staff from CSO, balanced with an operation that faces frequent surge/contraction.</li> <li>• Clarity of roles, relationships, governance and indirect impact of existing functions (e.g. the State Health Coordinator) and new functions such as 'hotel for hero'.</li> <li>• Impact of policy and regulatory decisions that change client volume and operating models as we transition from response to recovery (i.e. impact of state of emergency, second wave responses etc.).</li> <li>• Potential to maximise value of call centre function by grouping some on site and strengthen relationship with DJPR (note this would require different capability); and exploring opportunities for integration and interaction with other DHHS call centre functions.</li> <li>• Resolve issues relating to the spread of data accountability and custodianship across emergency response functions and resource accordingly (currently, EOC are managing welfare issues and E&amp;C are managing their regulatory issues).</li> </ul> |

## Public Health Command

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and tensions to resolve
6. Capability considerations

# Public Health Command: Background

- As of 16 April 2020, National Cabinet has indicated an intention to pursue necessary public health action to minimise the impact of COVID-19.
- The establishment of the Public health Command Structure sets policy, operational policy and manages public health operations to effectively:
  - Reduce introduction of new cases from overseas
  - Find every case of COVID-19 through contact tracing
  - Ensure suspected and confirmed cases are rapidly isolated
  - Effectively manage outbreaks of COVID-19
  - Reduce community transmission
  - Protect population groups who are most vulnerable to complications of COVID-19 by:
    - Safeguard the provision of healthcare within the health system
    - Mitigate societal and economic harms from interventions to prevent COVID-19
  - Prepare to vaccinate the population against COVID-19 (when available)

# Public Health Command

# Public Health Command

## Functional structure and description

### Notes:

- Office staff and structures are not included in scan
- The Public Health Emergency Operations and Coordination function is not shown here, but included in scan

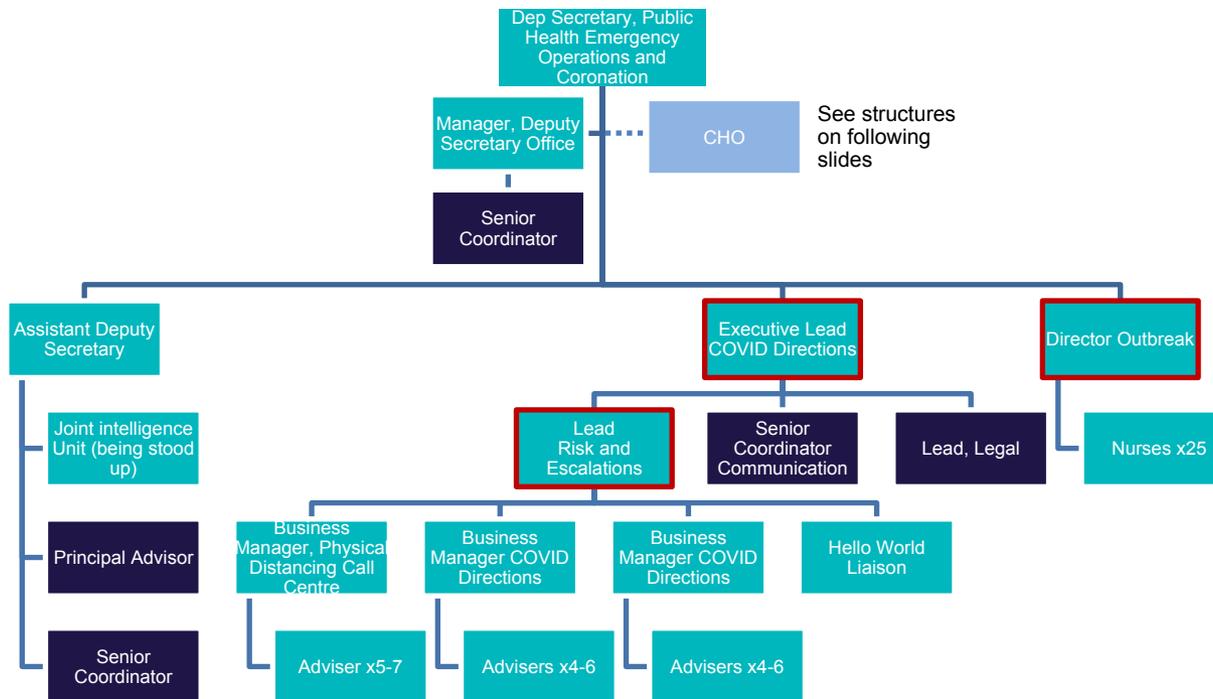

# Public Health Command

## Public Health Emergency Operations and Coordination

### Notes

- Excluding structures below the CHO, there are approximately 30 jobs, plus nurses, excluding new intelligence function. Up to 70 staff rotate through this structure
- Outbreak team currently being stood up.
- Joint intelligence unit is currently being stood up and will draw on existing intelligence unit.
- Up to 25 nurses are sourced from various places.
- Critical need for resources under COVID Directions as Hello World contract continues to be reviewed.
- Additional capacity to support whole go government work is being considered under COVID Directions.

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- Overall structure involves approximately 90 jobs.
- ~80 of these jobs are in Cell 1 and 2, although, ~190 staff rotate through these roles given the rostered nature. Generally these roles are sourced via DHHS/VicGov (e.g. ~16 staff in Team Leader roles are from RHPem) (i.e. HP CDPC) and others are filled via external agencies (e.g. Cabrini).
- Medical advice line is shared 1 day per person from Strategy team.

- There are approximately 40 jobs, although, up to 65 staff rotating through this structure

# Public Health Command

## Workforce considerations

| Profile and high level issues   | Bulk v individual roles   | Sourcing challenges  | Forecasted supply and demand  |
|---|---|--|---|
| <p>Structure includes a combination of bulk roles (epidemiologist, intelligence surveillance, informatics, investigations), generalist (coordination and logistics) and specialist roles (medical practitioners on information lines).</p> <p>Up to 24/7 operations require high volume of staff and creates complex workforce arrangement (i.e. rostering, turnover, training etc.).</p> <p>Predominant source of operational staff is from Health Protection (epidemiologist, environmental health officers from communicable diseases and other areas) and Prevention and Population Health.</p> <p>There is considerable agency hire and from hospitals (e.g. nursing staff) and VISA appointments.</p> | <p>Executive roles overseeing operational and policy roles:</p> <ol style="list-style-type: none"> <li>1. Several executives (Simon, Kira, Bruce, Fin, Nicole, Katherine and AvD).</li> </ol> <p>Bulk roles performing both operational and operational policy roles:</p> <ol style="list-style-type: none"> <li>1. Epidemiologist</li> <li>2. Disease surveillance</li> <li>3. Case contact and tracing officers</li> <li>4. Data and informatics</li> <li>5. Physicians, nurses, GPs</li> </ol> | <p>Several executives who normally provide BAU leadership in RHPEM are 100% dedicated to the PHC.</p> <p>The supply line from other Victorian Government agencies, health services, universities, local councils (e.g. AOs') is likely to reduce as restrictions are lifted.</p> <p>BAU staff from RHPEM and across the department and VPS have been drawn on to support COVID-19, although, continue to have BAU commitments which create a gap and organisational risk.</p> <p>AOs are sourced from various channels and subject to fluctuating demand, as well as necessary onboarding delays (e.g. screening).</p> | <p>Even short term COVID-19 response is assumed to be months, therefore there are considerable BAU risks and sourcing challenges ahead (highlighted in sourcing challenges).</p> <p>A paper submitted to the Missions Coordination Committee (21 May 2020) outlines workforce pressures, highlighting how contact tracing, infection prevention and control and outbreak squads will grow considerably. It explains how there will be continued demand for data interpretation and reporting skills, project managers and officers, communications staff, and other logistics and business support.</p> |

# Public Health Command

## Key features and design considerations

| Focus   | Items to be worked through...   |
|---|---|
| <ul style="list-style-type: none"> <li>• Large and growing workforce with several rostering requirements to meet varying operational needs.</li> <li>• Workforce source is combination temporary 'lift and shift' of DHHS functions, individual secondments or assignments and external agency hire (health service and generalist).</li> </ul> | <ol style="list-style-type: none"> <li>1. Urgent role design and work value assessment to be undertaken to inform recruitment strategy and pipeline management. Risks exist where substantive roles are not being filled in many of the teams (e.g. staff in the Pathology and Infection Prevention and Control team) and also the placement of people in roles that they are not suited to.</li> <li>2. High operational workforce has lower level classified roles and staff. On balance, the volume and ratio of senior to junior roles is low (i.e. arguably not enough senior staff at VPS5, VPS6 and executive level, particularly given the profile of the work and ministerial interaction).</li> <li>3. There is limited support for executive, ministerial, budget management and coordination support for each public health commander (particularly the 2-3 areas with high volumes of staff).</li> <li>4. Confirmation of placement of outreach function (was being established in the Pathology and Infection Prevention and Control team).</li> <li>5. Profile and future focus on Outbreak Response in Case, Contact and Outbreak Management may need to be elevated to the report to the deputy commander role.</li> <li>6. Reporting lines for management in the Physical Distancing Hotline need to be clarified and embedded, with consideration to the public health significance of this pandemic.</li> </ol> |

# Public Health Command

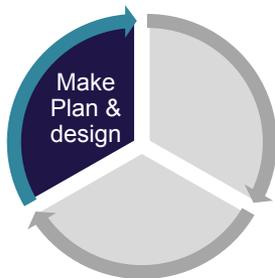

## Key tensions to resolve

| Focus   | Items to be worked through...   |
|---|---|
| <p>Several design, workforce supply and demand and transition issues need to be addressed</p> | <ul style="list-style-type: none"><li>• The tension between emergency management response and global public health crisis has created governance issues as they relate to the accountability for enforcement and compliance, operations and public health response, including some confusion about accountabilities and reporting lines</li><li>• Timing and tenure of individual roles and appointments remains unclear for individuals, creating business risk (e.g. retention) and personal risk (e.g. uncertainty).</li><li>• Decision to resource and/or expand rostering support / teams to other emergency response teams.</li><li>• Urgency for a dedicated workforce plan that considers supply management, noting the concern that availability of workforce from agency hire, hospital, students and other external sources (including AOs) will reduce as restrictions are lifted (i.e. people go back to their day jobs). This will also create risks associated with turnover (e.g. retraining, business continuity etc.)</li><li>• High volume of staff from Health Protection in RHPem creating a BAU risk.</li><li>• Technical nature of some roles not readily available through existing supply lines (e.g. Critical Skills Register leading to reliance on external agency hire). This includes epidemiologist, lab staff etc.</li><li>• Some capability / skill / content gaps in policy development (e.g. in the Physical Distancing team).</li></ul> |

# Public Health Command

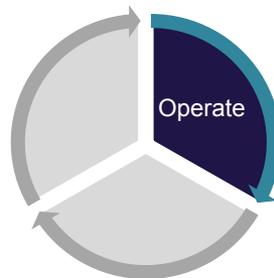

## Core capabilities in regulatory cycle

Description of roles and functions that fit within each part of the regulatory cycle TBC by PHC.

Functions/roles: TBC

- Identify the problem and options for an appropriate response
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

Functions/roles: TBC

- Process and operational policy design
- Managing Probity
- Making evidence based regulatory decisions
- Regulatory Information, intelligence and data management
- Resource planning
- Stakeholder management and education
- Complaints management
- Monitor compliance
- Responding to non-compliance
- Significant breaches and adverse events

Functions/roles: TBC

- Monitor and assess regulatory performance
- Adjust and improve ongoing regulatory performance
- Regulatory reform and review

# Appendices

## Supporting information

1. Job cards
2. Stakeholders engaged

# Job Cards

## Enforcement and Compliance

# Job card - Commander Enforcement and Compliance

## Accountabilities

- Overall leadership and management of the COVID-19 enforcement and compliance function within DHHS, including oversight of compliance matters under all public health directions, recruitment, management and occupational health and safety.
- Overall stewardship for COVID-19 enforcement and compliance legislation, protocols and data pertaining to enforcement and compliance matters.
- Provide authoritative advice and input into complex compliance matters, including support to the Chief Health Officers and delegates on compliance and enforcement related matters.
- Conduct daily review of those subject to detention and provide advice and guidance on necessary actions to be taken.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, emergency operations, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational compliance policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance compliance, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact compliance policy and operations.

## Capabilities

- Identify regulatory problem and set out options for appropriate response.
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

## Specialist expertise

- Senior level experience in government regulatory policy development and implementation, contemporary regulatory practice and translation of legislative into operational effectiveness.
- An understanding of the Victorian health and human services system and associated regulation.
- Proven experience operating within a rapidly changing environment, so we need to marry.

# Job card – Deputy Commander AO Operations

## Accountabilities

- Overall leadership and delivery of regulatory operational function as it relates to the departments COVID-19 enforcement and compliance response.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, emergency operations, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational compliance policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance compliance, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact compliance policy and operations.

## Capabilities

- Identify regulatory problem and set out options for appropriate response.
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

## Specialist expertise

- Senior level experience in government regulatory policy development and implementation, contemporary regulatory practice and translation of legislative into operational effectiveness.
- An understanding of the Victorian health and human services system and associated regulation.
- Proven experience operating within a rapidly changing environment, so we need to marry.

## Job card – Senior Authorised Officer (e.g. Team Leader)

### **Accountabilities**

- Lead a multi-disciplinary team, that ensures DHHS responsibilities under the Public Health and Wellbeing Act 2008 with respect to the physical distancing controls and directions are delivered effectively, efficiently and that any issues are escalated appropriately.
- Hotel cell: Ensure passengers/guests/client are compliant with detention notices and physical distancing policies; Detention notices are updated as required; Manage transfers requests to leave, and exit process and protocols; Escalate issues.
- Airport cell: Ensure passengers are served detention notices lawfully; compliant with detention notices and physical distancing policies; and triaged and transported appropriately.
- Release AOs: Carry out the release process for releasing people from quarantine.

### **Capabilities**

- Team supervision
- People management skills

### **Specialist expertise**

- Working knowledge of the Public Health and Wellbeing Act 2008 with respect to the physical distancing controls and directions

# Job card – Manager Policy and Protocols (VPS6)

## Accountabilities

- Provide high quality business intelligence, authoritative advice and sound policy recommendations to senior management and government based on comprehensive research.
- Oversee the development of policy and initiatives that meet government and departmental objectives within resourcing, timeline and budget parameters.
- Review and report on high priority issues, risks and trends and prepare and present comprehensive reports, ministerial briefs and cabinet and agency submissions on complex issues.
- Pro-actively build and maintain effective working relationships and facilitate the flow of information across the department and with key external stakeholders.
- Maintain an understanding of Commonwealth and State legislative and policy reform directions to influence policy development.
- Represent the department on key stakeholder committees and groups concerned with achieving government and departmental objectives, lead relevant committee and governance processes.
- **Keep accurate and complete records of your work activities in accordance with legislative requirements and the department's records, information security and privacy policies and requirements.**
- **Take reasonable care for your own health and safety and for that of others in the workplace by working in accordance with legislative requirements and the department's occupational health and safety (OHS) policies and procedures.**
- **Demonstrate how the actions and outcomes of this role and work unit impact clients and the department's ability to deliver, or facilitate the delivery of, effective support and services.**

## Capabilities

- Team supervision
- People management skills

## Specialist expertise

- A tertiary qualification in fields related to emergency management, community services, health administration or business management would be desirable.

# Job card – Exemptions

## ***Team Leader Complex***

- Oversee the day to day work of the Case Managers (Category 2): provide direction and guidance to case managers, review evidence, ensure quality of advice and briefs to support senior executive decision making.
- Manage complex and sensitive liaison with multiple parties.
- Alert Manager, Exemptions to any issues of risk, particularly relating to the welfare of people in quarantine, and including resource management and rostering issues.

## ***Team Leader Non Complex***

- Oversee the day to day work of the Case Managers (Category 1): provide direction and guidance to case managers, review evidence, ensure quality of exemption letters and advice and briefs to support senior executive decision making, escalate issues to Manager as appropriate, ensure consistency and timeliness of urgent matters.
- Alert Manager, Exemptions to any issues of risk, including resource management and rostering issues.

## ***Both***

- Work creatively and analytically in a problem-solving environment demonstrating teamwork, innovation and excellence.
- Provide leadership and motivate case managers to meet team goals, adhering to their responsibilities and milestones.
- Work collaboratively with other Team Leaders to support the shared objectives of the Exemptions team and broader Compliance Cell.

## **Capabilities**

- People management and/or team leader experience desirable
- Strong people skills in challenging, high volume and fast paced environments.
- Excellent attention to detail and time management skills with the ability to multi-task.
- Problem solving skills.
- Good written and verbal communication skills (experience in having difficult conversations and/or delivering difficult information would be desirable).

## **Qualifications**

- A tertiary qualification in policy, law or business, or in fields related to emergency management, community services, health administration or business management.

# Job Cards

## Emergency Accommodation

# Job Card – Commander, Operation Soteria

## Accountabilities

- Overall leadership and management of the COVID-19 detention accommodation & ports of entry functions within DHHS, including oversight of strategy, health & wellbeing of detained people, operational matters, recruitment, management and occupational health and safety.
- Coordination and approval of operational policy & standard operating procedures pertaining to Operation Soteria.
- Provide authoritative advice and input into complex emergency operations matters.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, enforcement and compliance, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance the emergency operation, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact operations.
- Oversee data quality, management, quality assurance and reporting

## Capabilities

- Proven senior executive experience operating within a rapidly changing environment.
- Demonstrated experience in managing a multi disciplined workforce.
- Outstanding communication skills and the ability to foster relationships with partner stakeholders.

## Specialist expertise

- An understanding of the Victorian health and human services system, legislation, policies and associated regulation.
- Demonstrated experience in working in an Emergency Operations Centre or supporting an emergency event.
- Government Services delivery and leadership experience.

# Job Card - Deputy Commander, Hotels

## Accountabilities

- Leadership and operational management of the COVID-19 quarantine accommodation function within DHHS.
- Manage a multi-disciplinary team, that ensures DHHS responsibilities under the *Public Health and Wellbeing Act 2008* with respect to the physical distancing controls and direction notices are adhered.
- Provide oversight and quality assurance mechanisms to deliver high quality, safe and effective care to persons in mandatory quarantine.
- Active consultation with the Deputy Commander, Welfare and Clinical Governance Commander to ensure care provided to passengers is safe, appropriate and represents best practice within the clinical governance framework.
- Promotes safety leadership to ensure the health and wellbeing of DHHS staff, and staff from other agencies contracted who are undertaking activity at the hotel.
- Lead the development of operational policy & standard operating procedures pertaining to Hotel Accommodation.
- Provides the Commander, Operation Soteria with situational awareness and intelligence to inform emerging issues and appropriate risk management.
- Provide authoritative advice and input into complex welfare and human service matters.
- Work collaboratively with all stakeholders to ensure all optimal outcomes for guests in mandatory quarantine.

## Capabilities

- Proven experience operating within a rapidly changing environment.
- An ability to work in high emotion environment.
- Manage a multi-disciplined team.

## Specialist expertise

- An understanding of the Victorian health and human services system, legislation, policies and associated regulation.
- Experience in working within a Clinical Governance Framework.
- Government Services delivery and leadership experience.

# Job Card - Deputy Commander, Ports of Entry

## Accountabilities

- In partnership with the Commonwealth Department of Agriculture, Water and Environment (DAWE) Biosecurity staff, implement border health measures for all travellers returning from overseas to Victoria.
- Oversee the adherence and enforcement functions and procedures for the direction and detention for Airport and Maritime Arrivals issued under *the Public Health and Wellbeing Act 2008*.
- Oversee the logistics of travellers that arrive at Victorian airports and maritime ports to their designated quarantine hotel.
- Oversee the implementation of Exemptions to the General Quarantine Policy for transitional passengers.
- Support the Commander, Operation Soteria participate in the *Managing Returns to Australia Working Group*.
- Lead the development of operational policy & standard operating procedures pertaining to Ports of Entry.
- Provide authoritative advice and input into complex matters to ensure the health and safety of travellers.
- Work collaboratively and liaise with external stakeholders at the Airport to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, AFP, DAWE, AV DFAT, DoT, Airport Chaplain and other jurisdictions as required.

## Capabilities

- Proven experience operating within a rapidly changing environment.
- Ability to work in a high emotion environment.
- Demonstrated experience in leading Multi Disciplined Incident Management Teams.

## Specialist expertise

- An understanding of the Victorian health and human services system, legislation, policies and associated regulation.
- Demonstrated experience in working in an Emergency Operations Centre or supporting an emergency event.
- Knowledge of Airport and Maritime operations, procedures and policies would be advantageous.

# Job Card - Deputy Commander, Welfare

## Accountabilities

- Oversee the Department's Welfare & CART Teams to ensure the needs of travellers and their families are met during the mandatory quarantine period.
- Ensure health and welfare screening take place soon after arrival so that existing and emerging health and welfare concerns can be risk assessed and addressed in a timely manner.
- Partnering with travellers, healthcare providers and other Victorian departments to facilitate effective engagement, coordinate support and timely effective care.
- Active consultation with the Deputy Commander, Hotels and Clinical Governance Commander to ensure care provided to passengers is safe, appropriate within the context of mandatory quarantine.
- Manage the completion of psychological assessments required to support Detention Exemption applications and Financial Hardship bridging accommodation applications.
- Ensure continuous review of systems and practices to promote continuous learning.
- Provision of a daily welfare report to the Commander, Operation Soteria to ensure oversight and accountability for the mandatory quarantine process.
- Lead the development of operational policy & standard operating procedures pertaining to Welfare for travellers.

## Capabilities

- Demonstrated experience in leading multi-disciplined teams.
- Proven ability in decision making in a complex environment.
- Proven experience operating within a rapidly changing environment.
- Ability to work in a high emotion environment.

## Specialist expertise

- An understanding of the Victorian health and human services system, legislation, policies and associated regulation.
- Qualifications or extensive experience in working within a health related environment.
- Demonstrated experience in working within a Clinical Governance Framework and applying Public Health Standards and the Charter of Human Rights.

# Job Card - Clinical Lead (Mandatory Quarantine)

- Ensure that the public health standards for the care of returned travellers in mandatory quarantine are upheld
- Advise, Liaise and develop policy with Public Health Command (Physical Distancing Cell) and the EOC and assist the EOC to operationalise this policy

## Capabilities

### Specialist expertise

- MD/MBBS or RN1 (Clinical Nurse Specialist or Consultant) VPS6
- Favourable fellowship of speciality Australasian college/faculty (e.g RACGP or FACEM preferred) (VPS6.2 or SMA) and/or recent clinical experience and/or clinical governance experience

# Job Card – Welfare Line, Operations Manager

## Accountabilities

- Ensure the efficient and effective operations of shifts within the Welfare Check shift, including supervision and support to up to four team leaders and their staff.
- Perform all operational duties associated with the Welfare Line, including adequate rostering and resourcing, preparation of call list for next shift (as applicable), appropriate sign off on team member time sheets, beginning and end of shift briefing for all staff, OHS obligations are being met during shifts.
- Ensure Welfare Check Officers and team leaders are equipped with the relevant tools and aware of supports available to members of the community, including access the departments nominated interpreting service to ensure information is provided in a culturally responsive and equitable way.
- Ensure all team leaders and staff are briefed accordingly at the beginning of shifts and that regular work in progress standards are met during shifts.
- Ensure each team has an allocated Team Leader and allocate call list to Team Leaders
- Ensure that orientation of new team leaders and Welfare Line Officer, to ensure that all members of the team are able to perform their role.
- Ensure continuity and workflow across teams and shifts from day to day, including quality control over matters relating to email queries and outstanding tasks/ referrals as handed over from previous shift.
- Identify and respond to issues as they arise during the shift as they relate to service delivery, systems, staff and escalate issues to the Manager, Welfare Line as necessary

## Capabilities

- Operates effectively in a fast-paced and changing environment
- Communicates risk and risk-related concepts verbally
- Work confidently with individuals with a range of vulnerabilities
- Adaptable and uses initiative
- Emotionally regulated
- Resilient

## Specialist expertise

- A recognised tertiary qualification in social work, community services or a similar welfare or behavioural related qualification; or
- A recognised Diploma of Community Services Work, or similar qualification which is studied over a minimum of two academic years of full-time study (or part time equivalent)

# Job Card – CART Practitioners

## Accountabilities

- Risk assessment and analysis - gathers information through a variety of sources and technologies in order to identify, plan and respond to the psychosocial risks relating to each situation. Applies a strong risk lens, professional judgement, and evidence informed frameworks to analyse the available evidence and inform decision making.
- Case Support – provides secondary consultation and manages complex cases. Draws insights from assessment and analysis to formulate a meaningful and effective case plan, including safety plans, and reviews case progress and outcomes with a strong focus on managing dynamic risk. Collaborates with others to ensure adequate risk management and robust referral pathways that are tailored to individual needs and circumstances.
- Critical enquiry - uses evidence based frameworks to investigate issues, and is able to understand the root cause of each issue as well as the potential implications.
- Standardised reporting - uses standardised tools and reporting frameworks when recording case data, and when documenting care solutions provided.
- Reflective practice - critically reflects on what they are doing in their role and uses this reflection to influence their practice. Supports other practitioners in individual and group reflective practice supervision.

## Capabilities

- Identifies risks to individuals
- Understands the relevant legislative and statutory frameworks
- Operates effectively in a fast-paced and changing environment
- Communicates risk and risk-related concepts verbally

## Specialist expertise

- A recognised qualification in social work, community services or a similar welfare or behavioural related qualification; or
- A recognised Diploma of Community Services Work, or similar qualification which is studied over a minimum of two academic years of full-time study (or part time equivalent) and includes a practical component such as counselling or case work practice
- A current Working with Children Check (WWCC) card.

# Job Card – Hotel Site Lead

## Accountabilities

- Oversee the operations at the hotel within these functions to ensure care of travelers in mandatory quarantine:
- Ensure a safe environment for people returning from overseas who are required to enter a period of compulsory quarantine at the hotel.
- Provide leadership, direction and support for staff in a multidisciplinary environment.
- Contribute to the development and implementation of policies and processes to support running of hotel and wellbeing of guests
- Coordinate welfare and relief supports to those in quarantine.
- Manage and make complex decisions in time critical situations and escalate issues that cannot be resolved at the local level to the Emergency Operations Centre for resolution.
- Lead support staff duties and activities onsite at the hotel.
- Effectively build relationships and work collaboratively with hotel management and staff, authorised officer, medical staff, security, other government departments and Victoria Police onsite at the hotel.
- Oversee the check in/out process for guests returning to Australia.

## Capabilities

- Identifies risks to individuals
- Understands the relevant legislative and statutory frameworks
- Operates effectively in a fast-paced and changing environment
- Communicates risk and risk-related concepts verbally
- Works in operational environment with multiple stakeholders

## Specialist expertise

- A recognised qualification in social work, community services or a similar welfare or behavioural related qualification; or
- Emergency management and/or regulatory experience in an operational environment.

# Job Cards

## Public Health Command

# Job card – Chief Health Officer

## Accountabilities

- Victoria's Chief Health Officer is responsible for the provision of public health advice to the Minister, the Department of Health and Human Services and the Victorian community including the exercise of statutory powers under the Public Health and Wellbeing Act 2008.
- The Chief Health Officer is expected to provide high level leadership and vision for public health in Victoria and will have experience in public health programs at a State or National level.
- The role requires strong capability and engagement with technical experts and leaders across both government and the broader health sector. The Chief Health Officer is required to be proactive and systematic in the approach to dealing with complex problems and has an innate ability to understand and operate in a government environment.
- The Chief Health Officer is the government's spokesperson on matters relating to public health and must be a confident public persona with excellent judgement, communication skills, and an ability to be trusted.

## Capabilities

- Leadership
- Communication skills
- Influence and negotiation
- Problem solving
- Self-management

## Specialist expertise

- Current registration as a medical practitioner with the Australian Health Practitioner Regulation Agency.

## Job card – Deputy Chief Health Officer

### Accountabilities

- The Deputy Chief Health Officer is a senior clinical leadership role providing authoritative advice and leadership in supporting the Chief Health Officer, Deputy Secretary and Secretary and staff in the Health Protection Branch. The role will act in place of the Chief Health Officer for periods of leave and rostered weekend relief. As the Deputy Chief Health Officer, you will participate in emergency management activities, contribute to the coordination of the prevention and response to public health incidents and represent the department on state and national committees as required.
- The position oversees five teams comprising approximately 80 staff: Immunisation, Communicable Disease Prevention & Control, Communicable Disease Epidemiology & Surveillance, Public Health Medical and Partner Notification & Support.

### Capabilities

- Leadership
- People management
- Communications skills
- Influence and negotiation
- Problem solving

### Specialist expertise

- Current registration as a medical practitioner with the Australian Health Practitioner Regulation Agency
- Postgraduate qualification in Public Health and Fellowship of the Australasian Faculty of Public Health Medicine

# Job Card - Deputy Public Health Commander Intelligence

## Accountabilities

- Overall leadership and management of intelligence section within DHHS, including oversight of operational matters, recruitment, management and occupational health and safety.
- Overall stewardship for COVID-19 emergency operations, protocols and data pertaining to the emergency operations.
- Provide authoritative advice and input into complex emergency operations matters.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, enforcement and compliance, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance the emergency operation, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact operations.

**Subject:** Monday's directions

Annaliese

There are three directions we continue to work on this weekend:

- \* restricted activities - greater retail bans and restricted health practices
- \* stay at home - mainly clarifications
- \* disability homes - expansion of the visitor limitations

I expect we will be asking you to read those and the accompanying brief tomorrow as the directions should be signed before Monday morning. Ahead of that Counsel has recommended that we set out in an attachment to the brief the reasons for the material changes needed. I think this was also something you were keen to have done.

Could I suggest I repurpose Finn's early physical distancing document and highlight the areas where I think some more focussed input is needed from a public health perspective? Perhaps I could send that back and either Finn or someone else from the team (or you...?) could progress? If no-one has capacity, I am happy to take your thoughts by phone and work it up.

I will have a draft to you in the next 2 hours.

Apologies for the extra work but I think it is a good idea to support the decision making process. Please let me know if anyone else should be copied.

Regards

**Jacinda de Witts**

## Background

In Victoria, the term 'physical distancing' will be used, in preference to the term 'social distancing'.

A recent summary of the value of social distancing in relation to the COVID-19 emergency was given as:

*“Social distancing is one of the key measures currently being utilised to contribute to Australia’s ability to severely limit transmission of COVID-19. This reduces the burden of disease in the community, and importantly, will ensure healthcare capacity is not overwhelmed at any given time. The health sector must continue to undertake its core functions, as well as maintain the capacity to support those with COVID-19 who require more intensive care.*

*The overarching goal of our recommendations is to slow the spread of the virus and flatten the epidemic curve. We all have both a community and individual responsibility to maintain social distancing and minimise interactions in order to protect the people we love. The aim is a population response, to reduce transmission to protect vulnerable populations.”*

## Purpose

This plan intends to:

- Provide clarity to all parts of the Department of Health and Human Services' (the department's) physical distancing response to coronavirus disease 2019 (COVID-19);
- Describe the strategy and protocols for the physical distancing response;
- Describe the compliance and enforcement policy for all directions, including mandatory detention policy;
- Inform internal and external communications collateral around physical distancing.

## Scope

In scope for this policy are:

- Physical distancing interventions in Victoria;
- Quarantine and isolation interventions in Victoria implemented for any reason.

## Authorising environment

### Chief Health Officer and Deputy Chief Health Officer

Under a state of emergency declared by the Victorian Government, the Chief Health Officer and Deputy Chief Health Officer have exercised powers to make a range of Directions that reflect physical distancing controls in Victoria, as described in Annexes to this plan.

### Emergency Management Commissioner and State Controller

State Controller (Class 2) is appointed to coordinate the overall response, working within the emergency management arrangements.

### National Cabinet

National Cabinet for COVID-19 has released statements of policy on social distancing (physical distancing). These are reported to have been based on advice from the Australian Health Protection Principal Committee (AHPPC). The AHPPC releases its advice in statements which are published online.

### Victoria Police

Advice has been sought from Legal Services as to the role of Victoria Police. As of 31 March 2020, Victoria Police will undertake a greater role in managing compliance in the community including issuing of infringement notices. As a result, the role of DHHS authorised officers in specific support to Victoria Police around compliance checks will

reduce as Victoria Police have a range of powers considered sufficient to investigate, including to issue infringements and fines.

## **Governance of physical distancing policy within the DIMT**

A Physical Distancing Cell will be chaired by the Deputy Public Health Commander – Planning, on behalf of the Deputy Chief Health Officer (Public Health Commander). This will include:

- a communications lead;
- an enforcement and compliance lead, and
- an evidence and policy lead.

## **Policy on control measures for physical distancing**

### **AHPPC recommendations to National Cabinet**

#### **Statements by AHPPC**

The Australian Health Protection Principal Committee (AHPPC) have made a number of statements on the matter of physical distancing (social distancing). These are available at TRIM location HHSF/20/7891, and on the web at <https://www.health.gov.au/news/latest-statement-from-the-australian-health-protection-principal-committee-ahppc-on-coronavirus-covid-19-0>

The most recent AHPPC statement was 30 March 2020.

### **National requirements from National Cabinet**

The National Cabinet has made announcements through the Prime Minister, including a statement relating to social distancing on 24 March and as recently as 30 March 2020.

### **Legal directions under emergency powers in Victoria**

#### **Directions work within legal services**

A team within the department's Legal Services Branch has been established, including order to draft Directions under the state of emergency, for the Chief Health Officer and Deputy Chief Health Officer. The Legal Services Branch is not available to provide third party legal advice on Directions and their compliance or otherwise.

#### **Process for creating Directions**

The process involves a number of steps, some of which are iterative as the policy underlying the Direction is developed.

These steps include – but are not limited to –

- Policy area develops a need for a Direction under the state of emergency;
- Legal services commence work to create instructions;
- Secretary finalises required directions content to Legal Services;
- Legal Services instructs parliamentary counsel to draft instructions;
- Final check undertaken with Chief Health Officer or Deputy Chief Health Officer;
- Direction is signed;
- Direction is published on the webpage;
- A communications approach is initiated, including a press release and frequently asked questions.

## Critical step in creation of Directions

The Deputy Chief Health Officer has identified a minimum requirement for an evidence-informed policy rationale to be recorded prior to the issuing of directions, and that this evidence-informed rationale extends beyond the general observation of a state of emergency having been declared. Such a short evidence summary could be produced by the Intelligence function.

## Directions

At the current time, Directions and detention orders are generally signed by Dr Annaliese van Diemen (Deputy Chief Health Officer) as authorised by the Chief Health Officer.

Consideration is being given to expanding the list of authorised officers who can sign directions to include other Senior Medical Advisors within the response who are Authorised Officers.

## List of Directions

The following directions are displayed on the department's website at <https://www.dhhs.vic.gov.au/state-emergency> and were made by the Deputy Chief Health Officer or Chief Health Officer:

- *Direction on airport arrivals (Annex 1) – 18 March 2020 (revoked 30 March 2020 - still displayed for reference);*
- *Direction on cruise ships docking (Annex 2) – 19 March 2020 (revoked 30 March 2020 - still displayed for reference);*
- Direction on aged care (Annex 4) – 21 March 2020;
- Direction on hospital visitors (Annex 6) – 23 March 2020;
- Direction on isolation (diagnosis) – 25 March 2020;
- Direction on revocation of airport arrivals and cruise ship directions – 28 March 2020;
- Direction on detention notice – Undated (first posted 28 March 2020);
- Direction on stay at home – 30 March 2020;
- Direction on restricted activity – 30 March 2020.

## Summary of legally required actions in Victoria with a focus on physical distancing

The Directions in place are available online, and at the TRIM location HHSF/20/7901.

The summary of the key requirements in all seven active directions, across four themes, is below (linking to the Direction itself for more detail).

### Directions on visitors to aged care facilities – 21 March 2020

- Prevents entering or visiting aged care facilities unless goods and services are necessary, and if the person meets criteria for a suspected case or is ill or is not up to date with vaccination or is under 16;
- Some exemptions including employee, care and support, end of life visit.

### Directions on hospital visitors – 23 March 2020

- Prohibits non-essential visits to hospitals, including for categories of patients, workers and visitors;
- Exceptions include patients. Exemptions can be granted.
- Prohibits non-essential business operation from noon on 23 March 2020, including for pubs, hotels, gyms,

### Directions on isolation – 25 March 2020

- Prohibits movement out of isolation until a person is no longer required to be in isolation by DHHS but allows a person not in their home to go directly there after diagnosis.

### Direction – detention notice – 27 March 2020

- Orders the detention of all persons who arrive into Victoria from overseas on or after midnight on 28 March 2020, requiring they be detained in a specified room in a hotel, with only limited reasons wherein leaving the room can be allowed.

Direction on stay at home – 30 March 2020

- Restricts the way by which people can leave their home making an effective requirement to stay at home except in certain circumstances, restricts gatherings to two people in most instances with some exceptions.

Direction on restricted activity – 30 March 2020.

- Expands restrictions on certain businesses and undertakings put in place as part of non-essential activities restrictions, for example to include playgrounds.

**Directions that have been revoked**

The following Directions have been issued but have been revoked. Information is included for reference.

Direction on airport arrivals -18 March 2020

- *Anyone who arrives at an airport in Victoria on a flight that originated from a place outside Australia, or on a connecting flight from a flight that originated from a place outside Australia must self-quarantine for 14 days after arrival, if arrived after 5pm on 18 March 2020;*
- *Sets rules on being in quarantine – cannot leave home except in an emergency and cannot allow people to enter unless they live there.*

Directions on cruise ship docking – 19 March 2020

- *Anyone who disembarks at a port in Victoria from an international cruise ship or an Australian cruise ship (which is on a voyage from a port outside Australian territory) must self-quarantine for 14 days after arrival.*
- *Allows for some exceptions (goes interstate directly, or to hospital).*

Directions on mass gatherings – 21 March 2020

- *Non-essential mass gatherings are prohibited (not allowed to be organised, allowed or attended). A mass gathering means:*
  - *A gathering of five hundred or more persons in a single undivided outdoor space at the same time;*
  - *A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.*
- *In addition, the total number of persons present in the indoor space at the same time does not exceed the number calculated by dividing the total area (measured in square metres) of the indoor space by 4, meaning a limit of one person per four square metres (2x2m).*
- *Many specified exemptions, including for some forms of transport, schools, prisons, Parliament or where CHO or DCHO issue an exemption.*

Directions on non-essential business closure – 23 March 2020

- *Prohibits non-essential business operation from noon on 23 March 2020, including for pubs, hotels, gyms, places of worship, other specified businesses;*
- *No exemptions process is specified – it is an inclusive list.*

Directions on prohibited gatherings – 25 March 2020

- *Non-essential gatherings are prohibited from midnight on 25 March 2020 – not to be organised, allowed or attended.*
- *Adds two additional prohibited mass gatherings which are social sport gatherings and weddings and funerals.*
- *Specifies a density quotient, with examples.*
- *A mass gathering means:*
  - *A gathering of five hundred or more persons in a single undivided outdoor space at the same time;*
  - *A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.*
- *Many specified exemptions, including social sport gatherings (two or more people), weddings, and funerals (no more than 10 people – indoors or outdoors), some forms of transport, schools, prisons, Parliament or where CHO or DCHO issue an exemption.*
- *Allows for exemptions to be asked for and granted.*

### Directions on non-essential activities – 25 March 2020

- Prohibits categories of non-essential activity;
- Adds requirement for signage, cleaning and disinfection on businesses that remain open;
- Includes prohibition on licensed premises, personal training facilities, outdoor personal training limited to ten persons, entertainment facilities, non-essential retail facilities, food and drink facilities, accommodation facilities, swimming pools, animal facilities, auctions;
- Exceptions include essential public services such as food banks, wedding venues, recording of performances, time-limited haircuts, delivery of goods, densely packed markets (density rule), food and drink facilities in certain places (hospitals for example); some types of accommodation facility.

## **Announced stages of restrictions in Victoria**

### **Stage 1 restrictions**

Victoria announced 'stage 1 restrictions' on 22 March 2020 and 23 March 2020 and implemented effective midday 23 March 2020. These included:

- Bringing school holidays forward to commence starting on Tuesday 24 March;
- Ceasing non-essential business activity including:
  - pubs, bars or clubs, or hotels (other than to operate a bottleshop, take-away meals or accommodation),
  - gyms,
  - indoor sporting centres,
  - the casino,
  - cinemas,
  - nightclubs or entertainment venues of any kind,
  - restaurants or cafes, other than to the extent that it provides takeaway meals or a meal delivery service
  - places of worship, other than for the purposes of a wedding or funeral.

<https://www.premier.vic.gov.au/statement-from-the-premier-32/>

<https://www.premier.vic.gov.au/statement-from-the-premier-33/>

<https://www.premier.vic.gov.au/wp-content/uploads/2020/03/200323-Statement-From-The-Premier-1.pdf> (this includes a copy of the Deputy Chief Health Officer direction)

### **Stage 2 restrictions**

Stage 2 restrictions were announced on 25 March 2020. Further to the stage 1 restrictions, these further restrictions include:

- Ceasing operation of:
  - Recreation facilities (indoor and recreation facilities, personal training facilities, community centres and halls, libraries, galleries and museums, youth centres and play centres (other than for essential public services);
  - Entertainment facilities (in addition to entertainment facilities already covered in stage 1, stage 2 added theatres, music and concert halls, auditoriums, arenas, stadiums, convention centres, arcades, amusement parks, gambling businesses, brothels, sex on premises venues, and strip clubs);
  - Non-essential retail facilities (beauty and personal care, auction houses, market stalls - other than for the provision of food and drink and subject to density provisions);
  - Food and drink facilities (in addition to stage 1, stage 2 added fast food stores, cafeteria's and canteens, and food courts) but maintaining the ability to provide take away;
  - Camping grounds and caravan parks;
  - Swimming pools (other than private pools not for communal use);
  - Animal facilities (zoos including petting zoos, wildlife centres, aquariums or animal farms not for food production);

- Real estate auctions (other than remotely) and inspections (other than by appointment);
- Introduced a density quotient for retail facilities of 1 per 4m<sup>2</sup> and increased cleaning requirements;
- Introduced a restriction social sport gatherings;
- Limited attendees at weddings (5 people) and funerals (10 people).

Prohibits operation of non-essential businesses and undertakings to slow spread. Cafes and food courts must stop providing table service, but may continue to offer delivery and takeaway. Cafes and canteens may continue to operate at: hospitals, care homes and schools, prisons, military bases, workplaces (though only as a takeaway service). Auction houses, real estate auctions and open house inspections, non-food markets, beauty and personal care services.

<https://www.premier.vic.gov.au/wp-content/uploads/2020/03/200325-Statement-From-The-Premier-1.pdf>

### **Stage 3 restrictions**

These restrictions came into effect at midnight on 30 March 2020, and are:

- Gatherings are restricted to no more than two people except for members of your immediate household and for work or education purposes;
- Requirement to stay home will become enforceable;
- Playgrounds, skate parks and outdoor gyms will also close;
- There are only four reasons to be out:
  - Shopping for what you need – food and essential supplies;
  - Medical, care or compassionate needs;
  - Exercise in compliance with the public gathering requirements;
  - Work and study if you can't work or learn remotely;
- Moratorium on evictions introduced;
- Rules for weddings (no more than five people to attend) and funerals (no more than ten people can attend).

### **Essential services and non-essential services**

A listing of the Victorian classification of essential compared to non-essential is under development.

### **Summary of strong recommendations in Victoria on physical distancing (should) – top lines**

In addition to Directions, the Chief Health Officer provides a number of strong recommendations around physical distancing that are considered critical for suppressing any transmission of COVID-19 in Victoria at the current time.

The top lines at the present time are:

- Play your part and do the right thing or Victorians will die.
- Wash your hands.
- Cough into your elbow.
- Keep your distance from other people. Keep 1.5 metres between yourself and others
- Stay at home.
- If you can stay home, you must stay home.
- Stay in your own house and do not go to someone else's house.
- If you don't need to go out, don't go out.
- Do not go out if you are sick except to seek medical care.
- Shop for what you need, when you need it – do not go shopping unless you have to.
- If you can work from home, you should work from home.
- If you go to work, you must follow all the social distancing rules.
- Keep a distance of 1.5 metres is between yourself and others.
- Stop shaking hands, hugging or kissing as a greeting.

- Work from home where possible.
- If you have had close contact with a confirmed case of COVID-19 in the previous 14 days you must self-isolate and must not participate in community gatherings including community sport.
- Stay home if you are sick and don't expose others. If you are unwell with flu-like symptoms, do not go outside your property or home, do not go to work, school or shops unless it is essential – for example to seek medical care.
- Do not travel interstate, overseas or take a cruise. Avoid unnecessary travel.
- Everyone should avoid crowds if possible. If you must be in a crowd, keep the time short.

## Policy development and decision-making

### Evidence for physical distancing policies

Physical distancing between people aims to minimise interactions between people to limit the opportunities for disease to spread from an infected person to an un-infected person. Measures to bring about physical distancing amongst populations have been utilised in previous efforts to control influenza epidemics and pandemics.

Observational and modelling studies have provided evidence to help guide the use of physical distancing measures for influenza. Although these can provide some insight into how we might expect physical distancing to influence the progression of the COVID-19 pandemic, COVID-19 has its own disease characteristics which will influence the impact of physical distancing measures.

Evidence of the impact of social distancing is beginning to emerge from countries in which the epidemic commenced earlier than in Australia, particularly China. Additionally, modelling studies using information on the epidemiological features of COVID-19 are estimating the impact of different physical distancing measures.

To ensure that Victoria's approach to physical distancing is informed by the best-available evidence, an evidence summary will be produced and updated as new results emerge from the global scientific community. The current summary of evidence for physical distancing is at **Appendix 2**. This will be updated regularly.

### International and national comparisons

Reports outlining the physical distancing interventions in place in other Australian states and internationally will be developed and updated on an ongoing basis. These will be updated weekly in the first instance, however the current summary of comparisons for physical distancing is at **Appendix 6**.

### Evaluation of physical distancing policies

A range of measures to evaluate the efficacy of all interventions will be developed. In the first instance, these measures will include those suggested by the AHPPC:

- Evidence for efficacy of strengthened border measures/ travel advisories: reduction in the number of imported cases detected over time;
- Evidence of efficacy of the reduction in non-essential gatherings and mixing group sizes: reduction in the average number of secondary infections per case, based on contact tracing;
- Evidence for the combined efficacy of case finding and contact quarantine measures augmented by social distancing: reduction in the rate of growth of locally acquired infected cases;
- Evidence for the effectiveness of isolation: time from symptom onset to isolation.

The Intelligence function will develop a framework for monitoring and advising on progress with the effectiveness of physical distancing interventions in Victoria, to inform understanding of the Chief Health Officer and other colleagues, including decision-makers.

## Next steps for physical distancing interventions

Scenario modelling and factors determining scaling back of physical distancing will be considered and incorporated in this section of the Plan.

Initial draft considerations relating to scaling back physical distancing interventions have considered – but not determined – whether factors like those listed below might prompt consideration.

Factors might include situations where:

- Societal tolerance of physical distancing measures is breached, or
- a vaccine is available and is being implemented, or
- underlying immunity ('herd immunity') is above a certain level (which is more than 70%, or calculated as  $1/R_0$ , based on current reproductive number of around 2.4-2.7), or
- transmission will lead to manageable illness within an agreed intensive care unit capacity level, or
- transmission has been interrupted, mitigated, or stopped for a certain period.

## Compliance and enforcement for physical distancing

### Purpose of this section

The purpose of this compliance protocol is to set out the compliance approach in relation to Deputy Chief Health Officer (D/CHO) directions under *Public Health and Wellbeing Act 2008* (PHWA).

### Scope of compliance and enforcement

The scope of enforcement and compliance activity will include persons and situations listed below:

- People under quarantine for any reason, including travel or close contact;
- People under isolation for any reason, including suspected cases and confirmed cases;
- Mass gatherings and any matter relating to any Direction relating to physical distancing, including visitation restrictions.

### Chain of command for enforcement and compliance

It has been agreed with the Chief Health Officer and Deputy Chief Health Officer that the chain of command for matters relating to physical distancing (especially and including enforcement and compliance actions) interventions – in particular the compliance and enforcement activities relating to directions - is:

- Chief Health Officer to
- Public Health Commander to
- Deputy Public Health Commander (Planning) to
- Director Health and Human Services Regulation and Reform to
- Manager Environmental Health Regulation and Compliance to (where necessary -
- Victoria Police).

### Strategy for compliance and enforcement

#### Intended outcome of compliance and enforcement activity

The outcomes being sought are to reduce the transmission COVID-19 through a range of interventions, including: quarantine for 14 days of those returning from overseas, isolation of those suspected to have or confirmed to have COVID-19, application of restrictions on non-essential mass gatherings, restricted entry into aged care facilities where vulnerable populations reside and closure of non-essential business. Actions should focus on achieving outcomes, be risk-based and minimise transmission risks in the Victorian community.

#### Strategy for focus of compliance and enforcement activity

The focus of activity will be on:

- Implementation of a mandatory detention program for new arrivals from overseas;
- Spot checks by Victoria Police of people who should be in quarantine or isolation;
- Mass gathering compliance and enforcement by Victoria Police.

These priorities will change, and likely expand into specific and more targeted risk-based compliance for highest-risk individuals in quarantine or isolation.

The department will consider enhanced monitoring arrangements and consider indicating to Victoria Police that other methods are considered, such as tracking of individuals through mobile phones, or random sampling calls to mobile phones of individuals if agreed. These methods are not yet formally under consideration.

#### Approach to compliance and enforcement – prioritisation framework for compliance activities

This will be based on a risk framework, based on public health risk.

An initial frame for Victoria Police was provided on 25 March 2020 and was:

- Cases diagnosed after midnight tonight.
- Passengers who have disclosed country visited in one of the higher risk countries? Which ones?
- Random selection of age cohorts from passenger list (of those who arrived less than 14 days ago) so that we can start to gauge which cohorts are the most likely to not comply.
- Pubs/clubs etc. (should be fairly easy to gauge with overnight crews.)
- Any allegations received from DHHS or VicPol Police Assistance Line.
- Selection of commercial premises mentioned in latest direction.

The proposed new preliminary order for focus of compliance and enforcement based on a public health risk assessment is (highest priority is first) from 26 March 2020 and updated 1 April 2020:

- Returned travellers from overseas who are in mandatory quarantine;
- Returned travellers from overseas who have indicated they do not intend to adhere to quarantine (self-isolation);
- Mass gatherings that are underway where there is alleged non-compliance with Directions;
- Cruise ships where there is potential or alleged non-compliance with Directions;
- Non-essential businesses where there is potential or alleged non-compliance with Directions;
- Confirmed cases who indicate they do not intend to isolate or are suspected not to be isolating;
- Known close contacts who indicate they do not intend to isolate or are suspected not to be isolating;
- Individuals where there is a report that a person is not adherent to quarantine or isolation;
- All other confirmed cases in relation to isolation Direction;
- All other close contacts;
- Prohibited gatherings (other than mass gatherings) that are underway or alleged non-compliance with Directions;
- Non-essential activities that are alleged to be non-compliant with Directions.

The Director of health and Human Services Regulation and Reform will communicate these priorities as a control agency advice to Victoria Police on a daily basis or as updated.

### **Linking members of the public to compliance action by Victoria Police**

Linking occurs by:

- Callers may select the social distancing advice line between 8am and 8pm at DHHS by calling 1800 675 398 and selecting option 2.
- Callers may speak to Victoria Police by calling 1800 675 398 and selecting option 4.
- Callers who come through to any other line should be referred to the 1800 675 398 line and advised to select option 4.
- Members of the public are encouraged to call the phone line, rather than emailing their concerns.
- If concerns are emailed from the public about compliance with directions excluding those that are about close contacts and confirmed cases, the email should be forwarded to the Victoria Police complaints inbox, which is [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

### **Department of Health and Human Services Liaison to Victoria Police**

The department has established a roster of Emergency Management Liaison Officers at the State Control Centre, associated with the Police Operations Centre. The roster for the EMLO is on the board at the State Emergency Management Centre.

The EMLO is provided with the details of the DHHS oncall Authorised Officer each day to pass onto the Victoria Police SPOC for the overnight periods when the EMLO position is unstaffed.

## Department of Health and Human Services initiation of compliance activity

If concerns are emailed from the public about compliance by close contacts and confirmed cases, the Operations Officer should oversee an investigation by the case and contact management team. If the case and contact management team assess that compliance action is required, they should contact the DHHS EMLO on the roster to agree how Victoria Police can assist, and may need to email details to the COVID-19 Victoria Police DHHS email address, which is [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au)

## Peer influence, education and community awareness to guide approach

It is anticipated that there will be high levels of voluntary compliance by those impacted by the Directions. This is due to high levels of community awareness, strong community support for measures to prevent transmission of COVID-19.

## Exercising a Direction and considerations of enforcement

DHHS authorised officers are empowered to direct a person to comply with a D/CHO Direction (exercising the emergency powers). Victoria Police can assist an authorised officer to exercise a direction. Victoria Police are now undertaking a range of actions, including enforcement actions such as infringements.

Consideration of enforcement action, such as a prosecution under the PHWA, should generally only be pursued where there is a deliberate intention to not comply and/or repeated failure to comply with a direction.

## Victoria Police COVID 19 Taskforce Sentinel

A Victoria Police taskforce of 500 officers will promote and assess compliance with directions and perform spot-checks, such as visiting those who have recently returned from overseas. The taskforce is coordinated through the Police Operations Centre. Information for spot checks can be provided directly to through Victoria Police SPOC.

## Victoria Police support to DHHS compliance activity

Victoria Police (VicPol) will support DHHS to respond to allegations of non-compliance with the directions. This includes:

- receiving reports of non-compliance with directions through the Victoria Police Assistance Line (1800 675 398 – option 4);
- seeking to influence compliance and address non-compliance through spot checks, reiterating obligations, providing education and issuing infringements;
- where required, assisting DHHS authorised officers to provide a direction to a member/s of the public.

## Contacting the Victoria Police Special Operations Centre

Victoria Police Special Operations Centre private number is REDACTED if a senior officer in DHHS needs to contact the SPOC directly for an urgent reason.

The DHHS EMLO to Victoria Police is available through a roster in the SEMC.

## Infringements

On 28 March 2020, the Public Health and Wellbeing Regulations 2019 were amended to create four new infringement offences to strengthen enforcement specifically around the emergency and public health risk powers. These are:

- hinder or obstruct an authorised officer exercising a power without reasonable excuse (5 penalty units);
- refuse or fail to comply with a direction by CHO to provide information made under s.188(10) without a reasonable excuse (10 penalty units for natural person and 30 penalty units for body corporate);
- refuse or fail to comply with a direction given to, or a requirement made of, a person in the exercise of a public health risk powers (10 penalty units for natural person and 60 penalty units for body corporate);
- refuse or fail to comply with a direction, or a requirement made of, a person in the exercise of a powers under a authorisation (10 penalty units for natural person and 60 penalty units for body corporate).

## **Data management to support compliance and enforcement**

### **Department obtaining data on travellers for compliance**

Authorised officers are responsible for uploading information to the business system which will then inform an upload to PHESS so that all persons in mandatory detention are recorded in PHESS for compliance and monitoring and surveillance purposes. This upload will occur under the accountability of the Director of Health Regulation and Reform. Final arrangements being confirmed

### **Provision of data on agreed priority groups to Victoria Police for enforcement and compliance purposes**

On the direction of the Chief Health Officer, the Intelligence Officer has established a secure data portal for DHHS-Victoria Police data secure data sharing and provided a limited number of named Victoria Police officers in the COVID-19 response access. Information is being uploaded from Isolation Declaration Cards to a spreadsheet and then provided to the Intelligence Officer, who are then providing that information to Victoria Police for compliance purposes by a secure portal, on a daily basis. In conjunction with the priorities for compliance, Victoria Police can then take directed action. An information sharing agreement is under development.

Twice each day, the Intelligence Officer or delegate will upload the following to the data portal:

- Instructions on the use of the data;
- All active close contacts;
- All non-recovered confirmed cases;
- All new arrivals via scanned and uploaded Isolation Declaration Cards.

In coming days, data will be widened to include other groups if authorised by the Chief Health Officer. Further work is required to formally provide information on other categories for priority compliance activity

### **Specific procedures to support compliance and enforcement**

Personal protective equipment for authorised officers is provided through the PPE Taskforce and the Equipment and Consumables Sector of the response. This plan will specify source.

### **Digital platforms to aid contact tracing and enforcement and compliance**

The department will be implementing a new contact system to send daily health monitoring SMS messages to close contacts of confirmed COVID-19 cases and recently returned travellers who must isolate for fourteen days.

This system will use an Australian based system called Whispr to send messages to contacts in the department's public health monitoring systems.

People who receive these messages will be required to check in daily to:

- Confirm that they are in quarantine
- Whether they are well or experiencing COVID-19 symptoms
- Whether they have been tested and waiting for results.

Close contacts and returned travellers who are not isolating will be flagged by the system and can be further followed up as required.

This system became active from 26 March 2020.

Further work is underway to explore other systems for automating case and contact tracing.

### **Management of advice and exemption requests not relating to mandatory quarantine**

There is no exemption clause in the Restricted Activity Direction (formerly Essential Services Direction). There is an area where exemptions occur which is in clause 11 of the Hospital Visitor Direction.

Exemptions can only be considered when there is a provision within the Direction to allow an exemption to be considered.

The Directions and Detention order give rise, broadly, to three kinds of request for advice or consideration by individuals and the public –

- Permission to leave detention requests from people in detention in Victoria;
- Exceptional circumstances requests for people seeking to not be ordered into detention (who have not yet arrived in Victoria from overseas); and
- All other requests for advice in relation to Victoria's Directions (including exemption requests for certain parts of Directions).

Only this last category will be dealt with in this part of the Plan (all other requests for advice in relation to Victoria's Directions). The other two categories will be dealt with in the Mandatory Quarantine section of this Plan.

To be specific, requests in relation to the mandatory quarantine (detention) orders or permission to leave (for people in detention) should be rapidly reviewed by staff in the call centre function if they occur, and there should generally be a presumption that these requests are forwarded immediately (within two hours) to the [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) email address for review by an Authorised Officer working directly to the Compliance Lead, as these are a high priority category of requests. The Authorised Officer will then follow the process outlined in a subsequent section of this Plan.

### **Process for seeking advice or requesting exemptions in relation to the Hospital Visitor Direction or other Direction**

The Authorised Officer should provide advice to the requestor consistent with the *COVID -19 DHHS Physical Distancing Plan* and the Directions that are in force. The Plan is an internal document and is not for provision to members of the public. Instructions in the Directions should generally be emphasised.

Further information and consultation for an exemption relating to a direction can be undertaken by calling 1800 675 398.

The process is:

- Members of the public can submit requests to the COVID Directions inbox, including in relation to asking for advice on directions, requesting an exemption in relation to the Hospitals Visitor Direction (although that is unlikely) or in relation to asking to not have a detention order applied, or requesting a grant of leave (permission) from detention;
- Requests for advice (or Hospital Visitor exemptions) that are considered are logged on the secure MS Teams site established by Legal Services in a manner that can be audited and reviewed by any party in this compliance chain;
- The Director of Health Protection and Emergency Management who oversees the inbox and team managing this process assesses the merits of the individual proposal – including through delegates - and applies judgment as to whether advice should be provided verbally or whether advice is appropriate in writing to resolve the request, noting legal advice can be sought at any time;
- Requests are then assigned into three categories –
  - Priority 1 requests – where there is a same day urgency and importance is high;
  - Priority 2 requests – where there is complexity, lower urgency and / or medium urgency;
  - Priority 3 requests – where the authorised officer has determined that advice is given by the call centre function or staff with no further action, preferably verbally or in some rarer cases in writing;
- For priority 3 requests or where the call centre lead determines the matter is clear, if advice in writing is deemed appropriate, a written response should generally only be provided using an agreed template response, as it is preferable that advice is generally verbal in relation to directions (**Appendix 6**);
- For priority 2 requests and only where the call centre lead needs further advice, these should be batched and provided as a set of emails including a recommendation in each to an informal panel of the Deputy Public Health Commander, Compliance Lead and Legal Services to be convened every 24 hours if needed;

- For priority 1 requests, the call centre lead should email through details and a recommendation and call the Authorised Officer working directly to the Compliance Lead and discuss, and can initiate calls to the Compliance Lead at the time;
- If a request is deemed reasonable to meet, the Compliance Lead submits the proposal to the Deputy Public Health Commander Planning with a recommendation, and may call the Deputy PHC Planning to discuss and alert the DPHC to the request, including legal service advice as needed;
- The Deputy Public Health Commander assesses the recommendation and then recommends the outcome required by the Public Health Commander;
- The Public Health Commander communicates the outcome and the Compliance Lead is authorised to enact the outcome.
- Police will then be advised where any exemption is granted by the Public Health Commander via the [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) that have relevance for enforcement and compliance by Victoria Police.

The Authorised Officer should then notify the requestor in writing the outcome of the decision of the Public Health Commander.

Formal documentation placed into the TRIM folder by the Deputy Public Health Commander or a tasking officer.

An audit of requests to check responses will be undertaken in due course, including a review of how advice was communicated publicly, if at all.

## **Protocols for investigating and managing potential breaches of Directions**

Information is included here for reference, as Victoria Police have assumed a more independent role as to undertaking compliance and enforcement activity, with strategic direction as to highest risk groups.

### Action to achieve compliance and address non-compliance

Following advice that Victoria Police can enforce directions, from 30 March 2020 Victoria Police is the primary agency responsible for investigating allegations of non-compliance and undertaking enforcement action, including the issuing of infringement notices.

Prior to this advice, existing arrangements involved referring alleged breaches to Victoria Police for investigation. If needed, Victoria Police would request DHHS authorised officer action and assistance, such as for issuing a direction.

Victoria Police may contact the DHHS Emergency Management Liaison officer seeking advice or clarification of particular circumstances

## **Reporting and evaluation of compliance and enforcement**

The department proposes a range of checks or surveys of individuals who are directed to be in quarantine or isolation, including checks or surveys, and key metrics for evaluation. More detail will be developed in due course. Victoria Police provide a daily report on enforcement and compliance activity.

## Plan for people returning from overseas to Victoria

### Background to the mandatory quarantine (detention) intervention

A mandatory quarantine (detention) approach was introduced by creation of a policy that a detention order would be used for all people arriving from overseas into Victoria from midnight on Saturday 28 March 2020. An example detention order is available at <https://www.dhhs.vic.gov.au/state-emergency>

The objectives of the plan for people returning from overseas to Victoria are:

- To identify any instance of illness in returned travellers in order to detect any instance of infection;
- To ensure effective isolation of cases should illness occur in a returned traveller;
- To provide for the healthcare and welfare needs of returned travellers who are well or shown to be COVID-19 negative but are required to remain in quarantine for the required 14 days;
- To implement the direction of the Deputy Chief Health Officer through meeting:
  - A requirement to detain anyone arriving from overseas for a period of 14 days at a hotel in specific room for a specified period unless an individual determination is made that no detention is required;
  - A requirement to record provision of a detention notice showing that the order was served and to manage access to information on who is in detention using a secure database;
  - A requirement to undertake checks every 24 hours by an authorised officer during the period of detention;
  - A requirement to fairly and reasonably assess any request for permission to leave the hotel room / detention.

### Governance and oversight of the mandatory quarantine (detention) intervention

#### Lead roles

The Chief Health Officer and Deputy Chief Health Officer have instituted a policy, in keeping with a conclusion from National Cabinet, that leads to issuance of detention orders for people returned from overseas.

The following lead roles are involved in the oversight of the mandatory detention intervention:

- Deputy Chief Health Officer – decision to issue a detention notice or not;
- Deputy Public Health Commander Planning – initial advice to DCHO/PHC on requests where a decision is needed whether to grant leave (permission);
- Director Health Regulation and Reform – is the Compliance Lead, for compliance and enforcement activity including authorised officer workforce – including the issuing and modification of detention orders (for example including moving a person from one room to another);
- Deputy State Health Coordinator – lead for healthcare provision to persons in detention;
- Director Health Protection and Emergency Management – lead for welfare and implementation of healthcare provision to persons in detention;
- Department of Health and Human Services Commander – lead for logistics for provision of mandatory detention involving transport and accommodation.

#### Information management for people in mandatory detention

A business system is being developed by BTIM to assist with the management of the healthcare and welfare for people included in this intervention.

That system articulates with the PHESS database through a common link key.

Critical information about people in mandatory detention will be uploaded to PHESS at two points in the day as a download from the business system to be used.

To be determined: the master source of who has exited the airport in mandatory detention.

To be completed: the build of the business system to support welfare and health needs of people in mandatory detention.

The Enforcement and Compliance section will ensure identities and basic compliance information of all persons in detention are entered onto PHESS through the twice daily upload process from the completed business system.

As a parallel system, Isolation Declaration Card (IDCs) are collected at the airport and batched and sent to an Australia Post call centre. The data is entered into a spreadsheet and sent to DHHS for cross entry into PHESS. This process takes approximately 24 hours. This can then be reconciled with any passenger list or people in detention list.

## **Enforcement and Compliance Command for Mandatory Quarantine**

### **Deliverables of the enforcement and compliance function**

The Director of Health Regulation and Compliance role is responsible for:

- Overall public health control of the detention of people in mandatory quarantine;
- Oversight and control of authorised officers administering detention;
- Administration of decisions to detain and decision to grant leave from detention.

### **Authorised officer\* and Chief Health Officer obligations**

Sections 200(1)(a) and 200(2) – (8) of the PHWA set out several emergency powers including detaining any person or group of persons in the emergency area for the period reasonably necessary to eliminate or reduce a serious risk to health.

DHHS staff that are authorised to exercise powers under the PHWA may or may not also be authorised to exercise the public health risk powers and emergency powers given under s.199 of the PHWA by the CHO. This authorisation under s.199 has an applicable end date; relevant AOs must be aware of this date. CHO has not authorised council Environmental Health Officers to exercise emergency powers

Any AO that is unsure as to whether they been authorised under s.199 should contact administrative staff in the DHHS Health Protection Branch prior to enforcing compliance with the Direction and Detention Notice.

Exercising this power imposes several obligations on DHHS authorised officers including:

- producing their identity card for inspection prior to exercising a power under the PHWA
- before the person is subject to detention, explaining the reason why it is necessary to detain the person
- if it is not practicable to explain the reason why it is necessary to detain the person, doing so as soon as practicable
- before exercising any emergency powers, warning the person that refusal or failure to comply without reasonable excuse, is an offence
- facilitating any reasonable request for communication made by a person subject to detention
- reviewing, every 24 hours, whether continued detention of the person is reasonably necessary to eliminate or reduce a serious risk to health
- giving written notice to the Chief Health Officer (CHO) that a person:
  - has been made subject to detention
  - following a review, whether continued detention is reasonably necessary to eliminate or reduce the serious risk to public health.

The notice to the CHO must include:

- the name of the person being detained
- statement as to the reason why the person is being, or continues to be, subject to detention.

Following receipt of a notice, the CHO must inform the Minister as soon as reasonably practicable.

*\* DHHS Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order.*

## Required authorised officer actions at the airport

The lead for this situation is the Compliance Lead through a lead Authorised Officer.

DHHS Authorised Officers\*:

- declare they are an Authorised Officer and show AO card [s.166] **(mandatory AO obligation)**
- must provide a copy of the Direction and Detention Notice to each passenger (notification to parent/guardian may need to be conducted over the phone and interpretation services may be required) and:
  - explain the reasons for detention [s. 200(2)] **(mandatory AO obligation)**
  - warn the person that refusal or failure to comply with a reasonable excuse is an offence and that penalties may apply [s. 200(4)] **(mandatory AO obligation)**
- ensure the Direction and Detention Notice:
  - contains the hotel name at which the person will be detained
  - states the name/s of the person being detained
- record issue and receipt of the notice through a scanned photograph and enter into business system
- if necessary, facilitate a translator to explain the reasons for detention
- facilitate any reasonable request for communication, such as a phone call or email [s. 200(5)] **(mandatory AO obligation)**
- provide a fact sheet about detention (what the detainee can and can't do, who to contact for further information)
- record any actions taken in writing, including the above mandatory obligations, use of translator and any associated issues.
- use the list of arriving passengers to check off the provision of information to each arrival. This will help ensure all arrivals have been provided the information in the Direction and Detention Notice.
- check the vehicle transporting detainees is safe (in accordance with the review of transport arrangements procedure)

If it is not practicable to explain the reason for detention prior to subjecting the person to detention, the AO must do so as soon as practicable. This may be at the hotel, however every effort should be made to provide the reason at the airport [s. 200(3)] **(mandatory AO obligation)**.

\*DHHS Authorised Officer under the PHWA that has been authorised for the purposes of the emergency order.

## Authorised Officer review of transport arrangements

AO should consider the following:

- All persons must have been issued a direction and detention notice to board transport
- Is there adequate physical distance between driver and detainees?
- If not wait for another suitable vehicle to be arranged by the hotel.
- Has the vehicle been sanitised prior to anyone boarding? If not then vehicle must be cleaned in accordance with DHHS advice (business sector tab).
- Ensure the driver required to wear PPE?
- Are the persons subject to detention wearing face masks? (Refer to Airport and transit process)
- Are there pens/welfare check survey forms available for each detainee to complete enroute or at the hotel?

## People who are unwell at the airport

The lead for this situation is the Human Biosecurity Officer on behalf of the Deputy Chief Health Officer (Communicable Disease).

Any person who is unwell at the airport will be assessed by a DHHS staff member and biosecurity officer at the airport. After discussion with the human biosecurity officer, if it is determined that the person meets the criteria as a suspected case, the following actions should take place:

- The human biosecurity officer should organise an ambulance transfer to the Royal Melbourne Hospital or Royal Children's Hospital for testing and assessment;
- The authorised officer from DHHS at the airport should log the person as requiring mandatory quarantine at a specified hotel and then should follow-up with the hospital to update on whether the person has been found to be negative, so a transfer by (patient transfer/ambulance/ maxi taxi etc) can be organised to return to the hotel.
- If the person is unwell and requires admission, they should be admitted and the Compliance Lead informed;
- If the person is well enough to be discharged they should return to the hotel through an arrangement by the authorised officer, (comments as above) and be placed in a COVID-19 floor if positive, or in a general part of the hotel if tested negative for COVID-19.

### Requirement for review each day

- DHHS AO must – at least once every 24 hours – review whether the continued detention of the person is reasonably necessary to protect public health [s. 200(6)] (**mandatory AO obligation**).
- DHHS AO will undertake an electronic review of detainment arrangements by viewing a Business system. This includes reviewing:
  - the date and time of the previous review (to ensure it occurs at least once every 24 hours)
  - number of detainees present at the hotel
  - duration each detainee has been in detention for, to ensure that the 14-day detention period is adhered to
  - being cleared of COVID-19 results while in detention, which may be rationale for discontinuing detention
  - determining whether continued detention of each detainee is reasonably necessary to eliminate or reduce a serious risk to health
  - any other issues that have arisen.

To inform decision-making, a DHHS AO must:

- consider that the person is a returned overseas traveller who is subject to a notice and that they are obliged to comply with detainment
- consider that detainment is based on expert medical advice that overseas travellers are of an increased risk of COVID-19 and form most COVID-19 cases in Victoria
- note the date of entry in Australia and when the notice was given
- consider any other relevant compliance and welfare issues the AO<sup>1</sup> becomes aware of, such as:
  - person's health and wellbeing
  - any breaches of self-isolation requirement
  - issues raised during welfare checks (risk of self-harm, mental health issues)
  - actions taken to address issues
  - being cleared of COVID-19 results while in detention
  - any other material risks to the person
- record the outcomes of their review (high level notes) for each detained person (for each 24-hour period) in the agreed business system database. This spreadsheet allows ongoing assessment of each detainee and consideration of their entire detention history. This will be linked to and uploaded to PHESS.

To ascertain any medical, health or welfare issues, AO will need to liaise with on-site nurses and welfare staff (are there other people on-site an AO can liaise with to obtain this information).

### Additional roles of the AO

- AOs should check that security are doing some floor walks on the floors to ascertain longer-term needs and possible breaches
- AO going onto the floors with persons subject to detention must wear gloves and masks. There should be P2 masks for AO's at the hotels (in addition to the surgical masks).

- AO should provide a handover to the incoming AO to get an update of any problems or special arrangements. For example, some people are permitted to attend cancer therapy at Peter Mac etc.
- AO responsible for uploading information to the business system which will then inform an upload to PHESS so that all persons in mandatory detention are recorded in PHESS for compliance and monitoring and surveillance purposes.

### **Charter of Human Rights considerations in decision-making making process**

AO should consider the Charter of Humans Rights when exercising emergency powers and reviewing a person's detention every 24 hours, namely:

- **Right to life** – This includes a duty to take appropriate steps to protect the right to life and steps to ensure that the person in detention is in a safe environment and has access to services that protect their right to life
- **Right to protection from torture and cruel, inhuman or degrading treatment** – This includes protecting detainees from humiliation and not subjecting detainees to medical treatments without their consent
- **Right to freedom of movement** – While detention limits this right, it is done to minimise the serious risk to public health as a result of people travelling to Victoria from overseas
- **Right to privacy and reputation** – This includes protecting the personal information of detainees and storing it securely
- **Right to protection of families and children** – This includes taking steps to protect facility and children and providing supports services to parents, children and those with a disability
- **Property rights** – This includes ensuring a detainee's property is protected
- **Right to liberty and security of person** – this includes only be detained in accordance with the PHWA and ensuring steps are taken to ensure physical safety of people, such as threats from violence
- **Rights to humane treatment when deprived of liberty** - This includes treating detainees with humanity

### **Mandatory reporting (mandatory AO obligation)**

A DHHS AO must give written notice to the Chief Health Officer as soon as is reasonably practicable that:

- a person has been made subject to detention
- following a review, whether continued detention is reasonably necessary to eliminate or reduce the serious risk to public health.

The notice to the CHO must include:

- the name of the person being detained
- statement as to the reason why the person is being, or continues to be, subject to detention.

To streamline, the reporting process will involve a daily briefing to the CHO of new persons subject to detention and a database of persons subject to detention. The database will specify whether detention is being continued and the basis for this decision.

The CHO is required to advise the Minister for Health of any notice [s. 200(9)].

### **Grant of leave from the place of detention**

This is a different legal test to that which applies after the notice is issued. It relates solely to the granting of leave (permission) and requires a different process and set of considerations.

The detention notice provides for a 24-hour review (which is required by legislation) to assess whether ongoing detention is needed, and, in addition, a person may be permitted to leave their hotel room on certain grounds, including compassionate grounds.

Any arrangements for approved leave would need to meet public health (and human rights) requirements. It will be important that the authorised officer balances the needs of the person and public health risk. For example, if the person needs immediate medical care, public health risks need to be managed appropriately, but the expectation is that the leave would automatically be granted. This would be more nuanced and complex when the request is

made on compassionate grounds where there is a question about how public health risks might be managed. However, again, human rights need to be considered closely.

### **Potential mechanisms for grant of leave from detention**

Noting that there are broadly two mechanisms available to the authorised officer on behalf of the Compliance Lead / Public Health Commander to release a person from mandatory detention:

- The daily review by the authorised officer could find that detention is no longer required (with agreement of the Compliance Lead), or
- There could be permission given by the authorised officer (with agreement of the Compliance Lead) that a person has permission to leave the room in which they are detained.

The Public Health Commander could determine that detention should be served in an alternative location to a hotel, by writing a detention order to that effect.

### **Potential reasons for permission to grant leave from detention**

There is a policy direction from the Deputy Chief Health Officer that permission to leave mandatory detention should be exceptional and always based on an individual review of circumstances.

In the following circumstances there could be consideration of permission grant after an application to the Deputy Chief Health Officer however this will require permission:

- A person who has a medical treatment in a hospital;
- A person who has recovered from confirmed COVID-19 infection and is released from isolation;
- An unaccompanied minor (in some circumstances – see below);
- Instances where a person has a reasonably necessary requirement for physical or mental health or compassionate grounds to leave the room, as per the detention notice.

Note that the last category is highly subjective. This means it is the expectation of the authorising environment that exemption applications on those grounds are made on exceptional circumstances.

### **Process for considering requests for permission to leave or not have detention applied**

It is critical that any procedure allows for authorised officers to be nimble and able to respond to differing and dynamic circumstances impacting people who are detained, so that the detention does not become arbitrary. The process outlined here reflects their ability to make critical decisions impacting people in a timely manner.

Matters discussed with Legal Services on this matter should copy in **REDACTED** and Ed Byrden.

### **Considerations**

Any arrangements for approved leave would need to meet public health (and human rights) requirements. It will be important that the authorised officer balances the needs of the person and public health risk. For example, if the person needs immediate medical care, public health risks need to be managed appropriately, but the expectation is that the leave would automatically be granted. This would be more nuanced and complex when the request is made on compassionate grounds where there is a question about how public health risks might be managed. However, again, human rights need to be considered closely.

Requests in relation to the mandatory quarantine (detention) orders or permission to leave (for people in detention) should be rapidly reviewed by staff in the call centre function, and should always be funnelled through the COVID Directions inbox. That will allow that inbox to be a complete repository of all categories of requests for permission, exceptional circumstances requests and advice / exemption requests.

There should then be a presumption that these requests are forwarded immediately (within two hours) to [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) for review by an Authorised Officer working directly to the Director lead for compliance and enforcement, as these are a high priority category of request.

## Temporary leave from the place of detention (Detention notice)

There are four circumstances in which permission may be granted:

### 1. For the purpose of attending a medical facility to receive medical care

- D/CHO or Public Health Commander will consider circumstances determine if permission is granted. See *Policy on permissions and application of mandatory detention*. AO must be informed so they are aware.
- In particular circumstances, an on-site nurse may need to determine if medical care is required and how urgent that care may be. DHHS AO officers and on-site nurse may wish to discuss the person's medical needs with their manager, on-site nurse and the Director, Regulation and Compliance officer to assist in determining urgency and whether temporary leave is needed
- Where possible, on-site nurses should attempt to provide the needed medical supplies.

### 2. Where it is reasonably necessary for physical or mental health; or

See *policy on permissions and application of mandatory detention*

- D/CHO or Public Health Commander will consider circumstances to determine if permission is granted. See *Policy on permissions and application of mandatory detention*. AO must be informed so they are aware.
- If approval is granted:
  - the AO must be notified
  - persons subject to detention are not permitted to enter any other building that is not their (self-isolating) premises
  - persons subject to detention should always be accompanied by an on-site nurse, DHHS authorised officer, security staff or a Victoria Police officer, and social distancing principles should be adhered to
- a register of persons subject to detention should be utilised to determine which detainees are temporarily outside their premises at any one time.

### 3. On compassionate grounds;

- D/CHO or Public Health Commander will consider circumstances to determine if permission is granted. See *Policy on permissions and application of mandatory detention*
- The AO must be notified if a detainee has been granted permission to temporarily leave their room and under what circumstances.

### 4. Emergency situations must also be considered.

- DHHS authorised officers and Victoria Police officers may need to determine the severity of any emergency (such as a building fire, flood, natural disaster etc) and the health risk they pose to detainees
- if deemed that numerous detainees need to leave the premises due to an emergency, a common assembly point external to the premises should be utilised; detainees should be accompanied at all times by a DHHS authorised officer or a Victoria Police officer, and infection control and social distancing principles should be adhered to
- the accompanying DHHS authorised officer or a Victoria Police officer should ensure that all relevant detainees are present at the assembly point by way of a register of detainees.

The process for a person not yet in detention is:

- Members of the public who wish to ask for detention not to be applied, or permission to be granted to leave, have the option of submitting a request in writing to the COVID Directions inbox;
- Authorised officers should also use the COVID Directions inbox to submit requests for detention not to be applied or permission to be assessed so that the COVID Directions inbox is a complete funnel for handling these requests;

- All requests for permission that are considered are logged on the secure MS Teams site established by Legal Services in a manner that can be audited and reviewed by any party in this compliance chain;
- The Director of Health Protection and Emergency Management (lead for COVID-19 Directions) who oversees the inbox and team managing this process assesses the merits of the individual proposal – including through delegates - and applies judgment as to whether the application should proceed to the next step. There is a policy view – outlined in this Plan – that exceptional circumstances are generally required for the Authorised Officer to NOT issue a notice of detention for an overseas arrival;
- If a request is determined to require to proceed, it should then be sent to [COVID-19.vicpol@dhhs.vic.gov.au](mailto:COVID-19.vicpol@dhhs.vic.gov.au) for review by the AO reporting directly to the Direct E+C;
- The Compliance Lead will seek legal advice and a discussion with the Deputy Public Health Commander urgently if required;
- The outcome will be recorded in writing and communicated back to the COVID Directions team and requestor in writing.

### **Policy on unaccompanied minors**

Instances where an unaccompanied minor is captured by a detention order must be managed on a case by case basis.

In general, there is a presumption that there are no exemptions granted to mandatory quarantine. The issues in relation to mandatory quarantine of unaccompanied minors include: where this occurs, and with what adult supervision.

Preliminary legal advice is that the State could issue a detention order to a person under 18 years who is unaccompanied outside the home (a person in the care of the state) if certain conditions are met. These must include:

- AO has to check in regularly;
- Person can easily contact parent / guardian;
- Has adequate food;
- Remote education is facilitated.

A draft detention notice is being put together by Legal Services should this be required.

#### When an unaccompanied minor normally resides outside Victoria

It is proposed that where there is no clear alternative, an unaccompanied minor who normally resides outside of Victoria may be facilitated to undertake detention in their normal home state of residence, with appropriate risk management of any possible exposures to others on a domestic flight out of Victoria to that state. The department will need to be satisfied that the receiving state will take the person under 18 years and manage public health risks.

#### When an unaccompanied minor is normally resident in Victoria

It is proposed that an adult (who is not themselves a returned overseas traveller) who supervises a minor should join that minor at a place of detention. If that occurs, the adult should then remain with that person in quarantine although there is no legislative power to issue a direction to that adult to detain the adult.

If an unaccompanied minor who normally resides in Victoria is unable to be joined by a parent / guardian (for example because that parent / guardian has other caring duties and cannot thus join the minor in detention) then on a case by case basis, an assessment will be undertaken to identify whether detention is to be served in the home.

Whilst it may be acceptable for older children (16 – 18 year old) to be in quarantine without their parent(s) or guardian, it's likely to be unacceptable for younger children (12 or 13 years old or younger) and in that situation it's more appropriate to defer an alternative arrangement (i.e. parents join them in quarantine or quarantine at home).

If a child is quarantined at home with their parents, a detention notice should still be provided to the child and parents outlining the same requirements for children as if they were in quarantine in a hotel, together with the guidance about advice to close contacts in quarantine. Legal services will adapt notices for that purpose.

We'll need to ensure that authorised officers monitoring unaccompanied minors have current Working With Children Checks and understand their reporting requirements under the Reportable Conduct Scheme.

#### When a minor is detained at their home

If it is determined to be appropriate to detain a child at home after a risk assessment, the arrangement will involve:

- Issuing a detention order naming the specific home and / or parts of the home, and
- The detention order will be accompanied by advice on minimising risk of transmission to others in the home where the minor is detained (equivalent to advice to close contacts in quarantine); and
- An Authorised Officer will undertake a process to undertake a review each day in the manner required by the Act.

#### When an unaccompanied minor is detained in a hotel

If an unaccompanied minor is detained in a hotel without parents, a specific notice and process is below.

- A Detention Notice – Solo Children, is found at Appendix 7.
- A guideline for authorised officers in this respect is found at Appendix 8.

This is a more intensive process for the authorised officers, which is commensurate with the additional risk of quarantining a child because the child is subject to the care of the Chief Health Officer and department.

### **Working with Children Checks and Child Safe Standards**

DHHS will work with Department of Justice and Community Safety to facilitate Working With Children Checks for Authorised Officers.

#### **Escalation of issues**

Should an AO become aware of any concern about a child, the AO must:

- contact DHHS welfare teams immediately
- contact after hours child protection team and Victoria police if AO thinks a child may be harmed

#### **Release from mandatory quarantine (detention) after 14 days**

The fourteen-day period is calculated from the day following arrival of the person in Australia and ends at midnight fourteen days later/

DHHS Authorised Officer prior to release should:

- review the case file and ensure the 14 day detention has been met.
- liaise with on-site nurse to check the detainee meets the following – i.e. no symptoms of COVID-19 infection;
- any physical checks of the room (damage, missing items, left items etc).

#### **Supporting detainee to reach their preferred destination:**

- DHHS organise for the detainee to be transported to their destination by completing a cab charge, Uber or appropriate mode of transport.
- Release from isolation criteria are as per current DHHS Victoria guidelines (based on the SoNG).

DHHS AO to update the business systems database with details of release.

#### **Options to facilitate compliance**

DHHS authorised officers should make every effort to inform the person of their obligations, facilitate communication if requested and explain the important rationale for the direction. The following graduated approach should guide an DHHS authorised officer:

- explain the important reasons for detention, that is this action is necessary to reduce the serious risk to public health (**mandatory obligation**)

- provide the person subject to detention with a fact sheet and give opportunity to understand the necessary action
- provide the person subject to detention opportunity to communicate with another person, including any request for a third-party communicator (such as translator), family member or friend (**mandatory obligation**)
- seek assistance from other enforcement agencies, such as Victoria Police, to explain the reason for detention and mitigate occupational health and safety concerns
- discuss matter with on-site nurse to ascertain if there are any medical issues that may require consideration or deviation from the intended course of action
- issue a verbal direction to comply with the Direction and Detention Notice
- advise that penalties may apply if persons do not comply with the Direction and Detention Notice
- recommend that Victoria Police issue an infringement notice if there is repeated refusal or failure to comply with a direction
- recommend Victoria Police physically detain the non-compliant individual for transfer to another site.

DHHS Authorised Officers should make contemporaneous notes where a person is uncooperative or breaches the direction.

### **Transfer of uncooperative detainee to secure accommodation (refer to Authorised Officer review of transport arrangements procedure)**

It is recommended that a separate mode of transport is provided to uncooperative detainees to hotel or other for 14-day isolation.

Ensure appropriate safety measures are taken including child locks of doors and safety briefing for drivers etc.

### **Unauthorised departure from accommodation**

If there is reason to believe a person subject to detention is not complying with the direction and detention notice, the DHHS authorised officer should:

- notify on-site security and hotel management
- organise a search of the facility
- consider seeking police assistance
- notify the Director, Regulatory Reform if the person subject to detention is not found

If the person is located, DHHS authorised officer should:

- seek security or Victoria Police assistance if it is determined the person poses a risk of trying to leave
- provide an opportunity for the person to explain the reason why they left their room
- assess the nature and extent of the breach, for example:
  - a walk to obtain fresh air
  - a deliberate intention to leave the hotel
  - mental health issues
  - escaping emotional or physical violence
- assess possible breaches of infection control within the hotel and recommend cleaning
- consider issuing an official warning or infringement through Victoria Police
- reassess security arrangements
- report the matter to the Director, Regulation Reform.

DHHS Authorised Officers should make contemporaneous notes where a person is uncooperative or breaches a direction.

### **Occupational health and safety for Authorised Officers**

See **Appendix 9** for Occupational health and Safety measures.

## Logistics for Mandatory Quarantine

### Deliverables of the logistics function

The Director of the Office of the Secretary in DJPR role is responsible for:

- contract management with accommodation providers;
- transport arrangements from the airport;
- material needs including food and drink.

### Airport and transit process

The lead for this situation is the DHHS Authorised Officer.

Passengers pass through immigration, customs and enhanced health checks before being transferred to their hotel.

- Every passenger is temperature checked by a registered nurse (RN) contracted by DHHS.
- Every passenger is handed a copy of the direction and a detention notice by a DHHS Authorised Officer (AO) authorised under the emergency provisions of the *Public Health and Wellbeing Act 2008*.
- Every passenger is provided an information sheet by DHHS.
- Passengers are met by VicPol/Border Force and escorted to organised buses for transport to the hotel.
- Every passenger is given a single-use facemask to wear while in transit to their hotel room.
- Every passenger is given a welfare survey to fill out on the bus or at the hotel.

## Health and welfare for Mandatory Quarantine

### Deliverables of the health and welfare function

The Deputy State Health Coordinator role is responsible for:

- provision of healthcare to detainees;
- provision of welfare to detainees through the Director Health Protection and Emergency Management.

### Potential threats to health and wellbeing of people in mandatory detention

Potential risks associated with detention of returned travellers for compulsory 14-day quarantine can broadly be divided in physical or mental health risks.

| Physical risks   | Mental health risks         |
|--|-----------------------------|
| Transmission/development of COVID-19                                       | Family violence             |
| Transmission of other infectious diseases                                  | Depression                  |
| Other medical problems   | Anxiety                     |
| Diet – poor/imbalanced diet, food allergies/intolerances, over-consumption | Social isolation/loneliness |
| Lack of exercise   | Claustrophobia              |
| Lack of fresh air  | Drug and alcohol withdrawal |
| Smoking – nicotine withdrawal, risk of smoking within rooms/fire hazard    |                             |

### Tiers of risk for persons in mandatory detention

- Residents will be triaged into three tiers of risk. The type of welfare check will depend on the tier the passenger falls into.

- For phone calls (tier 1 and tier 2), translators must be available as needed. Language requirements should be recorded on arrival at the hotel and provisions made as required.
- Automated text messages are sent to all passengers in tier 3 via Whispir.
- Residents may be moved between risk tiers throughout their quarantine period as need dictates.

| Risk Tier | Risk factors   | Welfare check type               |
|-----------|--|----------------------------------|
| Tier 1    | Residents with suspected or confirmed COVID-19<br>Families with children < 18 years<br>Passengers aged > 65 years<br>Aboriginal and Torres Strait Islander peoples<br>Residents with underlying comorbidities (e.g. respiratory or cardiac conditions) | Daily phone call                 |
| Tier 2    | Those who indicate they require a phone call but do not have any other risk factors.<br>Residents who are by themselves.   | Phone call every second day      |
| Tier 3    | Low risk – everyone else.  | Daily text message (via Whispir) |

### Arrival at hotel – check in

At hotel check-in:

- Detainee provides Direction and Detention Notice to hotel staff; hotel staff to write on the notice:
  - room number
  - the date that the person will be detained until (14 days after arrival at place of detention).
- Detainee provides completed Direction and Detention Notice to AO to confirm that the following details on the notice are correct:
  - the hotel name;
  - hotel room number and arrival date, time and room on notice;
  - the date that the person will be detained until (14 days after arrival at place of detention).
- AO must take a photo of the person's Direction and Detention Notice and enters this into database.
- Following any medical and welfare check of the person, AO to liaise with nurses to identify detainees with medical or special needs.
- AO to note detainees with medical or special needs, such as prescription and medical appointments.

Persons will be sent to their allocated room and informed that a person will contact them in the afternoon or next AO to make themselves known to the security supervisor onsite.

### Welfare and health service provision

- Residents will have a welfare check (as specified below) each day.
- DHHS welfare officers conducting welfare checks phone and email [covid-19.vicpol@dhhs.vic.gov.au](mailto:covid-19.vicpol@dhhs.vic.gov.au) and AO individually to alert AO of medical and welfare issue.
- Residents will be provided with a resident satisfaction survey to complete each week.
- Residents can seek review by the nurse 24 hours a day if required.
- 24 hour on-call medical support will be available for on call subject to demand. This will initially be provided by a Field Emergency Medical Officer, and subsequently through a locum general practice service.
- Medical care is organised by Deputy State Health Coordinator. Deliverables include:

- Primary care assessments;
- Prescription provision;
- 24 hour access to a general practitioner;
- 24 hour access to nursing assessment.
- It is advisable that where possible, individuals who are in detention are linked to receive telehealth care from their normal general practice provider.

### **Conduct of a welfare check**

A welfare check will allow passengers to be assessed for medical and social issues, and concerns flagged and responded to. These issues include but are not limited to health, mental health, safety and family violence concerns. A welfare check will be conducted by a DHHS officer which is included as a script at **Appendix 5**.

### **Safety / mental health**

If there are concerns about the safety or mental health of passengers, the process is as follows:

- The nurse will review via phone (or in person if required with appropriate PPE).
- If escalation is required, the nurse will contact the Anxiety Recovery Centre Victoria for psychosocial support.
- Mental health triage at RMH/the Alfred can be contacted as a back-up.
- If the person is acutely unwell or at serious risk, urgent ambulance should be arranged by calling 000.
- Daily welfare check phone calls should be implemented thereafter if not already implemented.

### **Family violence (FV)**

If there are concerns about family violence / the safety of women and children, the process is as follows:

- Case worker is called to review via phone initially or in person if required (with appropriate PPE).
- A separate room may need to be organised to facilitate the review away from the other family members.
- If deemed necessary, separate rooms should be organised to separate the family members.
- Case worker to review again as required.

### **Alcohol and other drugs**

If there are concerns about alcohol or other substance abuse or withdrawal:

- Consider nurse/medical review.
- Provide numbers for support services (listed below).
- Preference for provision of standard drinks to a limit rather than prescribing diazepam for alcohol withdrawal.
- Prescriptions – Schedule 8 prescriptions for drug-dependent patients can only be provided after discussion with the DHHS Medicines and Poisons Branch.

### **Diet**

- Ensure a well-balanced diet with options provided for those with specific dietary requirements.
- Ensure access to essentials within the room (e.g. snacks, tea and coffee) to limit the amount of interactions/contact required with staff.
- Ensure access to additional food if required.

### **Exercise and fresh air**

- If the room has a balcony, ensure the residents can access it for fresh air.
- Advise residents to open windows/balconies where possible for fresh air and ventilation.
- If it is possible for residents to go outside to take some exercise for organised/supervised short periods of time, this should be facilitated where possible. Residents should ensure physical distancing is practised during this period. Only well residents from the same room should be able to go out to exercise at the same time.

- Residents should be provided with resources for exercise routines and yoga/mediation that they can perform safely within their rooms.

### **Procedure for a detainee / resident to leave their room for exercise or smoking**

A person must be compliant and must not have symptoms before they could be allowed to have supervised exercise or a smoking break.

The steps that must be taken by the detainee are:

- Confirm they are well;
- Confirm they have washed their hands immediately prior to leaving the room;
- Don a single-use facemask (surgical mask);
- Perform hand hygiene with alcohol-based handrub as they leave;
- Be reminded to – and then not touch any surfaces internal to the hotel on the way out;

The procedure for the security escort is:

- Don a mask;
- Undertake hand hygiene with an alcohol-based handrub or wash hands in soapy water;
- Be the person who touches all surfaces if required such as the lift button, handles;
- Maintain a distance (1.5 metres) from the person;

There is no requirement to wear gloves and this is not recommended, as many people forget to take them off and then contaminate surfaces. If gloves are worn, remove the gloves immediately after the person is back in their room and then wash your hands.

### **Social and communications**

- All residents should have access to **free** wifi/internet where at all possible.
- All residents should have access to entertainment such as television and streaming services (e.g. Netflix).
- All residents should have access to communications so that they can keep in regular contact with family and friends throughout the quarantine period.
- Toys and equipment should be provided for small children if possible.

### **Care packages for people in detention**

A public health risk assessment has been conducted that indicates that care packages, such as food or toys, can be delivered for provision to people in detention. The care package should be provided to the hotel reception or other party for conveyance to the person in detention and should not be directly handed to the person in quarantine by the person gifting the care package. Ensuring the package passes to the person in detention without misdirection or tampering is essential. There is no public health reason for an inspection of any care package.

### **Smoking policy for people in detention**

As part of the emergency response to COVID-19, individuals have been confined within hotels while under quarantine. The movement of these people has been restricted to hotel rooms, without access to outdoor spaces, where they can smoke.

#### Current laws

Under the *Tobacco Act 1987* (Tobacco Act), smoking is prohibited in an "enclosed workplace", however, Section 5A (2) (g), provides an exemption for the personal sleeping or living areas of a premises providing accommodation to members of the public for a fee. This means that, while a hotel is considered an enclosed workplace, the hotel could allow the occupants of the rooms to smoke if they choose.

In many cases, hotels have implemented their own smoke-free policies in rooms as the smoke is likely to enter the centralised air conditioning systems resulting in occupants of other rooms and staff being exposed to the smoke. Smoke also remains on the surfaces of the room and permeates soft furnishings meaning that it remains in the

room and exposes staff cleaning the room to the remaining residual smoke. The Department of Health and Human Services supports and encourages hotels to designate their rooms smoke-free.

If smokers were to be permitted to leave their rooms for supervised cigarette breaks, they would need to be taken to an area that does not constitute an enclosed workplace. This might be a balcony, roof top or other outdoor area. This area should preferably be away from open windows, doors and air conditioning intake points.

#### COVID-19 and smoking

The World Health Organization (WHO) has advised that any kind of tobacco smoking is harmful to the bodily systems, including the cardiovascular and respiratory systems, and puts smokers at greater risk in the context of COVID-19. Information from China, where COVID-19 originated, showed that people with cardiovascular and respiratory conditions, including those caused by smoking, were at higher risk of developing severe COVID-19 symptoms and death.

The Victorian Chief Health Officer has recommended that quitting smoking reduces the health risks associated with COVID-19.

#### Other examples of restricting access to smoking

There are some precedents of people being confined to facilities where they are unable to smoke. This includes mental health facilities, prisons and, if people are unable to leave, hospitals. In these circumstances, individuals are supported to manage cravings using pharmacotherapies such as nicotine replacement therapies.

#### Victoria's Charter of Human Rights and Responsibilities

Removing the ability to smoke would be compatible with the *Charter of Human Rights and Responsibilities Act 2006 (the Charter)*, as it would be for the purposes of protecting the right to life. Section 9 of the Charter states that "Every person has the right to life and to not have their life taken. The right to life includes a duty on government to take appropriate steps to protect the right to life."

#### Options

##### *Option 1: Provide support for smokers to quit or manage cravings (Recommended)*

The preferred option, for both the benefit of the individual and broader community would be to support smokers to quit or manage withdrawal while confined to their hotel room. This would mean that smokers be supported to manage cravings while they are unable to smoke but would not be forced to quit.

This could be easily managed through the provision of approved nicotine replacement therapies (NRT), with meal deliveries, accompanied by counselling through the Quitline. Quit Victoria has recommended a box of patches and an intermittent form of NRT such as a spray. These items are available for purchase without a prescription from a range of retailers including pharmacies and some big supermarkets.

Other pharmacotherapies, like zyban or champix, would require a prescription from a GP and are designed to help people completely quit as opposed to a short-term measure for people who are forced to stop smoking abruptly. These medications can take a while to take effect and, with champix, the advice is to continue smoking until it starts to impact on your cravings which means that it would not be an appropriate option for the circumstances.

Addiction to cigarettes includes both nicotine dependence and a behavioural and emotional dependence, which is why counselling plus pharmacotherapy is required. Someone who is heavily addicted will crave a cigarette every 45-60 minutes.

Telephone counselling is available via the Quitline - 13 78 48

Even if someone doesn't want to quit, Quitline can help them reduce the number of cigarettes they smoke.

People can also contact their regular general practitioner via telehealth.

##### *Option 2: Relax no smoking restrictions for the hotel rooms*

While it would be legally possible to enable people in quarantine to smoke in their rooms, this option is not recommended. This would have an adverse impact on hotels and their staff and goodwill in the circumstances. It

would also increase the health risks of individuals potentially already at risk of COVID-19. When sharing a room with children, smoking should not be allowed.

### *Option 3: Accompany individuals to leave the room to smoke*

While it would be possible to create a smoking area for people wishing to smoke, such as in an outdoor drinking area attached to a bar or restaurant facility, this option is not recommended. Allowing people to leave their hotel rooms to smoke undermines the quarantine restrictions being put in place. The individuals would need to be accompanied by security guards and might need to travel floors via lifts to access an outdoor area or leave the building.

Even if we assume, that the hotel is not currently operating for other customers, movement in the hotel creates an increased risk for staff and a need for greater vigilance in cleaning and maintaining distance.

### Current policy for smokers in mandatory quarantine

The following actions should occur –

- Nicotine Replacement Therapy should be promoted strongly for smokers;
- Smoking restrictions should remain in relation to the room;
- Only where absolutely necessary, and in exceptional circumstances, a person in mandatory quarantine could be granted permission to leave their room under specific circumstances, where public health risk is managed:
  - The Authorised Officer is aware and grants permission;
  - They are accompanied by security, who are provided PPE to wear;
  - They are instructed to – and follow the instruction – not to touch surfaces en-route to the smoking area and coming back;
  - They return immediately to their hotel room.

### **Other health and wellbeing issues**

- All residents should be given the contact information for support services such as Lifeline at the beginning of their quarantine period (the information sheet they are provided with at the airport should also have these contact numbers).
- Residents should have access to fresh bedlinen and towels as required.
- Care packages may be permitted for delivery to residents under certain circumstances and subject to checks by AOs.
- Residents can be provided with up to three standard drinks per day if there is a risk of alcohol withdrawal (this is in preference to prescribing benzodiazepines for withdrawal).
- Other residents can also request alcoholic drinks as part of their food and drink provisions.
- Smoking breaks or NRT should be offered to all smokers if feasible.

### **Actions to detect and test for COVID-19 amongst people in mandatory detention**

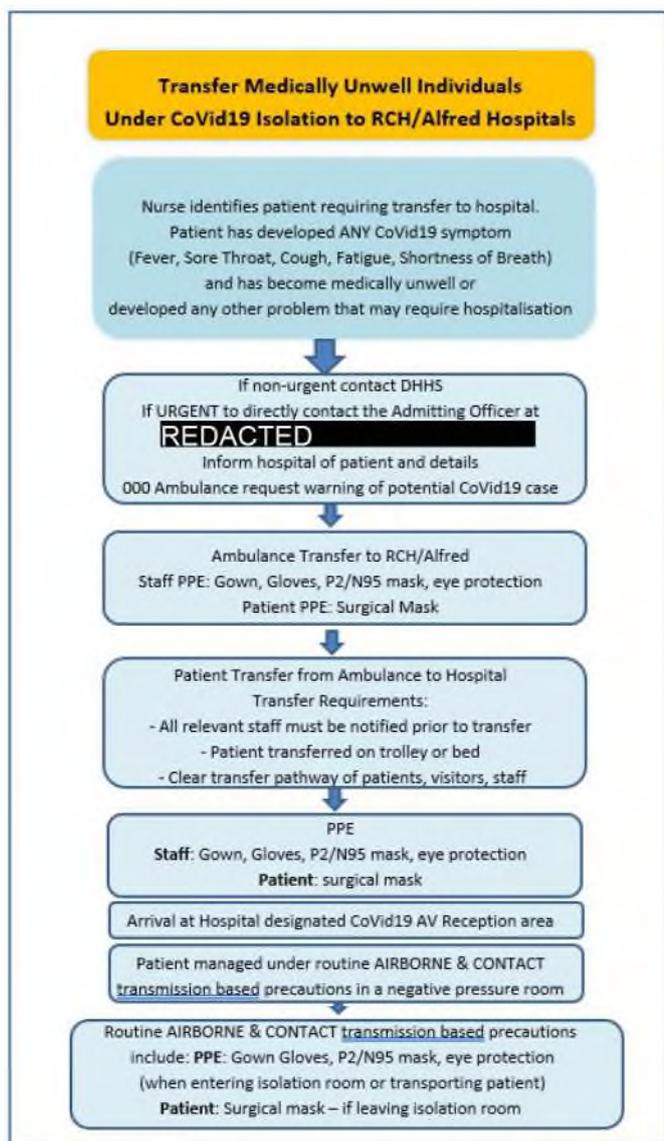

The following are the actions to enact this:

- Detainees will be asked daily (via phone or text) if they have symptoms consistent with COVID-19. These include but are not limited to fever, cough, shortness of breath and fatigue.
- The nurse onsite will be notified. The nurse will call the detainee (patient) and assess them over the phone. If face to face assessment is required, the nurse will assess them in the room with appropriate PPE.
- Security staff in PPE (masks and gloves) will accompany all nurses visiting hotel rooms. They will wait outside unless requested to enter by the nurses (full PPE is required to enter rooms).
- The nurse will assess the patient for symptoms of coronavirus. If deemed necessary, they will take swabs to test for COVID-19.
- If the patient is well enough, they can remain in quarantine at the hotel to await the test results. If they are sharing a room with another resident, they should be moved to a separate room if feasible and according to availability of rooms. If separation is not possible, they should practise physical distancing as far as is possible.

- If the test is positive and the patient is well, they can remain in quarantine at the hotel but should be moved to a separate section/floor of the hotel which is designated for confirmed cases. If they are sharing with other people, then arrangements such as a separate room or provision of PPE may be required, depending on the circumstances (for example it may not be feasible or appropriate to separate young children from parents).

### **Hospital transfer plan**

- Passengers requiring hospital assessment/treatment for suspected or confirmed COVID-19 or other conditions, should be transferred to either the Royal Melbourne Hospital (RMH) or The Alfred Hospital, depending on proximity (**note children should be transferred to the Royal Children's Hospital**).
- If the hospital transfer is non-urgent, contact DHHS.
- If the hospital transfer is urgent, contact the Admitting Officer at RCH/RMH/the Alfred.
- Inform the hospital of patient and details.
- Call 000 to request ambulance and inform them that the passenger is a suspected (or confirmed) case of COVID-19.
- Staff should don full PPE and the passenger must wear a single-use surgical mask if tolerated.
- All relevant staff including AO must be notified prior to the transfer.
- AO must view appropriate authorisation.
- The passenger should be transferred on a trolley or bed from ambulance into the designated COVID-19 ambulance reception area.
- The patient should be managed under routine airborne and contact transmission-based precautions in a negative pressure room if available. The patient should wear a single-use surgical mask if leaving the isolation room.
- Ambulance services will list the hotels as an area of concern in case of independent calls and will ask on site staff to assess need for attendance in the case of low acuity calls.
- All residents who are: in high risk groups, unwell, breathless or hypoxic (O2 sats <95%) should be considered for hospital transfer.

Note P2 respirators are not required, but appear in this chart as an indicative mask, pending modification of this chart to reflect recommendation that a single use facemask is required.

### Actions for confirmed cases of COVID-19 in people in mandatory detention

The following actions should be taken:

- Residents with confirmed COVID-19 should be accommodated / cohorted in a separate section/floor of the hotel, away from the non-COVID-19 infected passengers.

### Personal protective equipment (PPE)

Staff who engage with monitoring or assisting persons in mandatory detention in person:

- Apply standard infection prevention and control precautions at all times:
  - maintain 1.5 metre distance
  - wash your hands or use anti-bacterial agents frequently
  - avoid touching your face.
- Every situation requires a risk assessment that considers the context and client and actions required.

3. If you are not able to maintain a 1.5 metre distance and the person has symptoms (for example coughing) or is known to be a COVID-19 case use:
  - a. fluid-resistant surgical mask (replace when moist or wet)
  - b. eye protection
  - c. disposable gloves.
4. If you need to be in a confined space (<1.5 metre) with a known COVID-19 case for more than 15 minutes, wear a single use facemask, eye protection and gloves.

### **Cleaning of rooms**

Housekeeping services will not be provided routinely to residents. Fresh linen, towels and additional amenities can be left outside of rooms for residents to then collect. Biohazard bags can be left for residents to place dirty linen in and to leave outside their rooms for collection. Terminal cleaning is required on vacation of each room.

### **Reporting and evaluation on mandatory quarantine**

A report will be prepared to summarise the activity of the program, and provided to the Deputy Chief Health Officer on a regular basis in confidence.

## Communication and education

A communications plan for physical distancing is being developed to ensure the public receive timely, tailored and relevant advice on physical distancing measures.

The current collateral for the Victorian public and health sector to communicate on physical distancing requirements in Victoria includes items on the web and other locations:

### Stay at home and restrictions:

- Coronavirus website homepage tile and webpage with detailed information on restrictions:
- [www.dhhs.vic.gov.au/stay-home-and-restricted-activities-directions-frequently-asked-questions](http://www.dhhs.vic.gov.au/stay-home-and-restricted-activities-directions-frequently-asked-questions)

### Physical distancing and transmission reduction measures:

- Coronavirus website homepage tile and webpage with general information on physical distancing.
- [www.dhhs.vic.gov.au/coronavirus-covid-19-transmission-reduction-measures](http://www.dhhs.vic.gov.au/coronavirus-covid-19-transmission-reduction-measures)
- Uploadable Victorian physical distancing document in keeping with that tile's web content, located at TRIM HHSD/20/142098

### State of emergency and directions:

- Coronavirus website tile and webpage with PDFs of the signed Directions.
- [www.dhhs.vic.gov.au/state-emergency](http://www.dhhs.vic.gov.au/state-emergency)

### About coronavirus general information:

- Coronavirus website tile and webpage with general hygiene and physical distancing information.
- [www.dhhs.vic.gov.au/victorian-public-coronavirus-disease-covid-19](http://www.dhhs.vic.gov.au/victorian-public-coronavirus-disease-covid-19)

### Media (proactive and reactive):

- Daily interviews and press conferences by the Chief Health Officer, Premier, Minister for Health and Ambulance and the Public Health Commander
- Announcements will be made by the Premier/Minister/CHO at a media conference.
- A daily media release from the department will contain latest information on measures.

### Social media posts on physical distancing

- Daily posts on DHHS and VicEmergency social media accounts.
- Live streams of press conferences on Facebook
- Social media FAQs for responding to community via social media channels

### Videos on physical distancing

- Series of Chief Health Officer videos on self-isolation, quarantine and physical distancing

## Appendix 1 - Standard emails and letter advice for compliance and enforcement

The following templates are generic and educative in nature. DHHS officers should adapt the tone and content according to risk and individual circumstances.

### Airport arrivals

Dear (insert name),

As you may be aware, Victoria's Minister for Health has declared a state of emergency throughout Victoria in response to the coronavirus or COVID-19 situation. Following this declaration, Victoria's Deputy Chief Health Officer has exercised emergency powers under the *Public Health and Wellbeing Act 2008* to make a direction to eliminate or reduce the serious risk to public health posed by COVID-19.

We are contacting you as Department of Health and Human Services has received information that you may be not complying with the Airport Arrivals direction issued by Victoria's Deputy Chief Health Officer.

Please be aware that: a person who arrives between 5 pm on 18 March 2020 and midnight on 13 April 2020 at an airport in Victoria on a flight that originated from a place outside Australia, or on a connecting flight from a flight that originated from a place outside Australia:

- must travel from the airport to a premises that is suitable for you to reside in for 14 days; and/or
- except in exceptional circumstances, must reside in a suitable premises for the period beginning on the day of your arrival and ending at midnight on the fourteenth (14th) day after arrival);
- must not leave the premises except:
  - for the purposes of obtaining medical care or medical supplies
  - in any other emergency situation circumstances where it is possible to avoid close contact with other persons; and
- must not permit any other person to enter the premises unless that other person usually lives at the premises, or the other person is also complying with this direction for the same 14 day period, or for medical or emergency purposes also complying with the CHO direction, or for medical or emergency purposes).

This email/letter seeks to inform you of your obligations. A copy of the direction and a fact sheet is attached to this email/letter.

### Why it is important to comply with the Chief Health Officer's direction

The Victorian Government is very concerned about the serious, and potentially catastrophic, risk to public health arising from COVID-19 throughout Victoria.

Persons entering Victoria are at an increased risk of COVID-19. That is why a person entering Victoria from overseas must self-isolate for a period of 14 days in accordance with the Deputy Chief Health Officer's direction. Failure to self-isolate in accordance with the Deputy Chief Health Officer's direction may increase transmission of COVID 19 within our community.

All Victorians play an important role in minimising the impact of COVID-19. We strongly encourage you to comply with the CHO's direction and appreciate your co-cooperation.

### Mass gatherings

Dear (insert name)

As you may be aware, Victoria's Minister for Health has declared a state of emergency throughout Victoria in response to the coronavirus or COVID-19 situation. Following this declaration, Victoria's Deputy Chief Health Officer has exercised emergency powers under the *Public Health and Wellbeing Act 2008* to make a direction to eliminate or reduce the serious risk to public health posed by COVID-19.

We are contacting you as Department of Health and Human Services has received information that you may be not complying with the Mass Gatherings direction issued by Victoria's Deputy Chief Health Officer.

Please be aware that:

- A person who owns, controls or operates premises in Victoria must not allow a mass gathering to occur on premises
- A person must not organise a mass gathering on premises in Victoria.

A mass gathering means:

- A gathering of five hundred (500) or more persons in a single undivided outdoor space at the same time; or
- A gathering of one hundred (100) or more persons in a single undivided indoor space at the same time.

A number of exclusions exist such as at an airport and a hotel, motel or other accommodation facility that is necessary for the normal operation of accommodation services.

This email/letter seeks to inform you of your obligations. A copy of the direction and a fact sheet is attached to this letter/email.

### **Why it is important to comply with the Deputy Chief Health Officer's direction**

The Victorian Government is very concerned about the serious, and potentially catastrophic, risk to public health arising from COVID-19 throughout Victoria.

The restrictions are designed to limit transmission of COVID in places where there is high density of individuals in close proximity. This is because many individuals have been identified as being infected with COVID-19 and more cases are expected.

All Victorians play an important role in minimising the impact of COVID-19. We strongly encourage you to comply with the CHO's direction and appreciate your co-cooperation.

## Appendix 2 – Evidence on physical distancing interventions for reducing impact of COVID-19

Last updated 27 March 2020

This document provides a review of evidence regarding the effectiveness of physical distancing interventions on the COVID-19 epidemic. As evidence is rapidly emerging this document may not contain all relevant available information. It also contains some references to reports and pre-prints that have not undergone peer-review. Therefore, caution should be taken in interpretation. Furthermore, as new evidence emerges the picture of the effectiveness will change. This document will be updated to reflect the changing evidence base.

### Introduction

Physical distancing between people aims to minimise interactions between people to limit the opportunities for disease to spread from an infected person to an un-infected person. It is an example of a non-pharmaceutical intervention (NPI) that can be employed to control a disease outbreak. Measures to bring about physical distancing amongst populations have been utilised in previous efforts to control influenza epidemics and pandemics.

Observational and modelling studies have provided evidence to help guide the use of physical distancing measures for influenza. Although these can provide some insight into how we might expect physical distancing to influence the progression of the COVID-19 pandemic, COVID-19 has its own disease characteristics which will influence the impact of physical distancing measures. Evidence of the impact of social distancing is beginning to emerge from countries in which the epidemic commenced earlier than in Australia, particularly China. Additionally, modelling studies using information on the epidemiological features of COVID-19 are estimating the impact of different physical distancing measures.

This review consists of three parts:

- A review of the epidemiological features of COVID-19 and their implications for physical distancing in COVID-19
- A review of modelling analyses estimating the effects of physical distancing on the COVID-19 epidemic
- A review of evidence regarding physical distancing measures in the setting of pandemic influenza

## 1. Epidemiological features of COVID-19 that impact the effectiveness of physical distancing measures

### 1.1 Reproductive number

The basic reproductive number ( $R_0$ ) is the number of individuals a single infected individual will infect in an otherwise fully susceptible population. This value will be influenced by features inherent to the pathogen, and characteristics of the population, such as population density and the nature and frequency of human-human interactions. As such, there is no single true value of  $R_0$  for any disease, including COVID-19, as it will be influenced by population-specific factors.

Published estimates of  $R_0$  for COVID-19 have ranged between 2.1 and 3.58. (1–6)

### 1.2 Modes of transmission

Early evidence suggests that SARS-CoV-2 (the virus that causes COVID-19) is primarily transmitted via respiratory droplets transmitted during close contact, and via fomites. (7) However, there is evidence of viral shedding in faeces (8) and viral persistence in aerosols (9,10), suggesting that aerosol and faecal-oral transmission may also occur. Transmission may also be possible via ocular surfaces. (11)

### 1.3 Timing of transmission

Analyses of viral shedding suggest that the time of peak viral load is early in the course of illness, around the time that symptoms develop, and that viral load then reduces over time. (10) The median duration of detected viral shedding of 191 patients in Wuhan was 20.0 days (IQR: 17.0-24.0 days) in survivors. (12) Importantly, these measurements of viral load cannot distinguish infectious from non-infectious virus. Although the two types of virus

are often correlated early in influenza, we cannot say for sure for whether the same holds for COVID-19 at this stage.

Evidence from case and cluster reports (13–15), and several epidemiological analyses (16–19) suggest that COVID-19 can be transmitted prior to the onset of symptoms.

#### **1.4 Incubation period**

An analysis of 55,924 laboratory-confirmed cases, found the mean incubation period was estimated to be 5.5 days. (7) Another analysis of 181 confirmed cases outside of Hubei Province found the mean incubation period to be 5.1 days (95% CI: 4.5-5.8 days). (20)

#### **1.5 Duration of illness**

An analysis of the clinical course of 52 critically ill adult patients with SARS-CoV-2 pneumonia who were admitted to the intensive care unit (ICU) of a Chinese hospital in late December 2019 and January 2020, found the median time from symptom onset to death was calculated to be 18 days. (21)

#### **1.6 Demographic features of COVID-19**

In general, COVID-19 causes a much more severe illness in older people, with case-fatality rates increasing with age, particularly for those aged 80 years and older. (7,22)

Children have thus far accounted for few cases of COVID-19 and are unlikely to have severe illness. (23) However, the role of children in transmission of COVID-19 remains unclear. In a pre-print analysis of household contacts of cases, it was found that children were infected at the same rate as older household contacts. (24) In the report of the WHO-China joint mission it was noted that children accounted for 2.4% of cases, that infected children had largely been identified through contact tracing, and there was no recollection of episodes of transmission from child to adult. (7)

#### **1.7 Overview of the impact of key epidemiological features for physical distancing interventions**

Key points arising from these epidemiological features are:

- COVID-19 is highly transmissible, and although close contact is more likely to result in transmission, transmission may be possible from minor contact, or through contact with infectious surfaces
- The COVID-19 epidemic in many areas is following exponential growth patterns, so case counts can be expected to rise rapidly
- As evidence suggests that people can transmit COVID-19 prior to the onset of symptoms, and because infectiousness appears to be highest at the time of symptom onset, isolating cases at the point of symptom onset may be inadequate to prevent transmission
- As there is a delay between infection and symptom onset and a delay between symptom onset and case detection, there will be a delay (of roughly 10 days) between implementation of an intervention and seeing its impact on case counts
- As there is a delay between symptom onset and death, there will be an even longer delay to seeing the impact of interventions on death rates (up to two weeks)
- The role of children in COVID-19 transmission remains unclear and would have significant implications for the effect of school closures on the epidemic

## **2. Modelling studies evaluating potential impact of physical distancing interventions for COVID-19**

### **2.1 Modelling the impact of physical distancing interventions**

This will be updated.

### 2.1.1 Imperial College report on non-pharmaceutical interventions

Ferguson et al of Imperial College published a report estimating the impact of a range of non-pharmaceutical interventions (physical distancing interventions) on the COVID-19 epidemic in the UK and the US. (26) Effects of different combinations of population-level interventions were reviewed. The report describes two alternative strategies: suppression and mitigation. It describes suppression as aiming to reduce the R value to less than 1, resulting in transmission ceasing in the population. Mitigation, however, aims to reduce the impact of the epidemic, whilst infection builds up in the community, rather than causing transmission to cease. Actions towards mitigation would include preventing infection amongst those most vulnerable to severe disease and slowing the rate of infection.

The report suggests that an approach of mitigation would result in the critical care capacity being overwhelmed many times over, resulting in hundreds of thousands of deaths. Only a combination of very strong measures taken together (including case isolation, household quarantine, general social distancing, school and university closure) is predicted to avoid critical care capacity being overwhelmed.

The report suggested that if suppression is being pursued, then earlier implementation is better, but if mitigation is being pursued then it is better to implement interventions closer to the peak of the epidemic. School closures were estimated to have a greater role on a suppression strategy, rather than mitigation. The modelling also suggested that relaxing the intervention whilst the population remained susceptible would result in a later, large peak that would also overwhelm critical care capacity, suggesting that policies may need to remain until a vaccine was available.

The report concluded that suppression seemed the only viable option, given that mitigation would result in health care capacity being overwhelmed many times over. However, they noted the uncertainty in whether a suppression approach could be achieved, as well as the uncertainty in modelling estimates.

### 2.1.2 Early modelling analysis from Australia

A modelling analysis, published as a pre-print, conducted by Australian researchers, Chang et al (27) suggested that the best intervention strategy is a combination of restriction on international arrivals to Australia, case isolation, and social distancing with at least 80-90% compliance for a duration of 13 weeks. They noted that compliance levels below this would lengthen the duration of required suppression measures. They also note that resurgence of disease is possible once interventions cease, and their analysis does not attempt to quantify the impact of measures beyond the 28-week horizon of analysis.

Another Australian pre-print analysis by Di Lauro et al (28) reviewed the optimal timing for “one shot interventions”, interventions that are assumed to only be able to implemented once in the course of an epidemic and for a finite time period. This suggested that optimal timing depended on the aim of the intervention; that to minimise the total number infected the intervention should start close to the epidemic peak to avoid rebound once the intervention is stopped, while to minimise the peak prevalence, it should start earlier, allowing two peaks of comparable size rather than one very large peak.

### 2.1.3 Modelling the impact of physical distancing interventions in China

Using a stochastic transmission model and publicly available data, Kucharski et al (29), estimated the effect of the distancing interventions introduced in China on the 23rd of January. the median daily reproduction number ( $R_t$ ) in Wuhan declined from 2.35 (95% CI 1.15–4.77) 1 week before travel restrictions were introduced on Jan 23, 2020, to 1.05 (0.41–2.39) 1 week after.

An pre-print analysis by Lai et al (30) suggested that without the non-pharmaceutical intervention implemented in China (early detection and isolation of cases, travel restrictions and reduction of interpersonal interactions) the number of infections in Wuhan would have been many fold higher. They suggested that had the NPIs been conducted one week, two weeks, or three weeks earlier in China, cases could have been reduced by 66%, 86%, and 95%, respectively. They also suggested that social distancing interventions should be continued for the next few months to prevent case numbers increasing again after travel restrictions were lifted on February 17, 2020.

A pre-print analysis by Prem et al (31) reviewed the impact of China's interventions on social-mixing patterns and estimated the effects of different approaches to lifting the interventions. They suggested that control measures aimed at reducing social mixing can be effective in reducing the magnitude and delaying the epidemic peak. They suggested the interventions would have the most impact if continued until April, and if return to work was staggered. These results were sensitive to the duration of infectiousness and the infectiousness of children.

## **2.2 Modelling the potential impact of case isolation and contact tracing**

An analysis by Hellewell et al (32) considered the possibility of controlling a COVID-19 outbreak with contact tracing and case isolation alone. Under some parameter assumptions it was possible to control the outbreak without the need for physical distancing measures. However, the probability of controlling the outbreak in this way decreased with an  $R_0$  of 2.5 or 3.5, when there was a larger initial infectious population, a longer delay to case detection and a larger proportion of pre-symptomatic transmission. The study concludes that "in most plausible outbreak scenarios, case isolation and contact tracing alone is insufficient to control outbreaks, and that in some scenarios even near perfect contact tracing will still be insufficient, and further interventions would be required to achieve control."

A pre-print analysis by Kretzschmar et al (33), suggests it is unlikely that case isolation and contact tracing alone could control a COVID-19 outbreak. They note that if delay between onset of infectiousness and isolation is more than 4 to 6 days, or the proportion of asymptomatic cases is greater than 40% the outbreak cannot be controlled even with perfect tracing. However, they note that contact tracing efforts can still be a valuable tool in mitigating the epidemic impact.

## **2.3 Modelling the impact of school closures for COVID-19**

An early report from Di Domenico et al (34), used data from three French towns with COVID-19 outbreaks and assumed children had a susceptibility to COVID-19 of 20% relative to adults and relative infectiousness of 50%. With these assumptions they suggested that school closure alone would have limited benefit in reducing the peak incidence (less than 10% reduction with 8-week school closure for regions in the early phase of the epidemic). However, when coupled with 25% adults teleworking, 8-week school closure would be enough to delay the peak by almost 2 months with an approximately 40% reduction of the case incidence at the peak.

## **3. Evidence on physical distancing measures for pandemic influenza**

There are important differences between the COVID-19 pandemic and previous influenza pandemics. Three important differences are:

- It is well established that school children play a major role in spreading influenza virus because of higher person-to-person contact rates, higher susceptibility to infection, and greater infectiousness than adults. In contrast, children have accounted for fewer cases in the COVID-19 pandemic and their role in transmission is unclear.
- Pandemic influenza is thought to have a shorter incubation period (approximately 2 days) compared to COVID-19 (approximately 5 days).
- There is likely a greater proportion of severe and critical cases of COVID-19, than in pandemic influenza. (35)
- However, the evidence regarding physical distancing measures on influenza pandemics may still provide some insight into the role they may play in the response to COVID-19.

A recent review (prior to the COVID-19 outbreak) by Fong et al (36) surveyed the evidence for NPIs in pandemic influenza, in particular the effects of school closures, workplace measures and avoiding crowding.

### **3.1 School closures**

They found compelling evidence that school closure can reduce influenza transmission, especially among school aged children. However, the duration and optimal timing of closure were not clear because of heterogeneity of data, and transmission tended to increase when schools reopened.

A correlation analysis between weekly mortality rates and interventions (which included school closure) during the 1918–19 pandemic in cities in the United States estimated that early and sustained interventions reduced mortality rates by  $\leq 25\%$ . (37)

Two studies conducted in Hong Kong as a public health response to the 2009 influenza A(H1N1) pandemic estimated that school closures, followed by planned school holidays, reduced influenza transmission. (38,39)

Two studies conducted in Japan estimated that due to reactive school closures the peak number of cases and the cumulative number of cases in the 2009 pandemic were reduced by  $\approx 24\%$  (40) and 20% (41). However, two studies (one evaluating the response to the 2009 pandemic and the other seasonal influenza) estimated that reactive school closures had no effect in reducing the total attack rate and duration of school outbreaks, and the spread of influenza. (42,43)

It is important to note that school closures can have a disproportionate impact on vulnerable groups (eg low-income families), particularly when meals are provided by schools. This could be ameliorated by dismissing classes but allowing some children to attend schools for meals or enable parents to work. It has also been noted that school closures may have an impact on health workforce availability, as health care workers may have to care for children.

### 3.2 Workplace interventions

A systematic review of workplace measures by Ahmed et al (44) concluded that there was evidence, albeit weak, to indicate that such measures could slow transmission, reduce overall attack rates or peak attack rates, and delay the epidemic peak. In this review, epidemiological studies reviewed the effects of segregating persons into small subgroups and working from home. Modelling studies most frequently simulated the effects of workplace measures as reducing contacts by 50%.

In this review, for studies modelling  $R_0 \leq 1.9$ , workplace social distancing measures alone (single intervention) showed a median reduction of 23% in the cumulative influenza attack rate in the general population. Workplace social distancing measures combined with other nonpharmaceutical interventions showed a median reduction of 75% in the general population. However, the effectiveness was estimated to decline with higher  $R_0$  values, delayed triggering of workplace social distancing, or lower compliance.

Paid sick leave could improve compliance with a recommendation to stay away from work while ill. (45,46)

### 3.3 Avoiding crowding

The review by Fong et al (36) identified three studies that assessed the effects of measures to avoid crowding (such as bans on public gatherings, closure of theatres) in pandemic influenza. These suggested that such measures helped to reduce excess mortality in the 1918 pandemic and a natural study comparing the effect of accommodating pilgrims for World Youth Day in smaller groups rather than a large hall reduced transmission in 2008.

### Script

Good morning / afternoon, I'm XXX. Can I confirm who I'm speaking with?

|  |
|--|
|  |
|  |

I am working with the Department of Health and Human Services to support people in quarantine following their arrival in Australia, and I'm giving you a call to check on your welfare. We know that this may be a stressful time for you, and our aim is to make sure that you are as comfortable as you can be during this quarantine period.

I am a Victorian Public Servant and any information that you provide to me is subject to privacy legislation.

We will be checking in with you and the people you have been travelling with every 24 hours to make sure that you are ok and to find out if you have any health, safety or wellbeing concerns that we can address.

There are 23 questions in total, and it should take only a few minutes to go through these with you. When you answer, we would like to know about you as well as any other occupants in your room.

If you have needs that require additional support, we will connect you with another team who can provide this support.

### Introductory questions

- Are you still in Room XXX at the hotel? Circle YES / NO

|  |
|--|
|  |
|  |

- Are you a lone occupant in your hotel room? Yes/No if No:
  - Who are your fellow occupants, including your partner or spouse, children or fellow travellers?

| Name | Relationship | Age<br>(children/dependents) |
|------|--------------|------------------------------|
|      |              |                              |
|      |              |                              |
|      |              |                              |

3. Have you or your fellow occupants had to leave your room for any reason? If so, what was the reason? YES /NO

|  |
|--|
|  |
|  |
|  |
|  |

### Health questions

4. Have you had contact with a medical staff nurse whilst in quarantine? If yes, can you please provide details and is it being monitored?

|  |
|--|
|  |
|  |

5. Have you or your fellow occupants had any signs or symptoms of COVID-19, including fever, cough, shortness of breath, chills, body aches, sore throat, headache, runny nose, muscle pain or diarrhoea)?

|  |
|--|
|  |
|  |

6. Do you or anyone you are with have any medical conditions that require immediate support? (ie smokers requiring nicotine patches)

|  |
|--|
|  |
|  |

7. Do you, or anyone in your group (including children) have any immediate health or safety concerns?

|  |
|--|
|  |
|  |

8. Do you have any chronic health issues that require management?

|  |
|--|
|  |
|  |
|  |
|  |

9. Do you or anyone you are with have enough prescribed medication to last until the end of the quarantine period?

|  |
|--|
|  |
|  |

10. Are you keeping up regular handwashing?

|  |
|--|
|  |
|  |

11. What sort of things help you to live well every day? For example, do you exercise every day, do you eat at the same time every day?

|  |
|--|
|  |
|  |
|  |
|  |

### Safety questions

12. How is everything going with your family or the people you are sharing a room with?

|  |
|--|
|  |
|  |
|  |
|  |

13. Is there anything that is making you feel unsafe?

|  |
|--|
|  |
|  |
|  |
|  |

14. Are there any concerns that you anticipate in relation to your own or other occupant's safety that might become an issue in the coming days?

|  |
|--|
|  |
|  |
|  |
|  |

*If the person answers yes to either question 10 or the one above, you could say:*

- You have identified safety concerns -would you like me to establish a safe word if you require additional support regarding your safety?

If yes...

- The word I am providing is <xxx> (different word for each individual). You can use that word in a conversation with me and I will know that you need immediate support/distance from other occupants in the room or may be feeling a high level of distress.

*Where family violence, abuse or acute mental health is identified as an issue refer to specific guidance / escalate for specialist support.*

### Wellbeing questions

15. How are you and any children or other people that you are with coping at the moment?

|  |
|--|
|  |
|  |
|  |

16. Do you have any immediate concerns for any children / dependents who are with you?

|  |
|--|
|  |
|  |

17. Do you have any additional support needs that are not currently being met, including any access or mobility support requirements?

|  |
|--|
|  |
|  |

18. Have you been able to make and maintain contact with your family and friends?

|  |
|--|
|  |
|  |

19. What kind of things have you been doing to occupy yourself while you're in isolation, e.g. yoga, reading books, playing games, playing with toys?

|  |
|--|
|  |
|  |

20. Have you been able to plan for any care responsibilities that you have in Australia? Can these arrangements be maintained until the end of the quarantine period?

|  |
|--|
|  |
|  |

### Final

21. What has the hotel's responsiveness been like? Have you had any trouble getting food, having laundry done, room servicing etc.?

|  |
|--|
|  |
|  |

22. Do you have any other needs that we may be able to help you with?

|  |
|--|
|  |
|  |

23. Do you have any other concerns?

|  |
|--|
|  |
|--|

## **Appendix 6 – Scripts for physical distancing call centre**

Detail to be added about certain scenarios, including for funeral-related questions.

## Appendix 7 – Direction and detention notice – Solo Children

### DIRECTION AND DETENTION NOTICE

#### SOLO CHILDREN

*Public Health and Wellbeing Act 2008 (Vic)*

Section 200

#### 1. Reason for this Notice

- (2) You have arrived in Victoria from overseas, on or after midnight on 28 March 2020.
- (3) A state of emergency has been declared under section 198 of the *Public Health and Wellbeing Act 2008 (Vic)* (the **Act**), because of the serious risk to public health posed by COVID-19.
- (4) In particular, there is a serious risk to public health as a result of people travelling to Victoria from overseas. People who have been overseas are at the highest risk of infection and are one of the biggest contributors to the spread of COVID-19 throughout Victoria.
- (5) You will be detained at the hotel specified in clause 2 below, in the room specified in clause 2 below, for a period of 14 days, because that is reasonably necessary for the purpose of eliminating or reducing a serious risk to public health, in accordance with section 200(1)(a) of the Act.
- (6) Having regard to the medical advice, 14 days is the period reasonably required to ensure that you have not contracted COVID-19 as a result of your overseas travel.
- (7) You must comply with the directions below because they are reasonably necessary to protect public health, in accordance with section 200(1)(d) of the Act.
- (8) The Chief Health Officer will be notified that you have been detained. The Chief Health Officer must advise the Minister for Health of your detention.

*Note: These steps are required by sections 200(7) and (9) of the Act.*

#### 2. Place and time of detention

- (9) You will be detained at:

**Hotel:** \_\_\_\_\_ (to be completed at place of arrival)

**Room No:** \_\_\_\_\_ (to be completed on arrival at hotel)

- (10) You will be detained until: \_\_\_\_\_ on \_\_\_\_ of \_\_\_\_\_ 2020.

#### 3. Directions — transport to hotel

- (11) You must **proceed immediately to the vehicle** that has been provided to take you to the hotel, in accordance with any instructions given to you.
- (12) Once you arrive at the hotel, **you must proceed immediately to the room** you have been allocated above in accordance with any instructions given to you.

#### 4. Conditions of your detention

- (13) **You must not leave the room in any circumstances**, unless:

(c) you have been granted permission to do so:

(i) for the purposes of attending a medical facility to receive medical care; or

- (ii) where it is reasonably necessary for your physical or mental health; or
- (iii) on compassionate grounds; or
- (d) there is an emergency situation.

(14) **You must not permit any other person to enter your room**, unless the person is authorised to be there for a specific purpose (for example, providing food or for medical reasons).

(15) Except for authorised people, the only other people allowed in your room are people who are being detained in the same room as you.

(16) You are permitted to communicate with people who are not staying with you in your room, either by phone or other electronic means.

*Note: An authorised officer must facilitate any reasonable request for communication made by you, in accordance with section 200(5) of the Act.*

(17) If you are under 18 years of age your parent or guardian is permitted to stay with you, but only if they agree to submit to the same conditions of detention for the period that you are detained.

## 5. Review of your detention

Your detention will be reviewed at least once every 24 hours for the period that you are in detention, in order to determine whether your detention continues to be reasonably necessary to eliminate or reduce a serious risk to public health.

*Note: This review is required by section 200(6) of the Act.*

## 6. Special conditions because you are a solo child

Because your parent or guardian is not with you in detention the following additional protections apply to you:

- (a) We will check on your welfare throughout the day and overnight.
- (b) We will ensure you get adequate food, either from your parents or elsewhere.
- (c) We will make sure you can communicate with your parents regularly.
- (d) We will try to facilitate remote education where it is being provided by your school.
- (e) We will communicate with your parents once a day.

## 7. Offence and penalty

(19) It is an offence under section 203 of the Act if you refuse or fail to comply with the directions and requirements set out in this Notice, unless you have a reasonable excuse for refusing or failing to comply.

(20) The current penalty for an individual is \$19,826.40.

\_\_\_\_\_  
**Name of Authorised Officer:** \_\_\_\_\_

As authorised to exercise emergency powers by the Chief Health Officer under section 199(2)(a) of the Act.

## Appendix 8 – Guidelines for Authorised Officers (Unaccompanied Minors)

### Guidelines for Authorised Officers - Ensuring physical and mental welfare of international arrivals in individual detention (unaccompanied minors)

#### Introduction

You are an officer authorised by the Chief Health Officer under section 199(2)(a) of the *Public Health and Wellbeing Act 2008* (Vic) to exercise certain powers under that Act. You also have duties under the *Charter of Human Rights and Responsibilities Act 2006* (Vic) (**Charter**).

These Guidelines have been prepared to assist you to carry out your functions in relation to Victorian unaccompanied minors who have arrived in Victoria and are subject to detention notices, requiring them to self-quarantine in a designated hotel room for 14 days in order to limit the spread of Novel Coronavirus 2019 (**2019-nCoV**) where no parent, guardian or other carer (**parent**) has elected to join them in quarantine (a **Solo Child Detention Notice**).

As part of your functions, you will be required to make decisions as to whether a person who is subject to a Solo Child Detention Notice should be granted permission to leave their room:

- for the purposes of attending a medical facility to receive medical care; or
- where it is reasonably necessary for their physical or mental health; or
- on compassionate grounds.

Authorised Officers are also required to review the circumstances of each detained person at least once every 24 hours, in order to determine whether their detention continues to be reasonably necessary to eliminate or reduce a serious risk to public health.

#### Your obligations under the *Charter of Human Rights and Responsibilities Act 2006*

You are a public officer under the Charter. This means that, in providing services and performing functions in relation to persons subject to a Detention Notice you must, at all times:

- act compatibly with human rights; and
- give 'proper consideration' to the human rights of any person(s) affected by your decisions.

#### *How to give 'proper consideration' to human rights*

'Proper consideration' requires you to:

- **first**, understand in general terms which human rights will be affected by your decisions (these rights are set out below under 'relevant human rights');
- **second**, seriously turn your mind to the possible impact of your decisions on the relevant individual's human rights, and the implications for that person;
- **third**, identify the countervailing interests (e.g. the important public objectives such as preventing the further spread of 2019-nCoV, which may weigh against a person's full enjoyment of their human rights for a period of time); and
- **fourth**, balance the competing private and public interests to assess whether restricting a person's human rights (e.g. denying a person's request to leave their room) is justified in the circumstances.

### *Relevant human rights*

The following human rights protected by the Charter are likely to be relevant to your functions when conducting daily wellbeing visits and when assessing what is reasonably necessary for the physical and mental health of children who are subject to Solo Child Detention Notices:

- The right of **children** to such protection as is in their best interests (s 17(2)). As the Solo Child Detention Notices detain children in circumstances where no parent has elected to join them in quarantine, greater protection must be provided to these children in light of the vulnerability that this creates. Where possible the following additional protection should be provided:
  - You should undertake two hourly welfare checks while the child is awake and once overnight. You should ask the child to contact you when they wake each morning and let you know when they go to sleep so that this can be done.
  - You should ask the child if they have any concerns that they would like to raise with you at least once per day.
  - You should contact the child's parents once per day to identify whether the parent is having contact with the child and whether the parent or child have any concerns.
  - You should ensure that where the child does not already have the necessary equipment with them to do so (and their parent is not able to provide the necessary equipment) the child is provided with the use of equipment by the department to facilitate telephone and video calls with their parents. A child must not be detained without an adequate means of regularly communicating with their parents.
  - You should ensure that where the child does not already have the necessary equipment with them to do so (and their parent is not able to provide the necessary equipment) the child is provided with the use of equipment by the department to participate in remote education if that is occurring at the school they are attending. Within the confines of the quarantine you should obtain reasonable assistance for the child in setting up that computer equipment for use in remote education.
  - You should allow the child's parents to bring them lawful and safe items for recreation, study, amusement, sleep or exercise for their use during their detention. This should be allowed to occur at any time within business hours, and as many times as desired, during the detention.
- The rights to **liberty** (s 21) and **freedom of movement** (s 12), and the right to **humane treatment when deprived of liberty** (s 22). As the Solo Child Detention Notices deprive

children of liberty and restrict their movement, it is important that measures are put in place to ensure that the accommodation and conditions in which children are detained meet certain minimum standards (such as enabling parents to provide detained children with food, necessary medical care, and other necessities of living). It is also important that children are not detained for longer than is reasonably necessary.

- **Freedom of religion** (s 14) and **cultural rights** (s 19). Solo Child Detention Notices may temporarily affect the ability of people who are detained to exercise their religious or cultural rights or perform cultural duties; however, they do not prevent detained persons from holding a religious belief, nor do they restrict engaging in their cultural or religious practices in other ways (for example, through private prayer, online tools or engaging in religious or cultural practices with other persons with whom they are co-isolated). Requests by children for additional items or means to exercise their religious or cultural practices will need to be considered and accommodated if reasonably practicable in all the circumstances.
- The rights to **recognition and equality before the law**, and to **enjoy human rights without discrimination** (s 8). These rights will be relevant where the conditions of detention have a disproportionate impact on detained children who have a protected attribute (such as race or disability). Special measures may need to be taken in order to address the particular needs and vulnerabilities of, for example Aboriginal persons, or persons with a disability (including physical and mental conditions or disorders).
- The rights to **privacy, family and home** (s 13), **freedom of peaceful assembly** and **association** (s 16) and the **protection of families** (s 17). Solo Child Detention Notices are likely to temporarily restrict the rights of persons to develop and maintain social relations, to freely assemble and associate, and will prohibit physical family unification for those with family members in Victoria. Children's rights may be particularly affected, to the extent that a Solo Child Detention Notice results in the interference with a child's care and the broader family environment. It is important, therefore, to ensure children subject to Solo Child Detention Notices are not restricted from non-physical forms of communication with relatives and friends (such as by telephone or video call). Requests for additional items or services to facilitate such communication (e.g. internet access) will need to be considered and accommodated if reasonably practicable in all the circumstances.

Whether, following 'proper consideration', your decisions are compatible with each these human rights, will depend on whether they are reasonable and proportionate in all the circumstances (including whether you assessed any reasonably available alternatives).

### **General welfare considerations**

All persons who are deprived of liberty must be treated with humanity and respect, and decisions made in respect of their welfare must take account of their circumstances and the particular impact that being detained will have on them. Mandatory isolation may, for some people, cause greater hardship than for others – when performing welfare visits you will need to be alert to whether that is the case for any particular person.

In particular, anxieties over the outbreak of 2019-nCoV in conjunction with being isolated may result in the emergence or exacerbation of mental health conditions amongst persons who are subject to Detention Notices. If you have any concerns about the mental health of a detained person, you should immediately request an assessment of mental health be conducted and ensure appropriate support is facilitated. Hotel rooms are not normally used or designed for detention, so you should be aware that a

person who is detained in a hotel room could have greater opportunity to harm themselves than would be the case in a normal place of detention.

### **Additional welfare considerations for children**

Children differ from adults in their physical and psychological development, and in their emotional and educational needs. For these reasons, children who are subject to Solo Child Detention Notices may require different treatment or special measures.

In performing functions and making decisions with respect to a detained person who is a child, the best interests of the child should be a primary consideration. Children should be given the opportunity to conduct some form of physical exercise through daily indoor and outdoor recreational activities. They should also be provided with the ability to engage in age-appropriate activities tailored to their needs. Each child's needs must be assessed on a case-by-case basis. Requests for items or services to meet the needs of individual children will need to be considered and accommodated if reasonably practicable in all the circumstances. Where available, primary school age children should be allocated rooms that have an outside area where it is safe for active physical play to occur (not a balcony) and consideration should be given to allowing small children access to any larger outdoor areas that are available within the hotel, where possible within relevant transmission guidelines. Although each child's needs must be assessed daily and individually, it can be assumed that it will have a negative effect on a child's mental health to be kept in the same room or rooms for two weeks without access to an adequate outdoor area in which to play.

### **Balancing competing interests**

However, the best interests of children and the rights of anyone who is subject to a Solo Child Detention Notice will need to be balanced against other demonstrably justifiable ends; for example, lawful, reasonable and proportionate measures taken to reduce the further spread of 2019-nCoV. It is your role to undertake this balance in your welfare checks, based on the information and advice that you have from the department and on the information provided to you by the children that you are assessing.

## Appendix 9 – Authorised Officer Occupational Health and Safety

### Purpose

The purpose of this document is to provide an occupational health and safety procedure for authorised officers when attending off site locations during the current State of Emergency.

### Health Emergency

Coronaviruses are a large family of viruses that cause respiratory infections. These can range from the common cold to more serious diseases. COVID-19 is the disease caused by a new coronavirus. It was first reported in December 2019 in Wuhan City in China.

Symptoms of COVID-19 can range from mild illness to pneumonia. Some people will recover easily, and others may get very sick very quickly which in some cases can cause death.

### Compliance Activity

On 16 March 2020 a State of Emergency was declared in Victoria to combat COVID-19 and to provide the Chief Health Officer with the powers he needs to eliminate or reduce a serious risk to the public.

Under a State of Emergency, Authorised Officers, at the direction of the Chief Health Officer, can act to eliminate or reduce a serious risk to public health by detaining people, restricting movement, preventing entry to premises, or providing any other direction an officer considers reasonable to protect public health.

Using a roster-based system, you will be placed on call to exercise your authorised powers pursuant to section 199 of the *Public Health and Wellbeing Act 2008 (Act)*. **Your compliance role is only to exercise the powers under section 199 of the Act, any arrests, including moving people into detainment or physical contact with an offender suspect must be managed by Victoria Police.**

### OHS

Occupational Health and Safety is a shared responsibility of both the employer and the employee. Officers must raise hazards, concerns, incidents with: **REDACTED**

One of the foremost issues associated with site attendance is the 'uncontrolled environment' that exists. Officers can be exposed to infectious diseases (such as COVID-19), confrontational and/or aggressive members of the public who may be drug affected, mentally ill or intellectually impaired. The very nature of this work is likely to be perceived as invasive and can provoke a defensive response.

Risks can be minimised by maintaining routine safe work practices and proper planning. Prior to any site visit, risks and hazards should be identified and assessed.

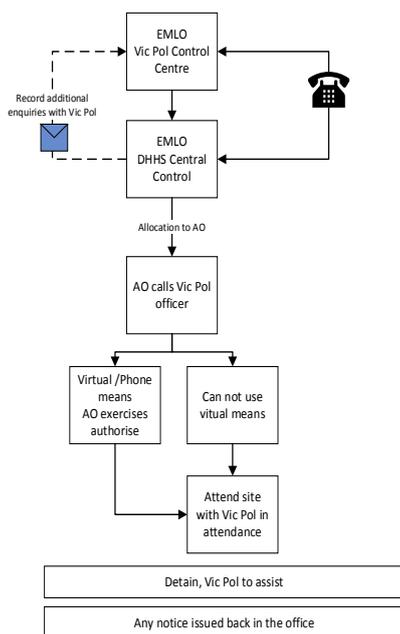

Officers and managers both have a shared responsibility for occupational health and safety. All employees have a responsibility to report and discuss hazards or perceived hazards, by bringing this to the managers attention.

#### Fatigue

Officers will be rostered on a rotating basis, with the aim of mitigating the risk of fatigue. Fatigue may impede decision making capability and when driving a motor vehicle to a location. When fatigue is identified please make this known to your manager.

To mitigate the risk of fatigue, officers should be aware of any fatigue they may have. A good tool to use to help officers identify their level of fatigue is to use the following calculator: <http://www.vgate.net.au/fatigue.php>

Officers are required to hold a valid motor vehicle license and are required to adhere to the requirements of the departments driving policy. Information about the departments policy can be found on the DHHS intranet site.

### Risk assessment before attendance | Personal Protection

Officers must only take a direction to attend a site with the approval of the Central DHHS emergency Management Liaison Officer or DHHS duty manager. An officer must only attend a location where there is the confirmed attendance of the Victoria Police.

In the first instance, officers are required to use technology (i.e: mobile phone, Facetime, Skype) to exercise their authority. This aims to protect officers from attending an uncontrolled environment, where the risk of harm is increased.

Before attending a site, the officer should make themselves familiar with the recommendations produced by the Australian Government and the Department of Health and Human Services, in the protection against COVID-19.

Interventions are known as ‘transmission reduction, or ‘physical distancing’ measures. Officers can take the following personal measure to reduce their risk of exposure to COVID-19. Officers with pre-existing medical conditions that put them more at risk of COVID-19, should discuss this with their medical practitioner and manager.

Personal measures to reduce risk the risk of exposure to COVID-19 include:

- Stay healthy with good nutrition, regular exercise, sensible drinking, sleeping well, and if you are a smoker, quitting.
- Wash your hands often with soap and water for at least 20 seconds, especially after you have been in a public place, or after blowing your nose, coughing, sneezing, or using the toilet. If soap and water are not readily available, use a hand sanitiser that contains at least 60 per cent alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Cover your nose and mouth with a tissue when you cough or sneeze. If you don’t have a tissue, cough or sneeze into your upper sleeve or elbow.
- Stop shaking hands, hugging or kissing as a greeting.
- Ensure a **distance of 1.5 metres** is kept between yourself and others.
- Get vaccinated for flu (influenza) as soon as available. This could help reduce the risk of further problems. *Note: the department covers expenses for vaccines, speak to your manager for more details.*
- Clean and disinfect high touch surfaces regularly, for example: telephones, keyboards, door handles, light switches and, bench tops.

When an officer is called to attend a site, they should take a **risk-based approach** and assess the most suitable way to reduce harm to themselves. Before attending, the officer must obtain information such as:

- Is the offender(s) a positive case of COVID-19?
- Has the offender(s) been recently in close contact with a positive case of COVID-19?
- Has the offender(s) recently returned from overseas within the last 14 days?

Officers are required to use their discretion and take into account their own personal safety. The Department of Health and Human Services has provided the following PPE:

- Face mask (N95 or equivalent)
- Gloves
- Hand Sanitizer

The following is only a guide for officers to consider.

| PPE                                      | Guide   |
|--|---|
| Face mask                                | When there is known case of COVID-19, or an offender has been recently been exposed to COVID-19 |
| Gloves                                   | Always  |
| Hand Sanitizer / Soap                    | Always  |
| Social Distancing of at least 1.5 meters | Always  |

## Known risks and hazards

| Hazard                 | Risk                                 | Mitigate  |
|------------------------|--------------------------------------|---|
| COVID-19 infection     | Serious illness / death              | Follow personal protective measures   |
| Fatigue                | Impaired decisions / driving to site | In the first instance use virtual technology to perform duties<br><br>Use fatigue calculator<br><a href="http://www.vgate.net.au/fatigue.php">http://www.vgate.net.au/fatigue.php</a> |
| Physical Injury        | Low / Medium                         | Only attend a site with Victoria Police   |
| Other infectious agent |                                      | Follow personal protective measures   |

## PROTECTED: FOR COMMENT: Public Health Command and RHPem resourcing project - scan and next steps

 Attachments: DRAFT - Environmental scan.pptx (2.39 MB); FINAL - Pub Health & RHPem Resourcing Project scope May 20.pptx (1.33 MB)

**KD – Tent booked for Wed 27 May - 9.30am**

Dear Meena, Brett, Annaliese, Angie, Andrea and Pam

Thank you to you and your teams for contributing to the initial environmental scan for the Public Health, Enforcement and Compliance and Emergency Operations Command functions over the last week or so.

### Project Scope

As you know this is the first product for a resourcing project that Melissa Skilbeck and Jacinda de Witts have agreed to be joint sponsors for. As set out in the attached project scope endorsed by the sponsors, the project will develop the design for the continuation of a dedicated COVID-19 public health response, including emergency accommodation and quarantine, alongside the re-establishment of business as usual RHPem functions.

### Feedback on draft environmental scan

The first stage of the project is the delivery of the environmental scan that seeks to understand structures in place across Public Health Command, Enforcement and Compliance and Emergency Operations, identify critical roles within these structures and provide some preliminary analysis on workforce supply and demand pressures.

The first draft of the scan is attached **for your review and comment by 9am Monday, 25 May – is it accurate and complete**. Please feel free to test your sections with relevant leaders in your teams but I'd ask you not to share widely, as this is still a draft.

### Reference group

Under the project scope, you or your nominee are invited to join a reference group to provide endorsement for products to be presented to the project sponsors, discuss key issues and recommend any solutions. For example, the initial scan identifies that there are corporate support functions across the structures that have been stood up and asks the question whether some of these should be managed more consistently (eg using same rostering system).

Mindful of your precious time, the project sponsors support a *virtual reference group* based largely out of session work with you with targeted meetings only as needed by the project team to progress the work. We are testing sending you a product at end of day Thurs for feedback by Monday. If this works, we would use a similar rhythm for future papers.

That said, given that part of the project is to get everyone on the same page about what we expect will involve competing priorities and challenges, I propose to hold a kick off meeting of the reference group. We are aiming for early next week depending on schedules. The focus is

proposed to be: any general questions you have on the project scope; key interdependencies you want the project team to be aware of; and your feedback on the proposed key issues and next steps on slide 11. We will send you an agenda ahead of the meeting.

You will see that the proposed next steps require continued work with you and Corporate Services partners. We have met with Marg and Gordon in particular and agreed to coordinate how we support the next steps with your logistics leads. Be assured, as set out in the project scope there are urgent sourcing and funding bid next steps already happening in parallel. I am also checking with Euan regarding a Health Coordinator representative/input regarding clinical workforce matters.

I will ask my office to speak to yours to see what might work best for a meeting time. Assuming not all of you will be able to attend a particular time, you are welcome to consider a suitable executive nominee/rostered alternate.

Feel free to call me or **REDACTED**, who is Project Director for this work if you have any questions in the meantime.

Cheers

**Nick Chiam**

# Contents

## Section 1

Introduction, summary covering:

1. Scope
2. Key themes identified through environmental scan
3. Workforce overview, supply and demand and critical roles
4. Priority, sequencing and next steps

## Section 2, 3 and 4

For each of the three functions in scope, the following format is followed:

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and resourcing issues to resolve
6. Capability considerations

# Section 1

## Introduction

1. Scope
2. Key themes identified through environmental scan
3. Workforce overview, supply and demand and critical roles
4. Priority, sequencing and next steps

# Environmental scan: Scope and summary text

## *Overview and purpose of this pack*

- In April 2020, the Australian National Cabinet indicated intention to pursue necessary public health action to minimise the impact of COVID-19. The Victorian Department of Health and Human Services is the lead for this COVID-19 health emergency response.
- An environmental scan has explored the structural and workforce arrangements in place across three of the department's core emergency response functions, namely, Public Health Command, Operations Soteria and Enforcement and Compliance. It the underpinning analysis for a *public health resourcing plan* sponsored by the Dep Secs, RHPem and Public Health Emergency Coordination and Operations.
- This report is broken up into specific sections for each of these core functions, including current 'as is' structures, design considerations and threshold sustainability issues to work through. The introductory section collates these issues into themes and proposes an establishment of a reference group to work through these matters.

## *Project scope*

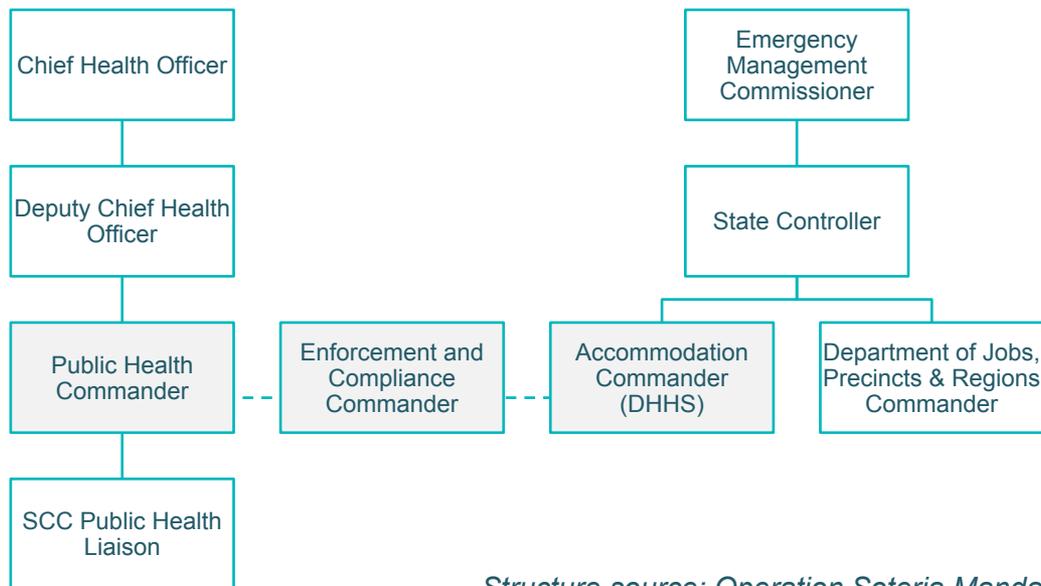

1. To design for the continuation of a dedicated COVID-19 public health response, including emergency accommodation and quarantine, alongside the reestablishment of business as usual RHPem functions.
2. To identify critical roles and key staff who need to return to business as usual roles (within or outside DHHS) and work with corporate partners to ensure workforce planning (i.e. plan for supply and address immediate workforce gaps).

In planning how to transition to a "COVID-19 normal world", consideration must be given to the existing Clause 10 proposal and relevant funding submissions put to CCC in May 2020.

# Operation Soteria high level governance structure

Three specific functions from within this governance structure are covered in this *environmental scan*, including:

1. Enforcement and Compliance
2. Emergency Operations
3. Public health command

Structure source: Operation Soteria Mandatory Quarantine for all Victorian Arrivals Plan

# Key findings by theme

|                              |   |
|------------------------------|---|
| Design / structures          | Structural design is evolving across all three structures, making it difficult for corporate and logistics to support business needs, including an inability to formalise roles and structures, report, monitor, and source workforce.  |
| Operational policy           | Policy and operational demands are evolving, presenting challenge for operational policy development, consistency and implementation. Planning will need to consider operational resourcing, particularly for “second wave scenario”.   |
| Governance                   | Some structures, operating models, reporting lines and some functional relationships/accountabilities amongst senior leads are unclear; and matrix arrangements in operational areas may be better managed through clear hierarchy  |
| Business support duplication | Several functions across the three structures are providing program support that could be consolidated or at the least, managed consistently using the same systems and processes (e.g. rostering, logistics, public channels).   |
| BAU impact                   | BAU functions that have temporarily deployed expertise to the COVID-19 response (e.g. RHPEM) are increasingly under pressure, including some corporate / communications functions that have been embedded in new structures.  |
| Workforce                    | An overarching workforce / pipeline plan is required to address supply and demand pressures that are emerging in BAU and external pipelines due to continued demand for similar capability across different functions, capabilities that do not exist en masse in the VPS, executive oversight and up to 24/7 rosters that require significant volume of staff. |
| Corporate sequencing         | There is important corporate sequencing to work through to support the response, including industrial matters (i.e. standing up new teams and alignment with the existing RHPEM clause 10 proposal), budget positions (the availability and/or success of budget submission).   |

**PROTECTED**

# Workforce

## Overview

- In the absence of formal reporting (e.g. many staff "report" to the BAU manager), and the high volume of agency hire and deliberate policies that encourage rotation and flexible sourcing, workforce numbers should be viewed as indicative and subject to fluctuation.
- The scan found that as at 15 May approximately 1000 staff are rotating through various teams and structures across emergency accommodation, enforcement and compliance and public health. The high volume of rostered positions and teams contributes to this number – the actual number of *positions* is considerably fewer (but not yet confirmed).
- Indicatively, almost 60% of all functions are staffed from within DHHS or the Victorian Government, with the remaining 40% coming in from external, namely, local government and various agency hire spanning health services.
- Overall, RHPEM accounts for almost 30% of workforce across these functions, with over 200 staff formally deployed to the response.
- In April, these functions were estimated to need to grow to 1,400+ FTE to sustain the emergency response in 20-21. It is expected that this analysis should provide a basis for the Commanders leading these functions to validate their growth needs.

| Function                              | Staff       |
|---------------------------------------|-------------|
| <b>Public Health Command</b>          | <b>494</b>  |
| Public Health Emerg. Op. Coordination | 70          |
| Case, Contact and Outbreak            | 188         |
| Intelligence                          | 134         |
| Pathology                             | 13          |
| Physical Distancing                   | 5           |
| Public Health Coordination            | 65          |
| Public Information                    | 19          |
| <b>Enforcement and Compliance</b>     | <b>175</b>  |
| Leadership and oversight              | 2           |
| Operations                            | 135         |
| Policy and exemption                  | 38          |
| <b>Emergency accommodation</b>        | <b>400</b>  |
| Leadership and oversight              | 10          |
| Welfare Cell                          | 90          |
| Airport, Hotels and Clinical          | 300         |
| <b>Total</b>                          | <b>1070</b> |

*All numbers are indicative and require further triangulation with corporate and programs.*

# Workforce

## Supply and demand challenges

- Until now, of the ~1000 staff rotating through roles, ~40% have been sourced within DHHS and its portfolio agencies, mainly RHPEM.
- A significant proportion – 42% – have been sourced externally, including health service and general agency hire, other VPS agencies and local councils.
- The high supply of external appointments, particularly those from local councils and other VPS agencies, is anticipated by a number of functional leads to shrink as restrictions begin to ease. External staff most at risk include, but are not limited to, **AOs and exemption case managers** from Enforcement and Compliance Command and **case contact and tracing officers** from Public Health Command.
- The uncertain nature of the public health event and dynamic policy and social settings and requirements will mean that these functions will not be able to managed in a "stable state" during the remainder of the COVID-19 response. A dedicated organisational design and workforce supply function may be required to support these functions may need to continue.

| Function                       | Staff |
|--------------------------------|-------|
| DHHS                           | 41%   |
| Children and Families          | 0%    |
| Corporate                      | 3%    |
| CSOD                           | 5%    |
| Health and Wellbeing           | 1%    |
| Housing and Infrastructure     | 0.2%  |
| RHPEM                          | 30%   |
| Strategy and Planning          | 1%    |
| Administrative Offices         | 1%    |
| External                       | 42%   |
| Casual Staff                   | 0%    |
| External (Councils and VicGov) | 14%   |
| External agency                | 28%   |
| VicGov                         | 17%   |
| Various (VicGov Mobility)      | 17%   |

*All numbers are indicative and require further triangulation with corporate and programs.*

# Workforce

## Critical roles

All roles are important in the COVID-19 response. This slide lists *critical* roles identified by functional leads as 'roles in the structure they cannot do without, or easily replace' if the employee became unwell, run down or unavailable. These critical roles can be categorised as 1) leadership (i.e. executives or managers overseeing key functions) and 2) technical (i.e. technical roles where capability is limited or not readily available. Several roles already have people appointed to them, but require rostering/twinning support.

*Note: All structures in this report outline critical roles in red and high level role descriptions are in the appendices.*

### 1. Enforcement and compliance

*Commander; Deputy Commander AO Operations; Senior Authorised Officers; Manager Policy and Protocols; Exemption Case Managers*

### 2. Emergency Operations

*Deputy Commander; Deputy Commander Hotels; Deputy Commander Ports of Entry; Deputy Commander Welfare; Clinical Governance Lead; Welfare Operations Manager; CART practitioners; Hotel Site Lead*

### 3. Public Health Command

*Chief Health officer; Deputy Chief Health Officer; Deputy Commander Strategy & Planning; Deputy Commander Intelligence; Manager Intelligence Operations; Manager Surveillance & Response; Manager Strategy, Systems & Reporting Intelligence; Deputy Commander, Pathology and Infection Prevention and Control; Manager, Pathology Operations; Manager, Infection Prevention and Control Operations; Deputy Commander Case, Contact and Outbreak Management; Operations Lead, CCOM; Strategy and Policy Lead, CCOM; Team Leader Triage and Notification; Deputy Public Health Commander Physical Distance; SMA CD, Deputy Commander, Public Information; Public Information Officer; Deputy Public Information Officer; Director, Outbreak; Executive Lead, COVID Directions; Lead, Risk and Escalations, COVID Directions*

# Ongoing impact on BAU

## Health protection branch

Based in RHPEM, the role of the Health Protection Branch is to protect and manage public health risk through regulating, monitoring, ensuring compliance, incident response and health promotion and education (e.g. communicable diseases, environmental health hazards (other than pollution and waste) and food and drinking water safety).

Usually, the branch consists of ~150 staff, although, the establishment of public health incident management and regulatory functions to respond to COVID-19 means the Communicable Diseases and Environmental components have been diverted and considerably depleted. A paper submitted to Board in May 2020 outlines the risk to RHPEM responses more broadly and this slide highlights specific issues for Health Protection.

As we enter a 'new normal', a strategic decision will need to be made on how best to mitigate these risks, including considerations for reintegration of the COVID-19 response into BAU health protection.

### BAU risk impact

Regulatory prevention activities estimated to be 50% less (e.g. inspections for radiology, cooling towers, other communicable diseases, educate and inform); reduced/slower auditing responses (e.g. food / water safety); routine follow ups (e.g. congenital syphilis investigations).

### BAU workforce impact

OHS issues relating to fatigue, stress and uncertainty as staff perform different roles to manage BAU activity; reduced innovation; inability to manage new and existing performance management or misconduct

### Legislative

Complexity emerging with dual Chief Health Officer legislative responsibilities (i.e. not all powers can be delegated to deputy or acting (e.g. use of emergency powers); financial and people delegations

### Governance

Core branch executive split across different priorities; some reporting arrangements are complex under current shadow function arrangements

# Key issues to be addressed and next steps

## Key issues to be addressed based on this scan

- The *"as is" structures* in this scan should provide the basis to validate costings for sustaining these functions and for corporate services to work through corporate issues e.g. reporting lines. At this stage, all numbers in this pack should be treated as indicative and subject to further review.
- The *design considerations* indicate several teams where new or changed roles and responsibilities or reporting lines are needed.
- The *workforce analysis* shows where RHPEM staff are located and combined with critical role analysis should support strategies to mitigate risk in the return to BAU.
- The *workforce analysis* highlights functions that are vulnerable to external workforce departures, including AOs and case and contact tracing that require alternate sourcing strategies.
- The *critical roles* identified indicate immediate recruitment priorities (some of which are underway).

|   | Next steps and actions   | Lead                                      |
|---|--|---|
| 1 | Validate 20-21 resource costings.  | RHPEM<br>Coord / PH<br>Op Coord / Finance |
| 2 | Agree with Corporate Services how to progress key elements of this work, including a coordinated approach to IR, role and structural design, workforce reporting and project management. | OT / P&C /<br>Customer Support            |
| 3 | Agree and implement design changes, including Pub Health Command expansion.  | OT / P&C /<br>Customer Support            |
| 4 | Critical role recruitment in May and June.   | P&C / OT                                  |
| 5 | Alternate sourcing strategies.   | OT / P&C                                  |
| 6 | MCC submission to secure VPS supply  | RHPEM Coord                               |
| 7 | CCC submission to secure funding.  | RHPEM Coord                               |
| 8 | Develop, implement BAU restoration plan for RHPEM,   | OT / P&C /<br>Customer Support            |

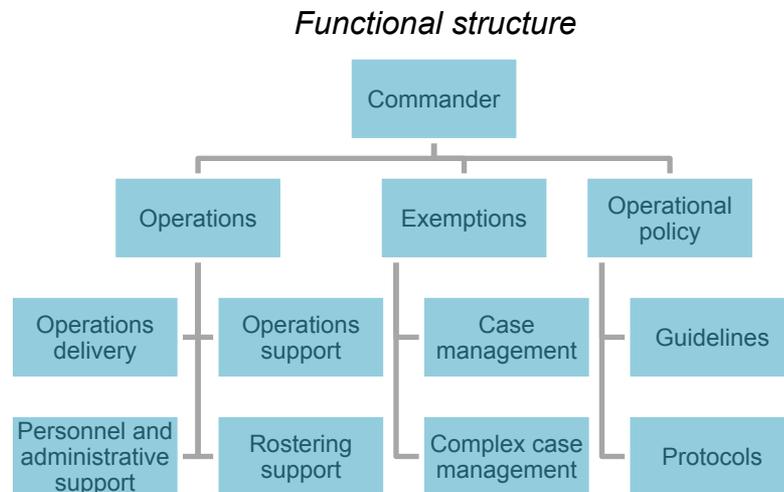

## Section 2

### Enforcement and Compliance

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and resourcing issues to resolve
6. Capability considerations

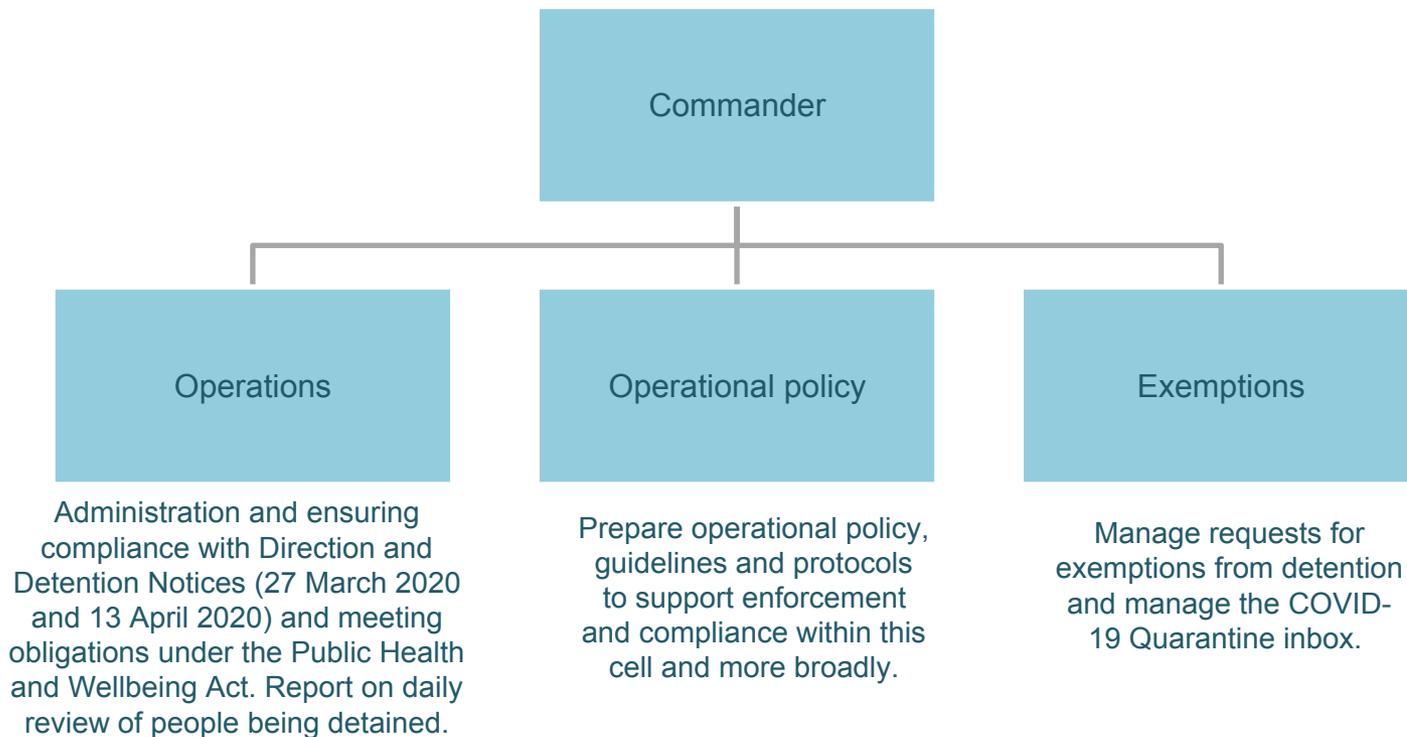

# Enforcement and Compliance: Background

- As of 16 April 2020, National Cabinet has indicated an intention to pursue necessary public health action to minimise the impact of COVID 19
- The policy is given effect through a direction and detention notice under the *Public Health and Wellbeing Act 2008*. The directions are displayed on the department's website and were made by the Deputy Chief Health Officer or Chief Health Officer.
- Beyond community wide directions, a mandatory quarantine (detention) approach was introduced by the Victorian Government, consistent with the Commonwealth Government through a policy that a detention order would be used for all people arriving from overseas into Victoria.
- A Compliance and Enforcement Command has been stood up to provide advice and input into complex compliance matters and to execute enforcement and compliance on behalf of Chief Health Officer and their delegate.

# Enforcement and Compliance

## High level functional structure

# Enforcement and Compliance

## Operating model components

- Skype is the predominant communication software being used to accommodate external stakeholders.
- The Compliance and Welfare Management System (CWMS) has three components – AOs use *Compliance Form*, Nurses use *Nurse Health Record* and Welfare staff use Welfare Management System. Smart form for exemptions rolled out W/C 20/5 to allow direct applications to CWMS and reduce email traffic.
- Policy and Protocols team do not have access to the software.
- Microsoft Teams is used and there are several channels.

### Technology

- Emails allow several external channels used for requests for exemptions (e.g. people who will be detained, the MO, other departments, DFAT, consulates, shipping companies etc.)
- DJPR provides data and information to AOs about detainees and those in quarantine through daily Situational Reports.
- While the CWMS provides data on detainees, there are issues with this (e.g. timeliness) and a team is being set up to address this.

### Channels

- Pre arrival: request to be exempt from quarantine
- Airport: quarantine exemptions; issue detention notice cards and capture a picture of card in CWMS, and update CWMS; escort persons in quarantine to transport
- Hotel: Update detention notice card with room details; update CWMS
- During Quarantine: manage process flows and update CWMS for matters relating to requests for early exits; daily compliance checks; welfare checks; room, hotel or hospital transfers and transportation; hotel exits; security escalation; request to be exempt from quarantine.

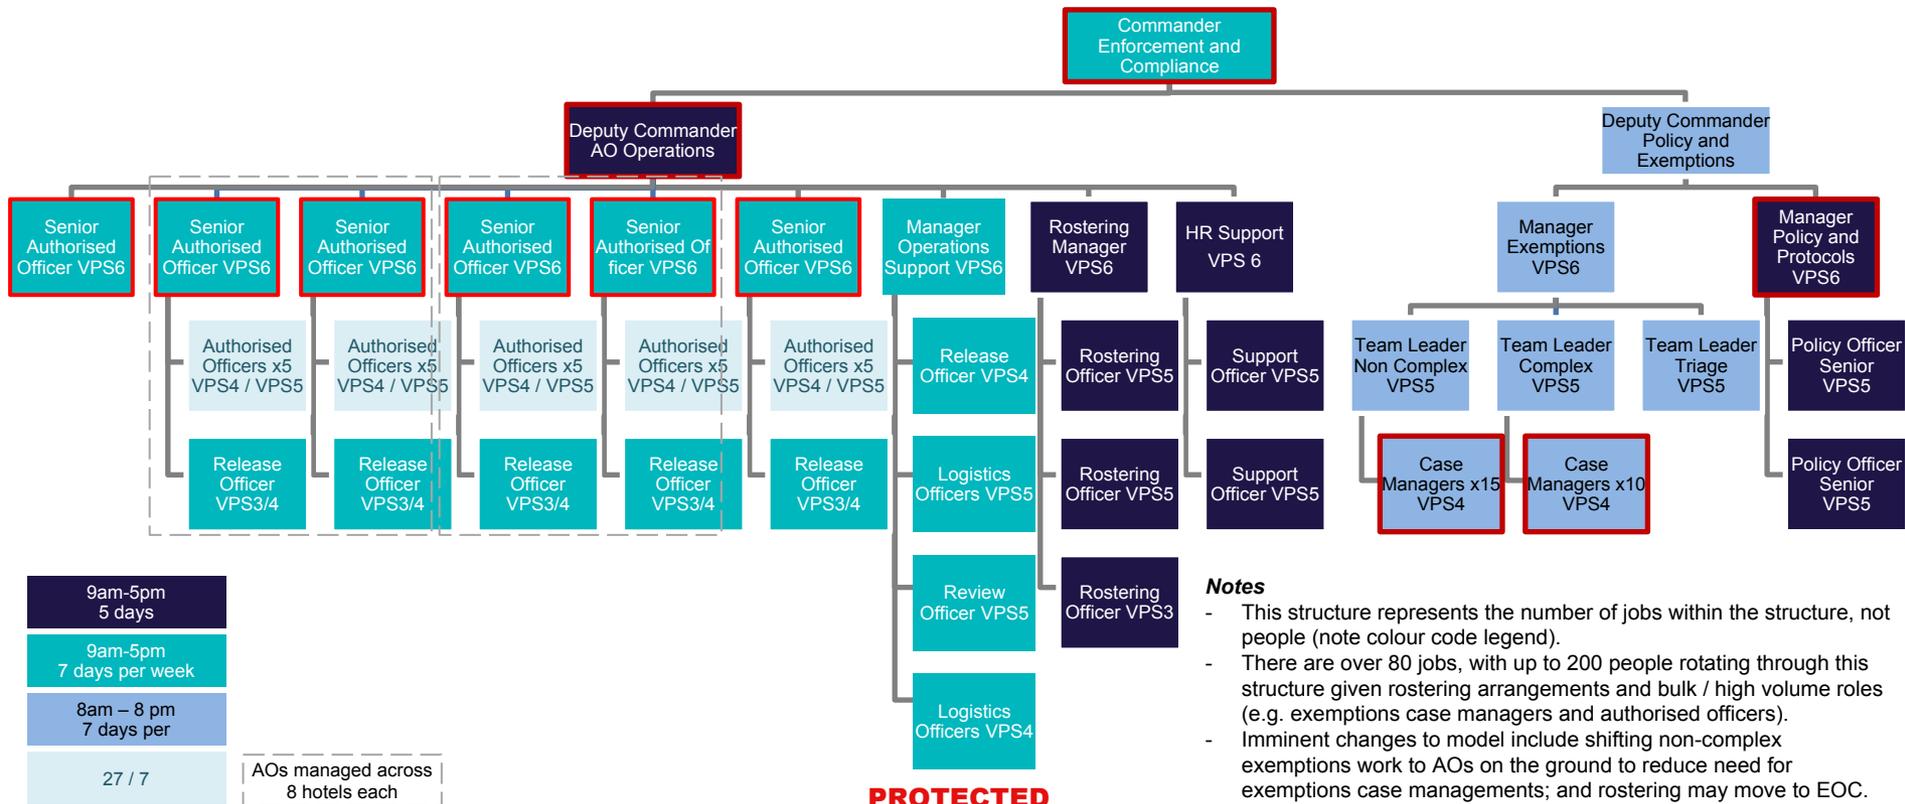

### Process

### Legislation

- Public Health and Wellbeing Act 2008 (PHWA)
- Sections 200(1) and 200(2) – (8) set out emergency powers and obligations
- Part 9 outlines general powers of Authorised Officers.
- s.183, s.188(2), s.193(1), s.203(1) set out infringements

# Enforcement and Compliance

## Detailed structure

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- There are over 80 jobs, with up to 200 people rotating through this structure given rostering arrangements and bulk / high volume roles (e.g. exemptions case managers and authorised officers).
- Imminent changes to model include shifting non-complex exemptions work to AOs on the ground to reduce need for exemptions case managements; and rostering may move to EOC.

# Enforcement and Compliance

## Workforce considerations

### Profile and high level issues

Structure includes a combination of bulk roles (Authorised Officers), generalist (administrative and corporate support) and specialist roles (exemptions and release officers).

Several rosters and up to 24/7 operations require high volume of FTE and associated issues (i.e. turnover, training etc.).

Predominant source of operational staff is existing RHPem staff (i.e. Human Services Regulator; Regulation and Reform; Health Protection) external (i.e. AOs from councils and government agencies) and other divisions (i.e. CSO; SCV).

Predominant source of program staff is existing agencies (i.e. case managers from Hays).

### Bulk versus individual roles

Executive roles overseeing operational and policy roles:

1. Commander (Meena / Murray)
2. Deputy Commander x2 (Anthony Kolmus Kolmus and **REDACTED** and Anna Peatt contract expiring)

Bulk roles performing both operational and operational policy roles:

1. AOs (team leaders, release officers, general support), sourced internally and externally
2. Exemption case managers sourced externally from Hays.

Generalist roles performing rostering, administration and corporate support:

1. Op policy roles from various sources
2. Rostering roles from Reg & Reform
3. HR and administrative support roles from RHPem (Standards and Regs)

### Sourcing challenges

Commander and deputy commander roles are executives from RHPem who are performing a dual role.

Case managers are not readily available and therefore sourced externally via Hays, noting there may be less need for them as non-complex exemption work moves to AOs on the ground.

AOs are sourced from various places and subject to fluctuating demand (e.g. people in hotels regularly changing).

Rostering approach duplicated across multiple functions.

Shadow corporate support functions established - should consider if these should be consolidated with others.

### Forecasted supply and demand

Internal EOs and AOs required to return to substantive positions in RHPem, coupled with anticipated shortages of external availability (e.g. as local councils resume their own regulatory functions, AOs will need to return).

# Enforcement and Compliance

## Key features of the structure and design considerations

### Function features

- Three executives overseeing the function.
- Heavy operational structure with focus on legislation.
- Embedded administrative support (i.e. HR rostering support).
- High level of redeployment of staff (i.e. AOs) across other emergency response functions.

### Design considerations

1. The Deputy Commander AO Operations has a large span of control and may not require some direct reports (e.g. rostering team could report to Manager Operational Support).
2. Potential for rostering function / capacity to be fully absorbed/provided elsewhere for scale to reduce temporary rostering roles in structure.
3. Rostering Team Leader is currently VPS6 given complexities and could transition to a VPS5.
4. While policy capability exists and is readily available, there is a gap in capability availability for operational policy design and development (i.e. guidelines, protocols etc.).
5. Dedicated corporate or logistics support, either within or across other COVID-19 response functions, could reduce the need for embedded corporate support roles.
6. Require an enduring structure to retain staff, reduce re-training for and increase consistency of specialised regulatory decisions and responses.

# Enforcement and Compliance

## Key issues to resolve

### Focus

Several design, workforce supply and demand and transition issues need to be addressed.

### Issues to be worked through...

1. The tension between emergency management response and global public health crisis has created governance issues as they relate to the accountability for enforcement and compliance function (i.e. there is some confusion about reporting lines and relationships to other emergency functions such as public health command, emergency management or RHPEM).
2. No regulatory capability framework that articulates the skills required and emerging gaps (e.g. there is arguably a lack of available operational regulatory policy capability i.e. strong policy exists but not required moving forward).
3. Need for consistent and dedicated corporate support (beyond access to mobility pool) to assist source/recruit, onboard and roster technical staff to eliminate shadow functions and focus on core business.
4. High volume of staff sourced from Regulation and Reform branch in RHPEM.
5. Fluctuating nature of demand for AOs and associated sourcing and retention challenges (i.e. reliance on external supply that will dry up as restrictions are lifted, short term nature of contracts, turnover and training impacts).

# Enforcement and Compliance

## Regulatory capability considerations (IPAA framework, 2015)

Assessing whether regulatory instruments or processes are continuing to meet their specified objectives.

### Make

- identification of a need to modify behaviours to achieve a policy goal that is best addressed by regulation
- the selection and application of the regulatory instrument(s), bearing in mind the compliance burden that is being imposed

### Operate

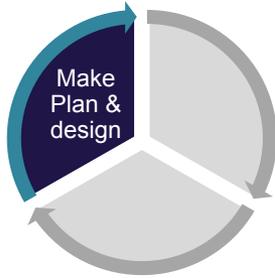

- information and education to raise awareness of the regulatory program and support regulated entities to comply with regulations
- the setting of standards
- application and/ or assessment processes
- stakeholder engagement in design and implementation
- monitoring of compliance
- enforcement of the law to address non-compliance

### Review

- evaluation of the regulatory program and its governance.
- following evaluation, implementation of any required changes to the regulatory framework or how it is administered
- periodic reassessment of whether the regulation is still appropriate to contemporary needs or if some alternative government intervention might be preferable

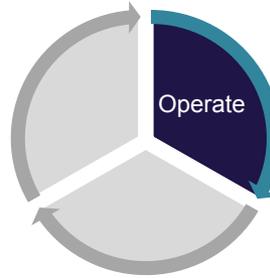

# Enforcement and Compliance

## Core capabilities for specific roles against IPAA regulatory framework

Roles: Lead Commander; deputy commanders; operational policy

- Identify the problem and options for an appropriate response
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

Roles: Team Leaders; Supervisors; Authorised Officers

- Process and operational policy design
- Managing Probity
- Making evidence based regulatory decisions
- Regulatory Information, intelligence and data management
- Resource planning
- Stakeholder management and education
- Complaints management
- Monitor compliance
- Responding to non-compliance
- Significant breaches and adverse events

Roles: Lead Commander; deputy commanders; operational policy

- Monitor and assess regulatory performance
- Adjust and improve ongoing regulatory performance
- Regulatory reform and review (with Public Health Command)

# Section 3

## Emergency Operations

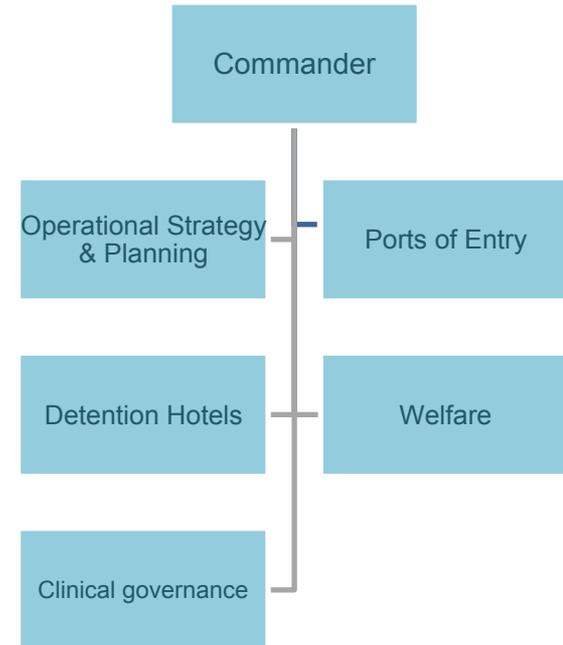

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and resourcing issues to resolve
6. Capability considerations

# Emergency operations

## Background

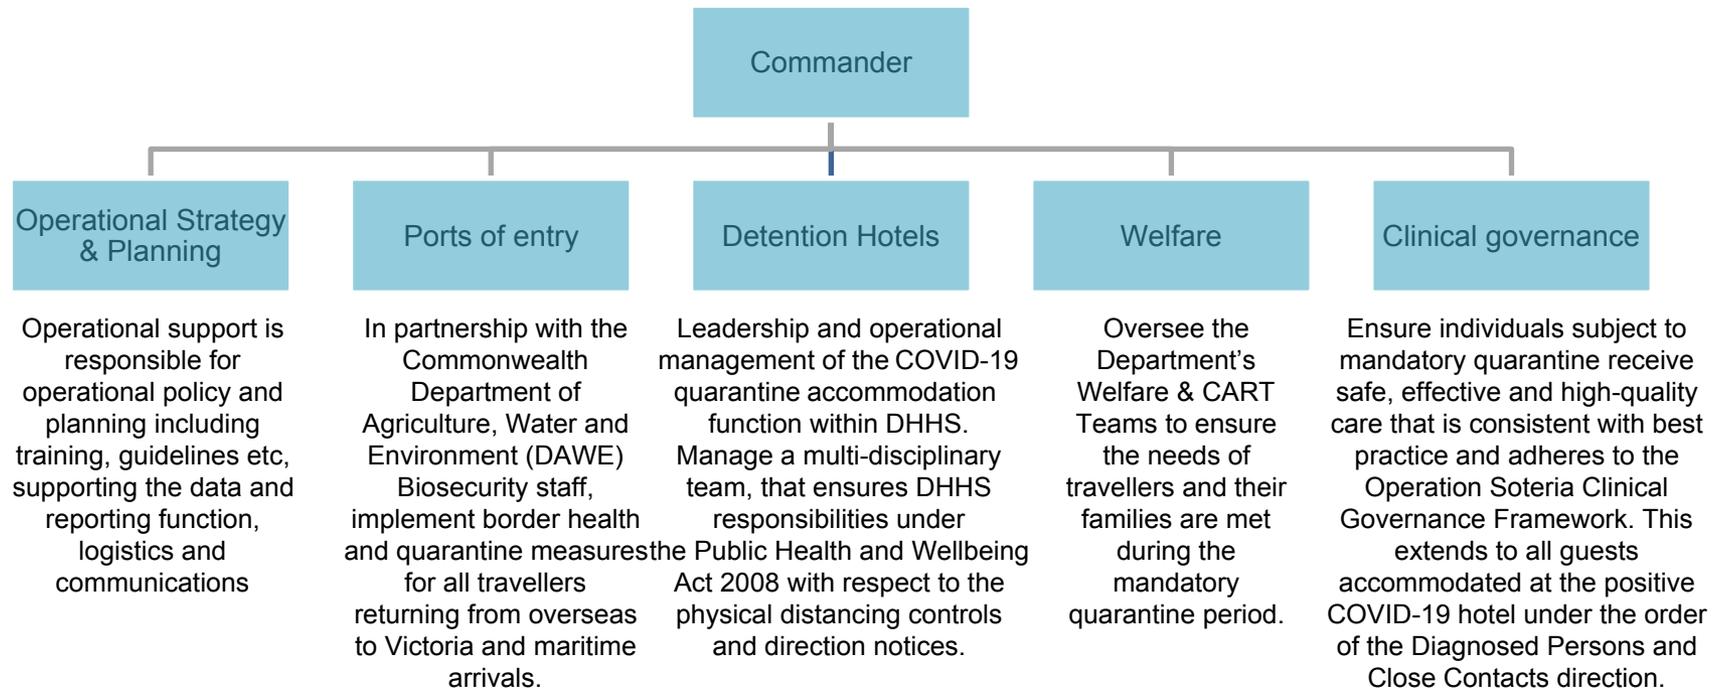

- Following the Australian National Cabinet direction that from 28 March 2020, all passengers returning from international destinations undergo 14 days enforced quarantine in hotels to curb the spread of COVID-19, Operation Soteria was established by the Victorian Government to achieve safe, authorised mandatory detention upon arrival into Victoria.
- The Emergency Operations Cell (EOC) led by the DHHS Commander COVID-19 Accommodation is responsible for:
  - Delivering secure quarantine accommodation to all overseas travellers and others assigned accommodation, in collaboration with DJPR, VicPol, DoT, DET, DPC, ABF, AFP
  - provision of welfare to individuals in mandatory quarantine (through the Deputy Commander Welfare);
  - ensuring the safety, health and wellbeing of individuals in mandatory quarantine and DHHS staff;
  - ensuring a safe detention environment at all times.
  - provision of healthcare to individuals in mandatory quarantine.
- An emergency accommodation structure has been stood up to support detention accommodation and ports of entry.

### *Functional structure*

# Emergency operations

## Functional structure and description

# Emergency operations

## Operating model components

- Teams is the predominant internal communication software being used to accommodate external stakeholders.
- Telephony and other conventional communication channels are used.
- The Compliance and Welfare Management System has three components – AOs use *Compliance Form*, Nurses use *Nurse Health Record* and Welfare staff use Welfare Management System.
- Data team to manage and oversee performance reporting data, data flows, audits and improvements

Technology

Channels

- ABF (Border force) re plane arrivals
- AFP and DoT and Vic Pol re transport and security
  - DJPR re hotels, security and transport
- CWMS for health and welfare reporting
  - Covid Directions email
  - Welfare Call Centre
- Covid Quarantine email

- Airport: Work with Biosecurity officer to ensure health check is performed; coordinate transport to hospital (as required); Issue airport arrival survey (to be filled in the bus
- Hotel at entry: Organise hotel check-in; collect airport arrival survey (and file); manage basic safety check.
- Hotel During Quarantine: daily health check (onsite nurse or via call); long welfare survey (within day 3); short welfare survey (day 9/10); referral to nurse or CART for escalation; complex assessment; development plan for complex cases); facilitate COVID-19 testing (Day 3 and 11); organise required medical services, e.g. medical practitioners, ambulance; respond to guest requirements and incidents
- Coordinate DJPR, VicPol, DoT, ABF, AFP to achieve program outcomes

Process

Legislation

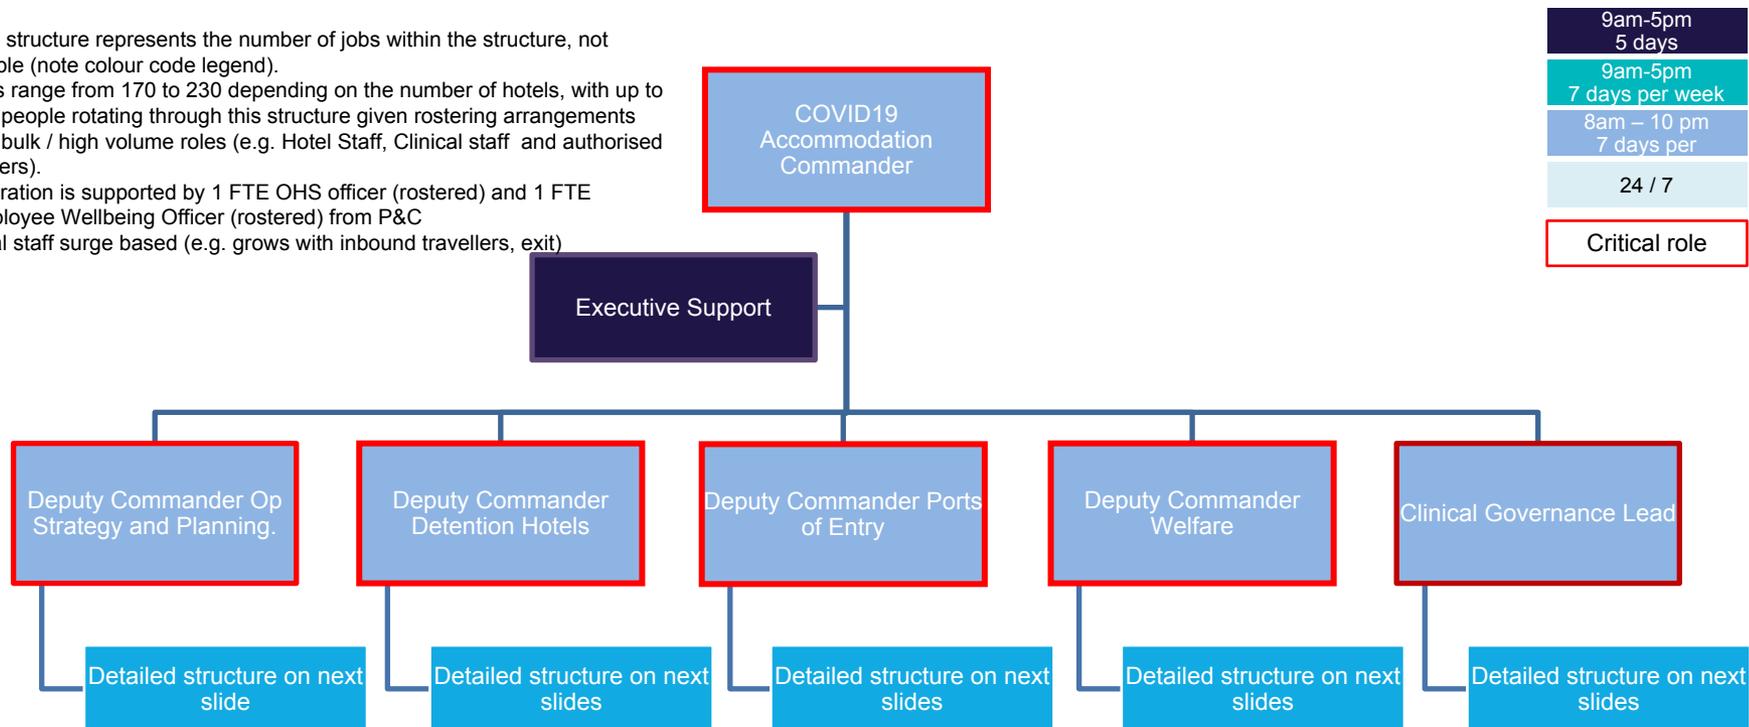

- Public Health and Wellbeing Act 2008 (PHWA)
  - Charter of Human Rights

# Emergency operations

## Overall structure

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- Jobs range from 170 to 230 depending on the number of hotels, with up to 400 people rotating through this structure given rostering arrangements and bulk / high volume roles (e.g. Hotel Staff, Clinical staff and authorised officers).
- Operation is supported by 1 FTE OHS officer (rostered) and 1 FTE Employee Wellbeing Officer (rostered) from P&C
- Total staff surge based (e.g. grows with inbound travellers, exit)

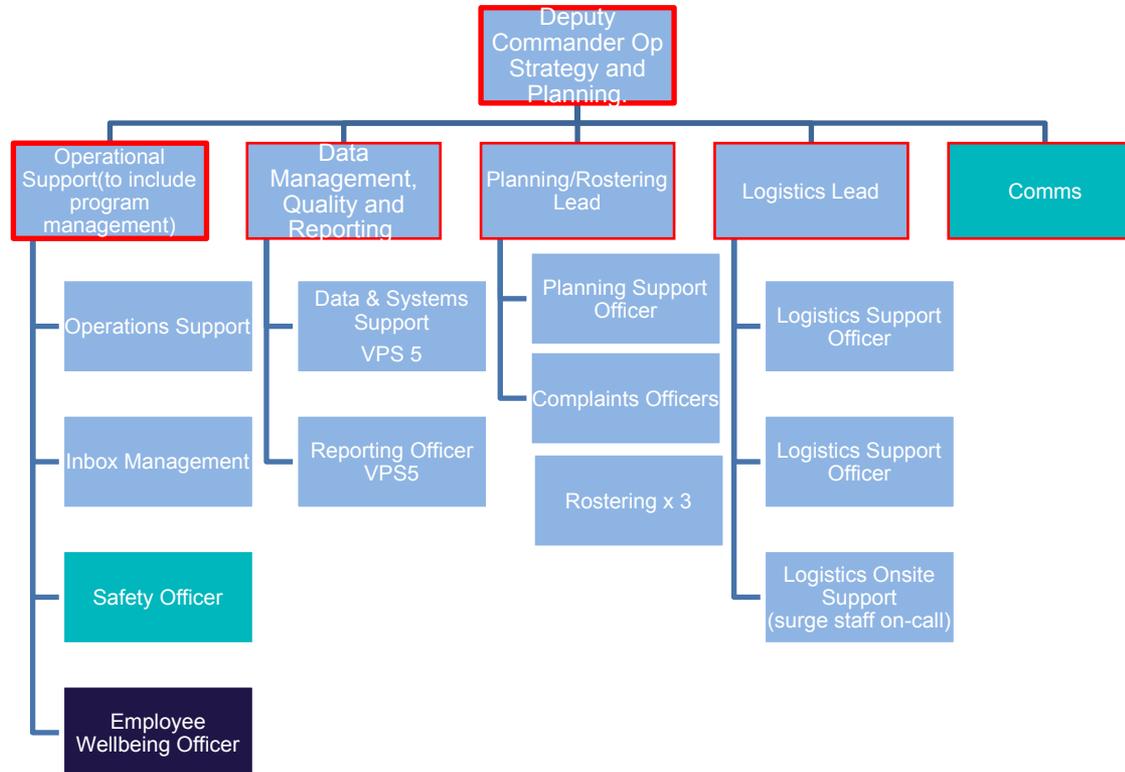

**PROTECTED**

# Emergency operations

## Operational Strategy and Planning detailed structure

### Notes

- Program management function currently in Welfare Cell will be transferred to this function.

|                            |

## Example of detailed matrix structure at hotel sites

### Notes

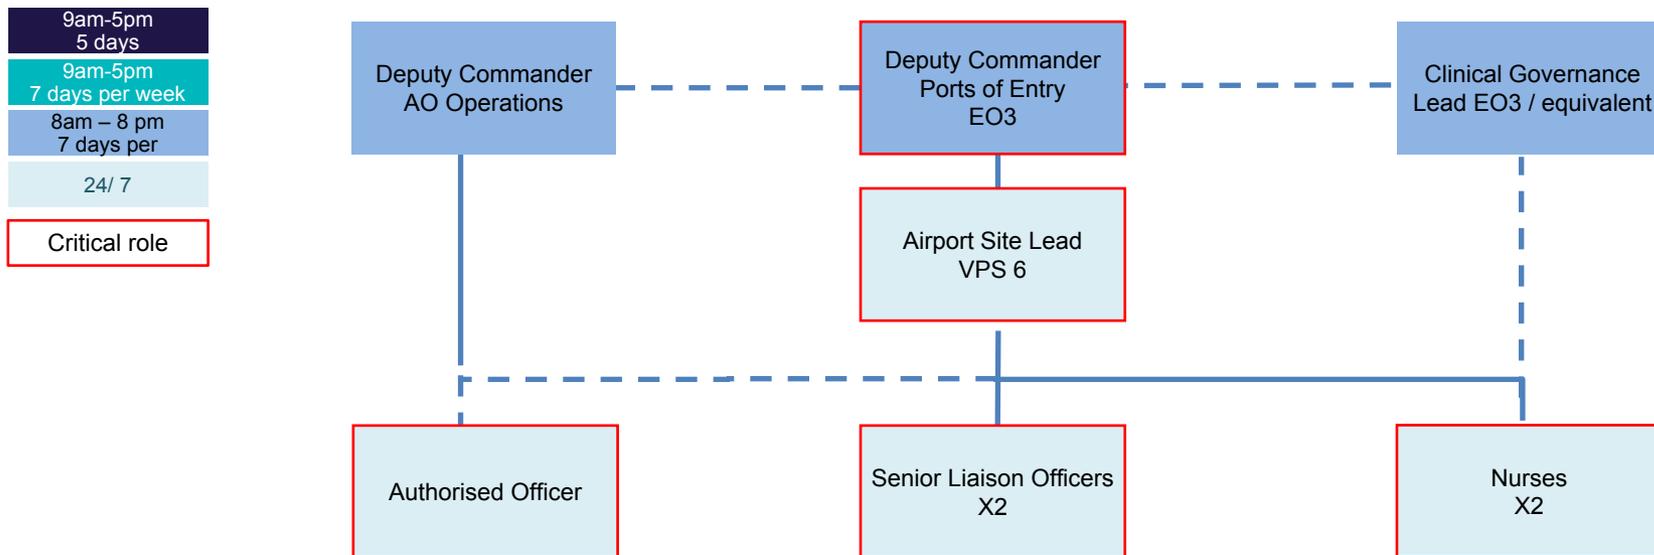

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- 10 – 16 Hotel sites (this surges or contracts as required) sit under the Dep Commander Hotels 10 roles per site range between 100 to 160 staff
- Hotel Site Lead manages matrix team and is point for day to day issues, and escalations.
- Representatives have clear roles, responsibilities and obligations under the Act or protocol.
- Exit Team Leader involves a roving role on lead up and on day of exit)
- The following is the average number of medical staff at a hotel site, noting this changes depending on the need:
  - 1 ED nurse per shift 7days a week
  - 2 general nurses
  - 1 Mental health nurse
  - 1 GP 8am to 6pm 7 days a week
  - 1 clinical lead (GP) telephone consultation
- Testing occurs at 3 to 4 hotels per day with a compliment 1 DHHS support officer per hotel and up to 12 testing team of 2 nurse and one personal care attendant .

**PROTECTED**

# Emergency operations

## Airport site detailed structure

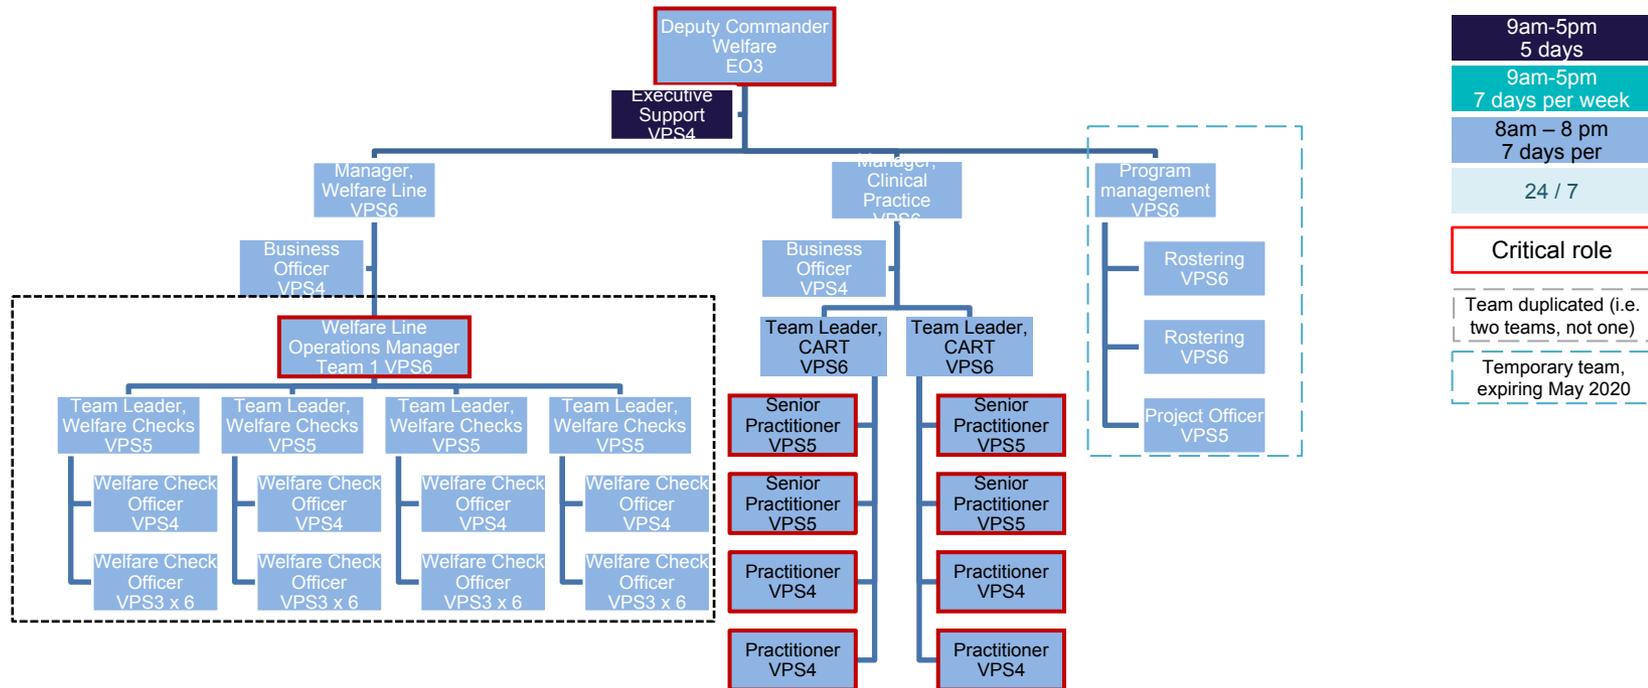

### Notes:

1. Moving towards this structure (i.e. Clinical Governance role is yet to be filled)
2. This structure surges demand including large flights, multiples flights arriving and transiting passengers. Same roles, increase people
3. Airport Site Lead manages matrix team of AOs, Medical Staff and DHHS staff on day to day issues ,escalates issues and provides support to on site team and reports to Deputy Commander Ports of Entry
4. Deputy Commander Ports of Entry manages day to day issues of the on site team including rostering in consultation with Deputy Commander AO Operations and Clinical Governance Lead
5. Deputy Commander AO Operations provides daily briefings to all AOs

# Emergency operations

## Welfare detailed structure

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- Approximately 100 staff rotate through this structure.
- Program management team to be picked up by Deputy Commander Op Strategy and Planning.

**PROTECTED**

# Emergency operations

## Workforce considerations

| Profile and high level issues  | Bulk v individual roles  | Sourcing challenges  | Forecasted supply and demand  |
|--|--|--|---|
| <p>Dynamic environment influences operational structures and models.</p> <p>Workforce includes a combination of bulk roles, generalist and specialist roles (clinical).</p> <p>There are different levels of rostered roles ranging from BAU to 24/7 operations that require high volume of FTE and associated issues (i.e. turnover, training etc.).</p> <p>Predominant source of Welfare Cell (i.e. phone line and CART function) are internal staff (i.e. mobility pool and critical skills register), but also external / volunteers (i.e. agency and causals). Airports are predominantly Operational Division and Hotels include internal (i.e. mobility pool) and VPS departments (e.g. DET and DJPR).</p> <p>Program management support staff are from CSOD, due to return in May.</p> | <p>Executives overseeing operational roles:</p> <ol style="list-style-type: none"> <li>1. Commander (Pam / Merrin)</li> <li>2. Deputy Commander x 3 (Michael MefflinEO3, Colleen Clark/Anita Morris, Sandy Austin/Melody Bush)</li> </ol> <p>Bulk roles performing operational roles:</p> <ol style="list-style-type: none"> <li>1. CART practitioners</li> <li>2. Welfare calls to hotels (outbound only)</li> <li>3. DHHS support at hotels (e.g. site lead)</li> </ol> <p>Generalist roles performing rostering, administration and corporate support:</p> <ol style="list-style-type: none"> <li>1. Program support, including rostering (from CSO)</li> </ol> <p>Specialist roles performing clinical support and complex assessments:</p> <ol style="list-style-type: none"> <li>1. Senior practitioners and clinical roles in both CART and site operations.</li> </ol> | <p>The EOC is staffed predominantly by Ops EM and Operations EM surge staff. All Ops EM Directors are working in EOC and covering their own BAU.</p> <p>Practitioners are at risk of depleting critical resources in OPP and CSO more broadly. Program support that is typically based in CSOD is in high demand, but at risk of depleting CSO functions.</p> <p>Rostering approach duplicated across multiple functions</p> | <p>Supporting rostering and consolidating program support functions important to reduce reliance on CSO functions in medium term.</p> |

# Emergency operations

## Key features and design considerations

### Function features

- There are several (TBC) executive positions overseeing the function, although, multiple executives rotate through given operational requirements.
- Regularly accommodate surge and contraction with very tight time frames.
- Work with integrated teams to support on the ground operations.
- Responsible for end to end welfare from airport to hotel, to ongoing social supports.

### Design considerations

1. Span of control for a medium term response needs to be considered in the structure (current structure represents an immediate emergency response need to rethink the structure and governance that considers the response will be longer but still time limited – therefore integrated response).
2. Clinical Governance role needs refinement (i.e. incorporate clear oversight and secondary consultation and escalation role for clinical staff).
3. Need for communications capacity to work closely with other emergency response functions (e.g. enforcement and compliance BAU) and assist inter-agency operations.
4. Dedicated corporate or logistics support, either within or across other COVID-19 response functions, could reduce the need for embedded corporate support roles. Alternatively, the rostering function could be supported by, or consolidated with Public Health Command).
5. Call centre and communications outbound and inbound need to be reconsidered (greater integration of broader info lines)
6. Data management and quality and reporting needs to be improved across the program

# Emergency operations

## Key tensions to resolve

| Focus  | Items to be worked through...  |
|--|--|
| <p>Several design, workforce supply and demand and transition issues need to be addressed.</p> <p>There is a particular focus on decision making processes and governance need to accommodate an interim, complex response</p> | <ul style="list-style-type: none"> <li>• Complexity working in a matrix model in an operational emergency response 'on the ground' (i.e. this is not an ideal model for an emergency); and developing an interim response that is a hybrid of emergency and BAU</li> <li>• High volume of staff sourced from BAU functions, including emergency management staff from all Operations Divisions and central, program management, clinical and practitioner staff from CSO, balanced with an operation that faces frequent surge/contraction.</li> <li>• Clarity of roles, relationships, governance and indirect impact of existing functions (e.g. the State Health Coordinator) and new functions such as 'hotel for hero'.</li> <li>• Impact of policy and regulatory decisions that change client volume and operating models as we transition from response to recovery (i.e. impact of state of emergency, second wave responses etc.).</li> <li>• Potential to maximise value of call centre function by grouping some on site and strengthen relationship with DJPR (note this would require different capability); and exploring opportunities for integration and interaction with other DHHS call centre functions.</li> <li>• Resolve issues relating to the spread of data accountability and custodianship across emergency response functions and resource accordingly (currently, EOC are managing welfare issues and E&amp;C are managing their regulatory issues).</li> </ul> |

## Public Health Command

1. Background
2. Operating model insights
3. Structures
4. Workforce considerations
5. Design considerations and tensions to resolve
6. Capability considerations

# Public Health Command: Background

- As of 16 April 2020, National Cabinet has indicated an intention to pursue necessary public health action to minimise the impact of COVID-19.
- The establishment of the Public health Command Structure sets policy, operational policy and manages public health operations to effectively:
  - Reduce introduction of new cases from overseas
  - Find every case of COVID-19 through contact tracing
  - Ensure suspected and confirmed cases are rapidly isolated
  - Effectively manage outbreaks of COVID-19
  - Reduce community transmission
  - Protect population groups who are most vulnerable to complications of COVID-19 by:
    - Safeguard the provision of healthcare within the health system
    - Mitigate societal and economic harms from interventions to prevent COVID-19
  - Prepare to vaccinate the population against COVID-19 (when available)

# Public Health Command

## Functional structure and description

### Notes:

- Office staff and structures are not included in scan
- The Public Health Emergency Operations and Coordination function is not shown here, but included in scan

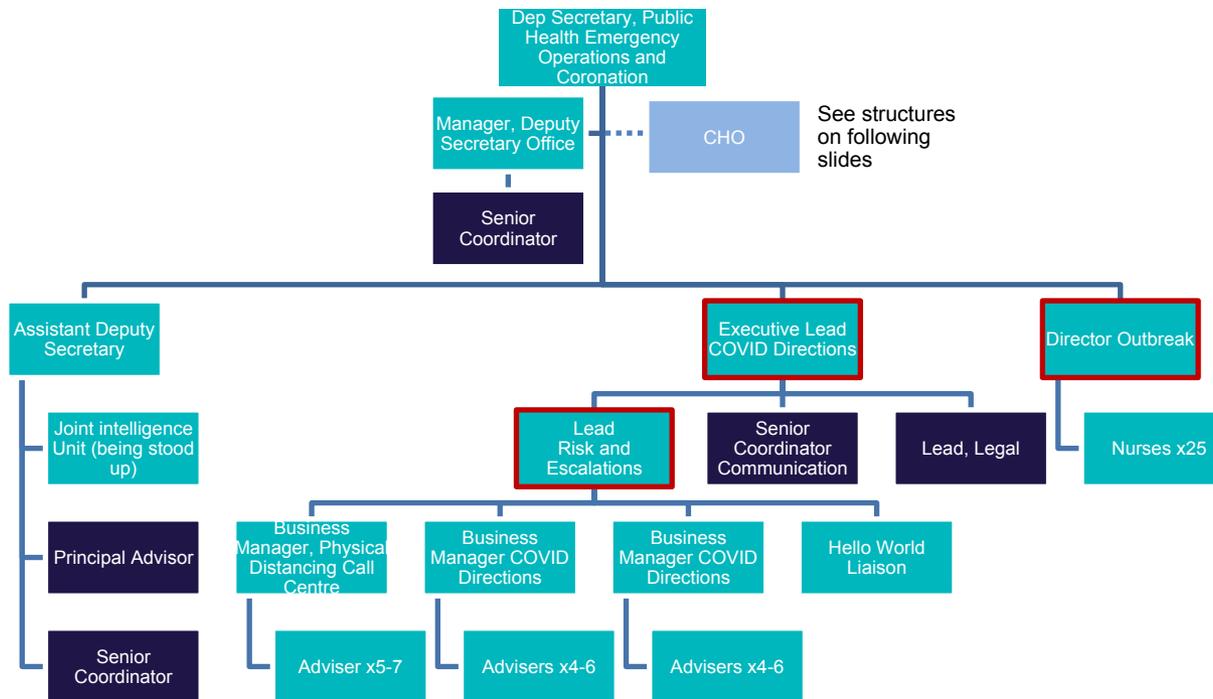

# Public Health Command

## Public Health Emergency Operations and Coordination

### Notes

- Excluding structures below the CHO, there are approximately 30 jobs, plus nurses, excluding new intelligence function. Up to 70 staff rotate through this structure
- Outbreak team currently being stood up.
- Joint intelligence unit is currently being stood up and will draw on existing intelligence unit.
- Up to 25 nurses are sourced from various places.
- Critical need for resources under COVID Directions as Hello World contract continues to be reviewed.
- Additional capacity to support whole go government work is being considered under COVID Directions.

7 days per week

8am – 10pm  
7 days per

24 / 7

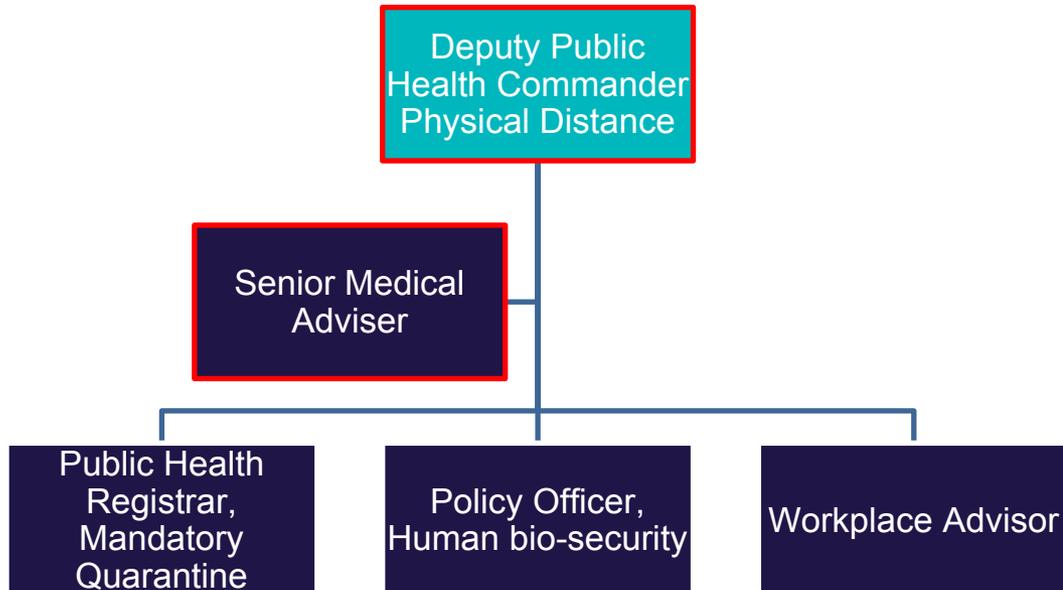

### Notes

- This structure represents the number of jobs within the structure, not people (note colour code legend).
- Overall structure involves approximately 90 jobs.
- ~80 of these jobs are in Cell 1 and 2, although, ~190 staff rotate through these roles given the rostered nature. Generally these roles are sourced via DHHS/VicGov (e.g. ~16 staff in Team Leader roles are from RHPem) (i.e. HP CDPC) and others are filled via external agencies (e.g. Cabrini).
- Medical advice line is shared 1 day per person from Strategy team.

# Public Health Command

## Workforce considerations

| Profile and high level issues   | Bulk v individual roles   | Sourcing challenges  | Forecasted supply and demand  |
|---|---|--|---|
| <p>Structure includes a combination of bulk roles (epidemiologist, intelligence surveillance, informatics, investigations), generalist (coordination and logistics) and specialist roles (medical practitioners on information lines).</p> <p>Up to 24/7 operations require high volume of staff and creates complex workforce arrangement (i.e. rostering, turnover, training etc.).</p> <p>Predominant source of operational staff is from Health Protection (epidemiologist, environmental health officers from communicable diseases and other areas) and Prevention and Population Health.</p> <p>There is considerable agency hire and from hospitals (e.g. nursing staff) and VISA appointments.</p> | <p>Executive roles overseeing operational and policy roles:</p> <ol style="list-style-type: none"> <li>1. Several executives (Simon, Kira, Bruce, Fin, Nicole, Katherine and AvD).</li> </ol> <p>Bulk roles performing both operational and operational policy roles:</p> <ol style="list-style-type: none"> <li>1. Epidemiologist</li> <li>2. Disease surveillance</li> <li>3. Case contact and tracing officers</li> <li>4. Data and informatics</li> <li>5. Physicians, nurses, GPs</li> </ol> | <p>Several executives who normally provide BAU leadership in RHPEM are 100% dedicated to the PHC.</p> <p>The supply line from other Victorian Government agencies, health services, universities, local councils (e.g. AOs') is likely to reduce as restrictions are lifted.</p> <p>BAU staff from RHPEM and across the department and VPS have been drawn on to support COVID-19, although, continue to have BAU commitments which create a gap and organisational risk.</p> <p>AOs are sourced from various channels and subject to fluctuating demand, as well as necessary onboarding delays (e.g. screening).</p> | <p>Even short term COVID-19 response is assumed to be months, therefore there are considerable BAU risks and sourcing challenges ahead (highlighted in sourcing challenges).</p> <p>A paper submitted to the Missions Coordination Committee (21 May 2020) outlines workforce pressures, highlighting how contact tracing, infection prevention and control and outbreak squads will grow considerably. It explains how there will be continued demand for data interpretation and reporting skills, project managers and officers, communications staff, and other logistics and business support.</p> |

# Public Health Command

## Key features and design considerations

| Focus   | Items to be worked through...   |
|---|---|
| <ul style="list-style-type: none"> <li>• Large and growing workforce with several rostering requirements to meet varying operational needs.</li> <li>• Workforce source is combination temporary 'lift and shift' of DHHS functions, individual secondments or assignments and external agency hire (health service and generalist).</li> </ul> | <ol style="list-style-type: none"> <li>1. Urgent role design and work value assessment to be undertaken to inform recruitment strategy and pipeline management. Risks exist where substantive roles are not being filled in many of the teams (e.g. staff in the Pathology and Infection Prevention and Control team) and also the placement of people in roles that they are not suited to.</li> <li>2. High operational workforce has lower level classified roles and staff. On balance, the volume and ratio of senior to junior roles is low (i.e. arguably not enough senior staff at VPS5, VPS6 and executive level, particularly given the profile of the work and ministerial interaction).</li> <li>3. There is limited support for executive, ministerial, budget management and coordination support for each public health commander (particularly the 2-3 areas with high volumes of staff).</li> <li>4. Confirmation of placement of outreach function (was being established in the Pathology and Infection Prevention and Control team).</li> <li>5. Profile and future focus on Outbreak Response in Case, Contact and Outbreak Management may need to be elevated to the report to the deputy commander role.</li> <li>6. Reporting lines for management in the Physical Distancing Hotline need to be clarified and embedded, with consideration to the public health significance of this pandemic.</li> </ol> |

# Public Health Command

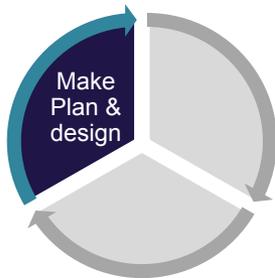

## Key tensions to resolve

| Focus   | Items to be worked through...   |
|---|---|
| <p>Several design, workforce supply and demand and transition issues need to be addressed</p> | <ul style="list-style-type: none"><li>• The tension between emergency management response and global public health crisis has created governance issues as they relate to the accountability for enforcement and compliance, operations and public health response, including some confusion about accountabilities and reporting lines</li><li>• Timing and tenure of individual roles and appointments remains unclear for individuals, creating business risk (e.g. retention) and personal risk (e.g. uncertainty).</li><li>• Decision to resource and/or expand rostering support / teams to other emergency response teams.</li><li>• Urgency for a dedicated workforce plan that considers supply management, noting the concern that availability of workforce from agency hire, hospital, students and other external sources (including AOs) will reduce as restrictions are lifted (i.e. people go back to their day jobs). This will also create risks associated with turnover (e.g. retraining, business continuity etc.)</li><li>• High volume of staff from Health Protection in RHPem creating a BAU risk.</li><li>• Technical nature of some roles not readily available through existing supply lines (e.g. Critical Skills Register leading to reliance on external agency hire). This includes epidemiologist, lab staff etc.</li><li>• Some capability / skill / content gaps in policy development (e.g. in the Physical Distancing team).</li></ul> |

# Public Health Command

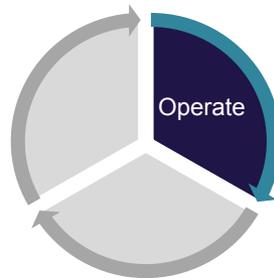

## Core capabilities in regulatory cycle

Description of roles and functions that fit within each part of the regulatory cycle TBC by PHC.

Functions/roles: TBC

- Identify the problem and options for an appropriate response
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

Functions/roles: TBC

- Process and operational policy design
- Managing Probity
- Making evidence based regulatory decisions
- Regulatory Information, intelligence and data management
- Resource planning
- Stakeholder management and education
- Complaints management
- Monitor compliance
- Responding to non-compliance
- Significant breaches and adverse events

Functions/roles: TBC

- Monitor and assess regulatory performance
- Adjust and improve ongoing regulatory performance
- Regulatory reform and review

# Appendices

## Supporting information

1. Job cards
2. Stakeholders engaged

# Job Cards

## Enforcement and Compliance

# Job card - Commander Enforcement and Compliance

## Accountabilities

- Overall leadership and management of the COVID-19 enforcement and compliance function within DHHS, including oversight of compliance matters under all public health directions, recruitment, management and occupational health and safety.
- Overall stewardship for COVID-19 enforcement and compliance legislation, protocols and data pertaining to enforcement and compliance matters.
- Provide authoritative advice and input into complex compliance matters, including support to the Chief Health Officers and delegates on compliance and enforcement related matters.
- Conduct daily review of those subject to detention and provide advice and guidance on necessary actions to be taken.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, emergency operations, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational compliance policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance compliance, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact compliance policy and operations.

## Capabilities

- Identify regulatory problem and set out options for appropriate response.
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

## Specialist expertise

- Senior level experience in government regulatory policy development and implementation, contemporary regulatory practice and translation of legislative into operational effectiveness.
- An understanding of the Victorian health and human services system and associated regulation.
- Proven experience operating within a rapidly changing environment, so we need to marry.

# Job card – Deputy Commander AO Operations

## Accountabilities

- Overall leadership and delivery of regulatory operational function as it relates to the departments COVID-19 enforcement and compliance response.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, emergency operations, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational compliance policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance compliance, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact compliance policy and operations.

## Capabilities

- Identify regulatory problem and set out options for appropriate response.
- Regulatory design - application of regulatory theory to achieve a particular policy outcome
- Stakeholder engagement and relationship management
- Design strategies to support compliance and address non-compliance

## Specialist expertise

- Senior level experience in government regulatory policy development and implementation, contemporary regulatory practice and translation of legislative into operational effectiveness.
- An understanding of the Victorian health and human services system and associated regulation.
- Proven experience operating within a rapidly changing environment, so we need to marry.

## Job card – Senior Authorised Officer (e.g. Team Leader)

### **Accountabilities**

- Lead a multi-disciplinary team, that ensures DHHS responsibilities under the Public Health and Wellbeing Act 2008 with respect to the physical distancing controls and directions are delivered effectively, efficiently and that any issues are escalated appropriately.
- Hotel cell: Ensure passengers/guests/client are compliant with detention notices and physical distancing policies; Detention notices are updated as required; Manage transfers requests to leave, and exit process and protocols; Escalate issues.
- Airport cell: Ensure passengers are served detention notices lawfully; compliant with detention notices and physical distancing policies; and triaged and transported appropriately.
- Release AOs: Carry out the release process for releasing people from quarantine.

### **Capabilities**

- Team supervision
- People management skills

### **Specialist expertise**

- Working knowledge of the Public Health and Wellbeing Act 2008 with respect to the physical distancing controls and directions

# Job card – Manager Policy and Protocols (VPS6)

## Accountabilities

- Provide high quality business intelligence, authoritative advice and sound policy recommendations to senior management and government based on comprehensive research.
- Oversee the development of policy and initiatives that meet government and departmental objectives within resourcing, timeline and budget parameters.
- Review and report on high priority issues, risks and trends and prepare and present comprehensive reports, ministerial briefs and cabinet and agency submissions on complex issues.
- Pro-actively build and maintain effective working relationships and facilitate the flow of information across the department and with key external stakeholders.
- Maintain an understanding of Commonwealth and State legislative and policy reform directions to influence policy development.
- Represent the department on key stakeholder committees and groups concerned with achieving government and departmental objectives, lead relevant committee and governance processes.
- **Keep accurate and complete records of your work activities in accordance with legislative requirements and the department's records, information security and privacy policies and requirements.**
- **Take reasonable care for your own health and safety and for that of others in the workplace by working in accordance with legislative requirements and the department's occupational health and safety (OHS) policies and procedures.**
- **Demonstrate how the actions and outcomes of this role and work unit impact clients and the department's ability to deliver, or facilitate the delivery of, effective support and services.**

## Capabilities

- Team supervision
- People management skills

## Specialist expertise

- A tertiary qualification in fields related to emergency management, community services, health administration or business management would be desirable.

# Job card – Exemptions

## ***Team Leader Complex***

- Oversee the day to day work of the Case Managers (Category 2): provide direction and guidance to case managers, review evidence, ensure quality of advice and briefs to support senior executive decision making.
- Manage complex and sensitive liaison with multiple parties.
- Alert Manager, Exemptions to any issues of risk, particularly relating to the welfare of people in quarantine, and including resource management and rostering issues.

## ***Team Leader Non Complex***

- Oversee the day to day work of the Case Managers (Category 1): provide direction and guidance to case managers, review evidence, ensure quality of exemption letters and advice and briefs to support senior executive decision making, escalate issues to Manager as appropriate, ensure consistency and timeliness of urgent matters.
- Alert Manager, Exemptions to any issues of risk, including resource management and rostering issues.

## ***Both***

- Work creatively and analytically in a problem-solving environment demonstrating teamwork, innovation and excellence.
- Provide leadership and motivate case managers to meet team goals, adhering to their responsibilities and milestones.
- Work collaboratively with other Team Leaders to support the shared objectives of the Exemptions team and broader Compliance Cell.

## **Capabilities**

- People management and/or team leader experience desirable
- Strong people skills in challenging, high volume and fast paced environments.
- Excellent attention to detail and time management skills with the ability to multi-task.
- Problem solving skills.
- Good written and verbal communication skills (experience in having difficult conversations and/or delivering difficult information would be desirable).

## **Qualifications**

- A tertiary qualification in policy, law or business, or in fields related to emergency management, community services, health administration or business management.

# Job Cards

## Emergency Accommodation

# Job Card – Commander, Operation Soteria

## Accountabilities

- Overall leadership and management of the COVID-19 detention accommodation & ports of entry functions within DHHS, including oversight of strategy, health & wellbeing of detained people, operational matters, recruitment, management and occupational health and safety.
- Coordination and approval of operational policy & standard operating procedures pertaining to Operation Soteria.
- Provide authoritative advice and input into complex emergency operations matters.
- Work collaboratively with all internal stakeholders, including public health, legal, welfare, health and wellbeing, enforcement and compliance, logistics, housing and communications.
- Work collaboratively and liaise with external stakeholders to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, DFAT, other jurisdictions as required.
- Develop, set, review and approve operational policy to ensure operational effectiveness.
- Provide strategic thinking and future planning and oversee change management initiatives to enhance the emergency operation, while maintaining situational awareness of wider policy and operational changes in the short to long term that may impact operations.
- Oversee data quality, management, quality assurance and reporting

## Capabilities

- Proven senior executive experience operating within a rapidly changing environment.
- Demonstrated experience in managing a multi disciplined workforce.
- Outstanding communication skills and the ability to foster relationships with partner stakeholders.

## Specialist expertise

- An understanding of the Victorian health and human services system, legislation, policies and associated regulation.
- Demonstrated experience in working in an Emergency Operations Centre or supporting an emergency event.
- Government Services delivery and leadership experience.

# Job Card - Deputy Commander, Hotels

## Accountabilities

- Leadership and operational management of the COVID-19 quarantine accommodation function within DHHS.
- Manage a multi-disciplinary team, that ensures DHHS responsibilities under the *Public Health and Wellbeing Act 2008* with respect to the physical distancing controls and direction notices are adhered.
- Provide oversight and quality assurance mechanisms to deliver high quality, safe and effective care to persons in mandatory quarantine.
- Active consultation with the Deputy Commander, Welfare and Clinical Governance Commander to ensure care provided to passengers is safe, appropriate and represents best practice within the clinical governance framework.
- Promotes safety leadership to ensure the health and wellbeing of DHHS staff, and staff from other agencies contracted who are undertaking activity at the hotel.
- Lead the development of operational policy & standard operating procedures pertaining to Hotel Accommodation.
- Provides the Commander, Operation Soteria with situational awareness and intelligence to inform emerging issues and appropriate risk management.
- Provide authoritative advice and input into complex welfare and human service matters.
- Work collaboratively with all stakeholders to ensure all optimal outcomes for guests in mandatory quarantine.

## Capabilities

- Proven experience operating within a rapidly changing environment.
- An ability to work in high emotion environment.
- Manage a multi-disciplined team.

## Specialist expertise

- An understanding of the Victorian health and human services system, legislation, policies and associated regulation.
- Experience in working within a Clinical Governance Framework.
- Government Services delivery and leadership experience.

# Job Card - Deputy Commander, Ports of Entry

## Accountabilities

- In partnership with the Commonwealth Department of Agriculture, Water and Environment (DAWE) Biosecurity staff, implement border health measures for all travellers returning from overseas to Victoria.
- Oversee the adherence and enforcement functions and procedures for the direction and detention for Airport and Maritime Arrivals issued under *the Public Health and Wellbeing Act 2008*.
- Oversee the logistics of travellers that arrive at Victorian airports and maritime ports to their designated quarantine hotel.
- Oversee the implementation of Exemptions to the General Quarantine Policy for transitional passengers.
- Support the Commander, Operation Soteria participate in the *Managing Returns to Australia Working Group*.
- Lead the development of operational policy & standard operating procedures pertaining to Ports of Entry.
- Provide authoritative advice and input into complex matters to ensure the health and safety of travellers.
- Work collaboratively and liaise with external stakeholders at the Airport to ensure multi-agency preparedness and responses, including DJPR, VicPol, ABF, AFP, DAWE, AV DFAT, DoT, Airport Chaplain and other jurisdictions as required.

## Capabilities
